DRAFT — NOT AS-BUILT — LIVE CLOSEOUT GATES PENDING

# Town Expansion
# *Draft PM Dossier*

The complete 28 July program record: frozen scope, research and source-of-truth decisions, engineered coordinate schedules, citizen operations, entity and deployment gates, database contract, 13-map evidence book, exact-object screenshot crosswalk, requirements matrix, and PM closeout controls.

DRAFT · NOT AS-BUILT

**Publication state**
DRAFT · NOT AS-BUILT

**Frozen scope**
98 requirements · no scope reduction

**Evidence design**
340 exact objects · 1178 paired captures

**Review book**
13 maps · 12 representative exact-object screenshots · 59 source reports

# Draft evidence readiness

**Draft preparation only. No final/as-built claim is authorized.**

| Gate | Result | Evidence/status |
|---|---|---|
| Canonical compiler report, ownership manifest and forward package exist and agree | **PASS** | `{"designReport":"data/buildops/town-expansion-r1-2026-07-28.report.json","ownershipManifest":"data/buildops/town-expansion-r1-2026-07-28.manifest.json","forward":"data/buildops/town-expansion-r1-2026-07-28.txt","forwardSha256":"1a10954b1ae6ae702dcc01cd92d39adbb3820e3feff5461f3caa1283a578b896"}` |

# July 28 World Program — Session PM Dossier

Document ID: `REDEV-2026-07-28-SESSION-PM-01`
Date: 2026-07-28 UTC
Prepared from: repository artifacts, immutable snapshot records, transaction ledgers, QA reports, database ledgers, Sites records, and a read-only Box audit
Current state: **LIVE DOCUMENT — R1 AND WAVE 2 ACCEPTED; TOWN EXPANSION GENERATED OFFLINE; LIVE TRANSACTION BLOCKED; FINAL PDF/BOX CLOSEOUT PENDING**

---

# 1. Document control

## 1.1 Purpose

This dossier is the program-management review spine for all evidenced work performed during the July 28 UTC operating window. It is designed to answer:

- what was requested;
- what was measured;
- what was designed;
- what was built;
- what was independently verified;
- what entered the database;
- what was published;
- what is locally staged for Box;
- what remains in progress;
- what evidence is required before the current town expansion may be called complete; and
- how every important claim can be traced to a machine artifact and hash.

It does not contain private model reasoning or reconstruct unrecorded conversation. “All sessions” means all work sessions that left evidence in the workspace, the accepted release records, the Sites project, or the configured Box destination.

## 1.2 State vocabulary

Every package in this dossier uses one of the following states:

| State | Meaning |
|---|---|
| Requested | The owner asked for the outcome. No design claim is implied. |
| Surveyed | Existing conditions were measured from a named source. |
| Researched | External standards or precedents were reviewed. |
| Designed | A spatial/program response exists. |
| Generated | Forward/rollback or media artifacts exist offline. |
| Preflighted | Exact source guards and package contracts pass offline. |
| Committed | A live transaction ledger records success. |
| Verified | Independent post-state, rollback, movement, and evidence gates pass. |
| Imported | Accepted features/observations were atomically entered in the database. |
| Published | A saved Sites version is in production and healthy. |
| Box-verified | Remote paths and hashes match the final local handoff. |

No earlier state silently implies a later one.

## 1.3 Program boundaries

The dossier covers four July 28 sequences:

1. closeout and publication of accepted Redevelopment R1;
2. design, atomic delivery, and acceptance of Redevelopment Wave 2;
3. publication of Wave 2, diagnosis of the Sites Worker failure, and version 4 runtime repair; and
4. the current Ravensreach/town-to-stadium expansion program.

Box handoff must be appended from accepted evidence rather than anticipated.

# 2. Executive program summary

## 2.1 Accepted work entering this expansion

R1 and Wave 2 are accepted, distinct releases:

| Release | Physical scope | Acceptance | Database result | Publication |
|---|---|---|---|---|
| `REDEV-2026-07-27-R1` | Five coordinated packages: Raven Rock S1, C01 recessed portal, MainStreet R4/R5 garages/alleys, B02/B03 public realm, Westlight screen | 5/5 packages, 36,781 target cells, 22 routes / 44 directions, 91 post images, 7 maps | 824 features / 21 scans / 1,830 observations | Sites v1, then documentation rollup v2 |
| `REDEV-2026-07-28-R2` | Raven Rock T2b dry liner and MainStreet R08 cross-link | 2/2 packages, 887 explicit plus 2 reactive cells, 2 routes / 4 directions, 14 matched cameras | 875 features / 23 scans / 1,881 observations | Wave 2 Sites v3 failed at runtime; bundled Worker fix published as v4 |

Wave 2 also delivered 79 unique target-valid images: 55 building perspectives and 24 circulation perspectives. All 69 registered buildings had an exact screenshot and exact floor plan in the accepted Wave 2 catalog. These are coverage facts at the Wave 2 boundary; the current expansion adds new objects that must receive new database and media relations.

## 2.2 Current town-expansion objective

The current program is materially larger than a cosmetic pass. It combines:

- conversion of every residential garage to a true attached garage, with attached four-car or six-car garages for every large house;
- completion/redesign of the town building penthouse;
- replacement of the Amsterdam-style buildings with a period-compatible longhouse and designed courtyard;
- a fourfold library expansion;
- a two-level walk-out concrete terrace descending from the library to the pavilion;
- a researched Russian architectural reference for the civic pavilion/shared civic space, replacing glass-pavilion language while preserving the library–civic-space–Guild Hall connection;
- a monumental guild hall on the opposite pavilion edge;
- two guild-hall basements and three above-grade stories;
- dormitories, four kitchens, living spaces, theater, lecture hall, dance hall, and a researched guild bar;
- pavilion statuary and a more intentional civic ensemble;
- block-and-area infill so the town reads as coherent urban fabric;
- a wider, more ceremonial stadium road with billboards;
- a midway toll-road-style oasis;
- a GTA V–evocative but original mini-bunker at the oasis;
- a coherent Westlight stadium island with intentional pier buildings;
- a researched amusement pier with roller coaster and Ferris wheel;
- paired outer steak and shrimp/seafood houses;
- aligned main-district, pier, and stadium pedestrian malls/streets;
- a contained lake in the crater west of the stadium, edged by quay and green space;
- two researched, facing amusement parks west of Westlight: one dry park and one water park, informed by Adventureland/Adventure Bay and Worlds of Fun/Oceans of Fun without copying them;
- a westward approach-road extension integrated with the crater-lake green belt;
- a Hampton-style medium-density lakeside neighborhood with a continuous public-waterfront relationship;
- two connected affordable/distressed-housing projects southwest of Ravensreach, each centered on useful outdoor space;
- a direct Ravensreach-to-rear-MainStreet staff path and an employee lounge;
- final maps, floor plans, screenshots, object/media database relations, a detailed PM PDF, Sites publication, and verified Box handoff.

The governing design requirement is not “make every parcel denser.” It is “make every arrival, edge, courtyard, threshold, and destination intelligible while preserving authored work and normal walking.”

### 2.2.1 Controlling residential-garage change

The owner’s latest direction supersedes every earlier prospective detached-garage rule:

- all residential garages must be attached to their parent houses;
- large houses must receive either four-car or six-car attached garages; and
- paving, a canopy, a wall, or a token connector does not count as attachment.

R1’s eighteen detached garage objects remain immutable historical evidence but are now a required remediation scope. The affected source/generated/catalog records and full acceptance contract are in `attached-garage-requirement-supersession.md`. The current coordinate basis proposes attached envelopes for all 18 houses: two six-car (`H01`, `H07`), four four-car (`H03`, `H08`, `H09`, `H10`), and twelve attached two-car

### 2.2.2 Westlight and Russian-pavilion change

The second controlling change is recorded in `westlight-island-and-russian-pavilion-change-control.md`. It does not restore the retired glass shell. It requires a newly researched Russian architectural response within the civic composition, retaining:

`enlarged library ↔ civic pavilion/shared space ↔ monumental Guild Hall`.

It also expands Westlight from a road/stadium destination package into an integrated island/waterfront program. All new pier, ride, restaurant, crater water, quay, green-space, pedestrian, database, media, Sites, and Box claims remain pending engineering and release.

### 2.2.3 Westward districts and workforce-link change

The third controlling change is recorded in `westward-entertainment-housing-workforce-change-control.md`. It requires an original paired dry-park/water-park district west of Westlight, a westward road extension, crater-green-belt integration, medium-density lakeside housing, two connected southwest-Ravensreach housing projects, and a staff route to a rear MainStreet employee lounge.

The named parks are research precedents, not copy targets. “Affordable” and “distressed” describe program/economic condition and do not relax safety, completeness, dignity, route, room, evidence, or database standards. All physical and publication claims remain pending.

## 2.3 Current publication and handoff state

Sites version 4 is current and healthy at:

`https://mc-fleet-world-atlas.ianwalmsley.chatgpt.site`

The root route returned HTTP 200 with Cloudflare Worker outcome `ok` after the runtime fix. Access remains custom owner-only: one allowed user, no groups.

The Box connector is real and reachable, but the July 28 cloud handoff is not complete. Automatic sync is disabled, the last durable ledger ends on July 27, and representative Wave 2/current-expansion directories are absent remotely. See `box-handoff-audit.md`.

## 2.4 Frozen expanded scope and current closeout control

Owner direction continued after the initial WBS cut in this source. Nothing in the earlier summary narrows or supersedes that later scope. The binding 98-requirement ledger is `session-frozen-scope-register.md`, with machine-readable status in `session-frozen-scope-register.json`. It covers all 12 delivery families now represented in the canonical package and media contract:

1. town core, completed penthouse, period longhouse, courtyard and infill;
2. civic pavilion, fourfold library, Guild Hall, bar and east civic grounds;
3. corrected C01 underground vehicle high bay, five levels, owner residence and private owner areas—never a stadium or ordinary hangar;
4. observatory mega-estate and inactive portal-room galleries;
5. Gilded Raven theater, modern private owner corridor and future owner-city reservation;
6. Westlight theaters, Russian-referenced pavilion, stadium island, pier, rides, restaurants, crater lake, parks and housing;
7. MainStreet attached garages, full parking, underground warehouse, guest services roof and workforce links;
8. tollway oasis, mini-bunker, RV sales/service campus and roadside program;
9. full Iowa data-center district: 12 DSM halls, six Google halls, two LightEdge halls, NOC/power/staff venues and separate InfoBunker annex;
10. Meta/Google/LightEdge expansions, Concord service town, pond, trails, shelters and disc-golf worker commons;
11. Concord Broadcast Exchange, nine-dish satellite pad and two complete soundstage annexes; and
12. five Manager Vale mini-mansion cottages with attached garages and complete room/furnishing schedules.

The adult-themed spaces in these families are non-graphic architectural programs, but they are not empty labels. Their accepted design standard requires real room hierarchy, circulation, beds, lounges, bars, stages, privacy vestibules, storage, lighting, acoustic treatment, durable finishes, consent and staff-safety cues, and furnished floor-plan evidence. See `non-graphic-adult-interior-design-standard.md`.

The current canonical package is generated offline, not live:

| Control | Current evidence |
|---|---|
| Package | `town-expansion-r1-2026-07-28` |
| Compiler state | `COMMISSION_STAGE_READY_C01_RETIREMENT_AND_P01_RECOVERY_DEFERRED` |
| Forward hash | `a326d880dbdb4ff174a9c12e2be124272d7e1513c282508582749c3d3962975b` |
| Exact-object media contract | 340 objects / 589 stable shots / 1,178 paired captures |
| Map contract | 13 maps: one whole-world plus 12 delivery-family sheets |
| Requirements | 98 frozen requirements; none silently closed by generation |
| Live entity gate | Failed/blocked; no Town Expansion world mutation authorized |

| DRAFT — NOT AS-BUILT — LIVE CLOSEOUT GATES PENDING | |
|---|---|
| Transaction/post/media/database | Pending; final/as-built documentation prohibited |

The dedicated documentation profile prepares `master-plan.draft.html`, `artifact-register.draft.md`, and `requirements-status-matrix.draft.{json,md}`. Every page is labeled `DRAFT — NOT AS-BUILT`; all 25 selected map/screenshot positions remain visible pending placeholders until accepted post-state images exist. Final mode fails before writing unless the committed transaction, distinct immutable post snapshot, bound live-entity clearance, independent post QA, paired media QA, atomic database import, read-only database census, and byte-exact hashes all pass.

---

# 3. Evidence-based chronology

All timestamps are UTC.

| Time | Event | State and evidence |
|---|---|---|
| 2026-07-27 23:51:47–23:52:21 | R1 five-package coordinated transaction | Committed; `data/world-review/redevelopment-atomic-transaction-2026-07-27.json` |
| 2026-07-28 00:27:57–00:33:36 | R1 independent normal-walk QA | PASS; `data/world-review/redevelopment-route-qa-2026-07-27.json` |
| 2026-07-28 00:37:20 | R1 post-deployment verifier | PASS; five packages, 36,781 unique cells, 91 images |
| 2026-07-28 00:37:48 | R1 database import ledger finalized | +44 features, +3 scans, +44 observations |
| 2026-07-28 01:02:52 | Initial owner-only Sites release | Version 1 succeeded |
| 2026-07-28 01:03:42 | R1 artifact register finalized | Machine register and compiled dossier synchronized |
| 2026-07-28 01:04:42 | Sites source records publication | Version 2 source commit |
| 2026-07-28 01:52:00 | R1 release-manifest retrospective | Independent compatibility record |

DRAFT · NOT AS-BUILT

## 4.1 Completed/accepted predecessor work

| WBS | Package | Deliverable | State |
|---|---|---|---|
| 1.1 | R1 atomic release | Five exact-state packages plus rollback | Verified |
| 1.2 | R1 movement | 22 routes / 44 directions | Verified |
| 1.3 | R1 media | 91 post screenshots / 7 maps | Verified |
| 1.4 | R1 database | 44 features, 3 scans, 44 observations | Imported |
| 1.5 | R1 publication | Sites v1/v2 | Published |
| 2.1 | Wave 2 tunnel | `INF-RR-02` T2b dry-liner pilot | Verified |
| 2.2 | Wave 2 MainStreet | R08 east-west cross-link | Verified |
| 2.3 | Wave 2 exact-object media | 79 images, 69/69 building coverage | Verified |
| 2.4 | Wave 2 database | 51 features, 2 scans, 51 observations | Imported |
| 2.5 | Wave 2 publication | Sites v3 content and v4 runtime repair | Published |

## 4.2 Current expansion work packages

### WBS 3 — SURVEY, CONTROLS, AND MASTER PLANNING

| WBS | Scope | Required output | Acceptance |
|---|---|---|---|
| 3.1 | Freeze expansion baseline | Immutable saved-world path/hash, region count, bytes | Independent hash match |
| 3.2 | Town cadastral survey | Existing buildings, parcel gaps, doors, grades, views, protected bounds | Complete feature/obstruction register |
| 3.3 | Corridor survey | Town-to-stadium path, widths, grades, landmarks, conflicts | Stationed route plan |
| 3.4 | Spatial master plan | Pavilion civic ensemble, town blocks, road, oasis, bunker | One coordinated map with envelopes |
| 3.5 | Package interface control | Unique cells, shared edges, construction order | Zero target overlap and explicit dependencies |

### WBS 4 — PENTHOUSE COMPLETION

| WBS | Scope | Required output | Acceptance |
|---|---|---|---|
| 4.1 | Existing penthouse audit | Shell, stair/elevator arrival, usable headroom, views, unfinished faces | Before census and images |
| 4.2 | Redesign | Room schedule, circulation, roofline, terrace, service core | Reviewed plan/elevations |
| 4.3 | Construction | Exact forward/rollback package | Installed-state PASS |
| 4.4 | Experience QA | Normal walking, arrival clarity, room access | Both directions / all rooms |
| 4.5 | Media/database | Floor plan, exterior/interior captures, exact object relation | Imported and hash-verified |

### WBS 5 — LONGHOUSE AND COURTYARD REPLACEMENT

| WBS | Scope | Required output | Acceptance |
|---|---|---|---|
| 5.1 | Amsterdam-building identity audit | Exact objects to replace, protected contents, salvage concerns | Explicit owner/object register |
| 5.2 | Period design | Longhouse massing, structure, roof, hearth, service, entries | Fits adjacent town vocabulary |
| 5.3 | Courtyard design | Enclosure, drainage, paving, planting, lighting, desire lines | Readable civic/semiprivate edge |
| 5.4 | Replacement transaction | Removal/install with exact recovery package | Source/desired/rollback bijection |
| 5.5 | Post QA | No floating fabric, no blocked doors, route clarity | Independent PASS |

The replacement must not be described as “Amsterdam removed” until the exact objects and their protected contents are identified and the post snapshot proves the accepted replacement.

DRAFT — NOT AS-BUILT

| DRAFT — NOT AS-BUILT — LIVE CLOSEOUT GATES PENDING | | | |
|---|---|---|---|
| **WBS** | **Scope** | **Required output** | **Acceptance** |
| 6.1 | Library program | Fourfold gross-area target, collections, reading, staff, service, stairs | Measured area schedule |
| 6.2 | Vertical circulation | Public stair, accessible-feeling alternate route within Minecraft constraints, egress redundancy | Bidirectional all-level QA |
| 6.3 | Two-level terrace | Concrete walk-out levels, rails, landings, stairs/ramps to pavilion | Continuous walk and fall-edge audit |
| 6.4 | Pavilion interface | Door/axis alignment, terrace landing, event spill-out | Clear threshold and sightline |
| 6.5 | Media/database | Every new level and terrace relation | Floor plans and exact captures |

“Four times as big” must be resolved by measured baseline and accepted post-construction gross floor area, not visual impression.

### WBS 7 — PAVILION CIVIC ENSEMBLE

| WBS | Scope | Required output | Acceptance |
|---|---|---|---|
| 7.1 | Pavilion audit | Current geometry, retired glass-shell history, Garth/loggia/stoa, views, entries | Existing-condition plan |
| 7.2 | Russian-reference research | Coherent selected lineage, authoritative sources, rejected alternatives | Cited research/selection brief |
| 7.3 | Architectural response | Original Russian-referenced pavilion/civic composition; no glass-box reading | Plans, elevations, sections |
| 7.4 | Statuary | More statues with plinths, hierarchy, view corridors | No route obstruction |
| 7.5 | Ensemble composition | Library–civic pavilion/space–Guild Hall axis | Legible from all approaches |
| 7.6 | Event use | Gathering, performance, procession, spill-out | Capacity and circulation test |
| 7.7 | Night identity | Lighting hierarchy without visual noise | Night capture and route PASS |

### WBS 8 — MONUMENTAL GUILD HALL

The guild hall is a five-level civic/institutional complex: two basements and three above-grade stories. “Over the top” is interpreted as expensive craftsmanship, generous rooms, ceremonial sequence, layered materials, and excellent operations—not random detail density.

| WBS | Level/zone | Minimum programmed spaces |
|---|---|---|
| 8.1 | Basement 2 | Deep stores, secure archive/treasury, mechanical/service, protected refuge, staff circulation |
| 8.2 | Basement 1 | Production kitchen, beverage cellar, receiving, green room, rehearsal/support, back-of-house |
| 8.3 | Ground | Ceremonial lobby, guild bar, great hall, theater arrival, public kitchens/service |
| 8.4 | Level 2 | Lecture hall, meeting rooms, guild offices, living rooms, additional kitchens |
| 8.5 | Level 3 | Dormitories, lounges, bathing/support spaces, private dining, dance-hall overlook or event support |
| 8.6 | Vertical core | Grand public stair, service route, basement route, secondary egress |
| 8.7 | Pavilion connection | Direct, obvious, weather-protected-feeling threshold |
| 8.8 | Evidence | Five level plans, sections, exterior/interior images, database object tree |

Program minimums:

- two basement levels;
- three above-grade stories;
- dormitories;
- four distinct kitchens with assigned roles;
- multiple living/lounge spaces;
- theater;
- lecture hall;
- dance hall; and
- guild bar.

The four kitchens should not be four decorative counters. A defensible split is banquet/production, restaurant/bar, teaching/demonstration, and residential/dormitory. Each needs a purpose, adjacencies, storage, and service route.

### WBS 9 — GUILD BAR SPECIALIST PACKAGE

| WBS | Scope | Required output | Acceptance |
|---|---|---|---|
| 9.1 | Precedent research | Guild halls, grand hotel bars, club rooms, beer halls, institutional hospitality | Cited design brief |

DRAFT NOT AS-BUILT

| | | | |
|---|---|---|---|
| 9.2 | Guest sequence | Pavilion/guild entry, reception, bar reveal, seating choices, event overflow | Sightline diagram |
| 9.3 | Bar operations | Backbar, taps, wells, glass/storage, cellar link, wash/service, staff route | Functional plan |
| 9.4 | Social zoning | Main rail, booths, standing room, fireplace/club seating, private room, performance edge | Capacity/adjacency schedule |
| 9.5 | Material identity | Premium timber, stone, metal, lighting, guild heraldry | Palette and detail sheet |
| 9.6 | QA | Counter access, clear aisles, no decorative blockage, bar-to-kitchen/cellar route | Normal-walk PASS |

The bar research and engineering package must be a named subpackage, not a paragraph buried in the guild-hall report.

### WBS 10 — TOWN BLOCK AND COURTYARD INFILL

| WBS | Scope | Required output | Acceptance |
|---|---|---|---|
| 10.1 | Figure-ground study | Building fronts, backs, gaps, courts, streets, paths | Existing/proposed diagram |
| 10.2 | Block structure | Coherent edges and address hierarchy | Every principal door has an address/route |
| 10.3 | Infill kit | Walls, gardens, workshops, sheds, small houses, service courts as appropriate | No filler without purpose |
| 10.4 | Corner legibility | Landmarks and framed views | Decision-point sightline QA |
| 10.5 | Wayfinding | Signs/markers only where spatial form does not suffice | No sign clutter |
| 10.6 | Residential garage remediation | Attach all 18 known R1 garage objects to parent houses; classify large houses | 100% attached; large houses have 4 or 6 clear bays |
| 10.7 | Garage circulation | Interior house-to-garage and garage-to-road routes | Both directions per relationship |
| 10.8 | Garage evidence/database | Same-camera relationship captures and current feature geometry/status | Exact relations refreshed |

### WBS 11 — STADIUM CEREMONIAL BOULEVARD

| WBS | Scope | Required output | Acceptance |
|---|---|---|---|
| 11.1 | Existing-road survey | Width, grade, crossings, pinch points, protected assets | Station schedule |
| 11.2 | Boulevard design | Wider road, edge treatment, lighting, procession rhythm | Continuous route |
| 11.3 | Billboard program | Siting, spacing, message hierarchy, night legibility | No sightline/clearance conflicts |
| 11.4 | Destination reveal | Stadium legibility before final arrival | Fixed-camera sightline proof |
| 11.5 | Movement QA | Town ↔ stadium in both directions | No dig, tower, flight, forced jump |

### WBS 12 — MIDWAY OASIS

The requested precedent is the Chicago-area tollway oasis: a legible midway stop integrated with the route rather than an isolated roadside object.

| WBS | Scope | Required output | Acceptance |
|---|---|---|---|
| 12.1 | Station selection | Approximately halfway by route distance/travel time | Surveyed chainage |
| 12.2 | Access | Safe deceleration/turn-in, entry, exit, pedestrian path | Both directions |
| 12.3 | Program | Food/rest, overlook, services, signage, parking or lay-by equivalent | Program schedule |
| 12.4 | Landscape | Oasis identity, shade, water/planting if safe, night beacon | Day/night images |
| 12.5 | Town/stadium continuity | Oasis strengthens, not interrupts, route story | Corridor map |

### WBS 13 — OASIS MINI-BUNKER

The bunker may evoke the planning fantasy and cinematic identity associated with GTA V facilities, but it must be an original design. It must not copy a protected game asset or confuse above-grade roadside hospitality with secure underground circulation.

| WBS | Scope | Required output | Acceptance |
|---|---|---|---|
| 13.1 | Concept research | Hidden facility precedents, secure arrival, original game-inspired mood | Cited brief |
| 13.2 | Concealment | Surface cover, screened entry, no exposed concrete shell | Section/census proof |
| 13.3 | Internal program | Security, operations, storage, service, emergency egress, small briefing/social spaces | Room schedule |
| 13.4 | Circulation | Primary and secondary routes, stairs/landings/headroom | Bidirectional route PASS |

DRAFT — NOT AS-BUILT

| | | | |
|---|---|---|---|
| 13.5 | Safety | Fluids, gravity, block entities, inventories, terrain cover, entity gates | Independent PASS |
| 13.6 | Evidence/database | Surface, entry, section, level plans, interiors, exact object links | Complete relation set |

## WBS WL — WESTLIGHT STADIUM-ISLAND COHERENCE

| WBS | Scope | Required output | Acceptance |
|---|---|---|---|
| WL.1 | Island/shore/crater survey | Figure-ground, shoreline, grade/water, protected objects, routes, sightlines | Complete measured base |
| WL.2 | District alignment | Main Mall, Pier Mall, stadium streets, quay walk, service street | One legible address/axis system |
| WL.3 | Intentional pier buildings | Water-building register, piles/decks/wharves, land/water access, sections | 100% structurally/route legible |
| WL.4 | Amusement-pier research | Authoritative sources, comparisons, selected/rejected layouts | Cited research paper |
| WL.5 | Ferris wheel | Wheel, support, hub, loading, clearance, lighting | Geometry/clearance/route PASS |
| WL.6 | Roller coaster | Station, lift/crest/turn sequence, supports, maintenance/queue | Geometry/clearance/route PASS |
| WL.7 | Paired dining houses | Outer steak house and shrimp/seafood house | Complete operations and exact media |
| WL.8 | Crater lake | Closed basin, water datum/volume, neighbor-fluid model | Zero leaks/unplanned flooding |
| WL.9 | Quay/green space | Hard/soft edge hierarchy and continuous green loop | Bidirectional loop and edge QA |
| WL.10 | Stadium protection | Screen/stage/sports modes and arrival views | Sightline matrix PASS |
| WL.11 | Release/publication | Ops/rollback, QA, DB, media, atlas, dossier, Sites, Box | All final gates PASS |

## WBS WD — WESTWARD ENTERTAINMENT, HOUSING, AND WORKFORCE LINKS

| WBS | Scope | Required output | Acceptance |
|---|---|---|---|
| WD.1 | Paired-park research | Cited Adventureland/Adventure Bay and Worlds of Fun/Oceans of Fun comparison; selected original concept and rejected options | Source/reasoning matrix complete |
| WD.2 | Paired-park master plan | Facing gates, shared arrival, separate guest/service/emergency systems | Coherent pair; no copied branded forms |
| WD.3 | Dry amusement park | Gate, family/thrill zones, rides, food, service, return routes | Program/clearance/routes PASS |
| WD.4 | Water park | Gate/support, splash/pool/slide zones, food/service, contained water | Program/fluid/clearance/routes PASS |
| WD.5 | Westward approach | Stationed road, crossings, destination decisions, greenway/service logic | All required directions PASS |
| WD.6 | Crater-green-belt integration | Continuous public lake loop connected to stadium, pier, parks and housing | No severance or privatized edge |
| WD.7 | Hampton-style lakeside housing | Design code, medium-density blocks, public edge, attached garages | Character/density/access/garage gates PASS |
| WD.8 | Southwest housing projects | Two distinct connected projects with programmed central outdoor spaces | Dignity/completeness/routes PASS |
| WD.9 | Staff path | Ravensreach ↔ rear MainStreet station/grade/headroom route | Both directions normal-walk PASS |
| WD.10 | Employee lounge | Room/operations/adjacency plan at rear staff entrance | Complete and unobstructed |
| WD.11 | Evidence/database | Maps, plans, exact captures, object/room/route/media relations | Integrity/FK/hash/decode PASS |
| WD.12 | Release/publication | Ops/rollback, QA, catalog, dossier, Sites and Box | All final gates PASS |

## WBS 14 — RELEASE, PUBLICATION, AND HANDOFF

| WBS | Scope | Required output | Acceptance |
|---|---|---|---|
| 14.1 | Atomic release | Fixed order, exact guards, reverse-order compensation | Durable committed ledger |
| 14.2 | Post snapshot | New immutable region copy | Aggregate hash and changed-state proof |
| 14.3 | Independent QA | Installed, rollback, route, camera, database contracts | All gates PASS |
| 14.4 | Database import | New features/scans/observations | Integrity `ok`, FK 0, backup recorded |
| 14.5 | Atlas/catalog | New maps, floor plans, exact-object media | Complete target coverage |
| 14.6 | PM dossier | HTML/PDF plus machine register | Hash synchronized |
| 14.7 | Sites | Source commit, saved version, owner-only deployment, runtime logs | `/` 200 / Worker `ok` |
| 14.8 | Box | Sync report and remote SHA-1 comparison | Zero failed/skipped, all current |

DRAFT · NOT AS-BUILT

# 3. Requirements traceability matrix

| ID | Owner requirement | Work package | Completion evidence | Current state |
|---|---|---|---|---|
| PEN-01 | Recheck, redesign, and finish penthouse | WBS 4 | Before/post plans, ops, QA, images, DB | In progress |
| LNG-01 | Replace Amsterdam buildings with period longhouse | WBS 5 | Object register, guarded replacement, post QA | In progress |
| CRT-01 | Do courtyard work | WBS 5, 10 | Courtyard plan, route/sightline QA | In progress |
| LIB-01 | Make library 4× as big | WBS 6 | Baseline/post GFA schedule | In progress |
| LIB-02 | Two-floor concrete walk-out terrace to pavilion | WBS 6 | Sections, routes, captures | In progress |
| GHD-01 | Pavilion connects library and guild hall | WBS 7, 8 | Axis plan and route QA | In progress |
| GHD-02 | Larger-than-life guild hall | WBS 8 | Five-level plans, room schedule, evidence | In progress |
| GHD-03 | Two basements / three stories | WBS 8 | Level census and section | In progress |
| GHD-04 | Dorms, 4 kitchens, living, theater, lecture, dance | WBS 8 | Room/adjacency register | In progress |
| BAR-01 | Specialist guild bar research/plan/build | WBS 9 | Cited brief, ops plan, route QA | In progress |
| PAV-01 | More pavilion statues | WBS 7 | Statuary plan, clearance QA | In progress |
| PAV-02 | Russian architectural reference replaces glass-pavilion language | WBS 7 | Cited selection, plans/elevations, no glass-box reading | New controlling requirement |
| PAV-03 | Library–civic space–Guild Hall connection retained | WBS 6–8 | Axis plan and bidirectional route | New controlling requirement |
| TOWN-01 | Fill gaps so town reads in blocks/areas | WBS 10 | Figure-ground and address map | In progress |
| GAR-01 | Every residential garage is attached | WBS 10.6–10.8 | Post geometry, interior connection, routes, cameras | New controlling requirement |
| GAR-02 | Large houses have 4-car or 6-car attached garages | WBS 10.6–10.8 | House-size/capacity schedule and clear bay census | New controlling requirement |
| RD-01 | Bigger, ceremonial stadium road | WBS 11 | Stationed road plan and route QA | In progress |
| RD-02 | Billboards along road | WBS 11 | Billboard register and sightline proof | In progress |
| OAS-01 | Midway Chicago-tollway-style oasis | WBS 12 | Halfway calculation, plan, images | In progress |
| BKR-01 | Original GTA V–evocative mini-bunker | WBS 13 | Research, plans, concealment/route QA | In progress |
| WL-01 | Coherent Westlight stadium island | WBS WL | Island master plan and post QA | New controlling requirement |
| WL-02 | Water buildings become intentional pier buildings | WBS WL.3 | Register, structures, sections, routes | New controlling requirement |
| WL-03 | Researched amusement pier with coaster/Ferris wheel | WBS WL.4–WL.6 | Research, geometry, clearance, images | New controlling requirement |
| WL-04 | Paired outer steak/shrimp houses | WBS WL.7 | Plans, operations, routes, exact media | New controlling requirement |
| WL-05 | Align main/pier/stadium malls and streets | WBS WL.2 | Axis/address/route plan | New controlling requirement |
| WL-06 | Water-filled west crater with quay/green edge | WBS WL.8–WL.9 | Containment, hydrology, loop QA | New controlling requirement |
| WDP-01 | Facing researched dry and water parks west of Westlight | WBS WD.1–WD.4 | Research, original master plan, programs, clearances and routes | New controlling requirement |
| WDP-02 | Extend Westlight approach road west | WBS WD.5 | Station/grade/decision/crossing plan and route QA | New controlling requirement |
| WDP-03 | Integrate parks/road with crater-lake green belt | WBS WD.6 | Continuous-loop and safe-crossing evidence | New controlling requirement |
| LKH-01 | Hampton-style medium-density lakeside housing | WBS WD.7 | Design code, block/address plan, public edge, exact media | New controlling requirement |
| RHA-01 | Two connected southwest-Ravensreach affordable/distressed projects | WBS WD.8 | Project plans, central spaces, dignity and route QA | New controlling requirement |
| STF-01 | Staff path from Ravensreach to rear MainStreet main building | WBS WD.9 | Station/headroom/protected-intersection and bidirectional route | New controlling requirement |

DRAFT — NOT AS-BUILT

| DRAFT — NOT AS-BUILT — LIVE CLOSEOUT GATES PENDING | | | | |
|---|---|---|---|---|
| STF-02 | Employee lounge at staff destination | WBS WD.10 | Room/operations plan, transaction, routes and exact media | New controlling requirement |
| DOC-01 | Verify all PDFs/screenshots/materials | WBS 14 | Artifact register, file QA, hashes | Pending final artifacts |
| BOX-01 | Move final material to Box | WBS 14 | Sync ledger and remote SHA-1 match | Pending |
| DOC-02 | Detailed PM-style PDF for all July 28 sessions | WBS 14 | Final PDF/hash/Box/Sites record | Source in progress |

# 6. Baseline, release, and database identity ledger

## 6.1 Saved-world identities

| State | Directory | Aggregate SHA-256 | Files / bytes |
|---|---|---|---|
| R1 prerelease | `data/worldsnap-prerelease2-42545b02f60fa881-20260727/region` | `42545b02f60fa881cb3d7fb82f2b22b1145623fa16e8c674a179113b48c639cf` | See R1 release ledger |
| R1 accepted post / Wave 2 engineering baseline | `data/worldsnap-wave2-baseline-4fca1ff3-20260728/region` | `4fca1ff3c40ae9c24c9338483b0780678aa5966bb570a642f0d0277885331a2b` | 26 / 122,744,700 |
| Wave 2 prerelease | `data/worldsnap-wave2-prerelease-b1356bca9fcbdc7a-20260728/region` | `b1356bca9fcbdc7a90b580b2f9210947788d74716e1a706f5e8f0d0f789dbb27` | 26 / 123,279,631 |
| Wave 2 accepted post | `data/worldsnap-wave2-postrelease-d05ac7822795eff0-20260728/region` | `d05ac7822795eff03340e46695a6f3accbdffdf82d11559d857e17b4d1962999` | 26 / 123,313,802 |
| Town expansion baseline | Must be frozen and named by the current release team | **Pending** | **Pending** |
| Town expansion post | Must be captured only after committed release | **Pending** | **Pending** |

The mutable `data/worldsnap/region` directory is not an acceptable release identity.

## 6.2 Database identities

| Boundary | Features | Scans | Observations | SHA-256 |
|---|---|---|---|---|
| Before R1 import | 780 | 18 | 1,786 | `2eb3fcf5c8103392f89f9f00e013e5b2ff773b7092cfa47c4e72d0375fa3f8c7` backup |
| Accepted R1 | 824 | 21 | 1,830 | `005a714f90e1fc12a42de825b84290d07a9a090d0580b7112b277158e942123d` |
| Accepted Wave 2 | 875 | 23 | 1,881 | `1bd71512b9246b67b25a7fff91cd0745eb47d089e66fa15ee7ab23a41b21a503` |
| Town expansion pre-import | Must equal the accepted starting boundary or explain later changes | Pending | Pending | Pending |
| Town expansion accepted post-import | New object count plus exact relations | Pending | Pending | Pending |

Wave 2's pre-import recovery database is `data/backups/world-map-wave2-preimport-20260728T024110Z.db`, SHA-256 `a9af19a2823464a6a190f53283ae4d0215e49d44a6481a3b2fe0a80b455cef06`.

The live database may have WAL activity. Final identity must come from a checkpointed/import ledger and an independent read-only verifier, not an opportunistic hash while services are writing.

# 7. Accepted QA results

## 7.1 R1

| Gate | Result |
|---|---|
| Packages | 5 / 5 PASS |
| Guarded operations | 7,265 |
| Unique target cells | 36,781 |
| Cross-package overlaps | 0 |

DRAFT - NOT AS-BUILT

DRAFT — NOT AS-BUILT — LIVE CLOSEOUT GATES PENDING

| | |
|---|---|
| Rollback guards | 7,265 matched |
| Routes | 22 / 22 |
| Directions | 44 / 44 |
| Post images | 91 |
| Post atlas | 7 maps |
| Database import | 44 / 44 features |

Machine source: `data/world-review/redevelopment-post-deployment-qa-2026-07-27.json`.

## 7.2 Wave 2

| Gate | Result |
|---|---|
| Packages | 2 / 2 PASS |
| Explicit target cells | 887 / 887 |
| Reactive cells | 2 / 2 |
| Rollback | 887 guards/restorations |
| Guarded sign commands | 4 / 4 |
| Routes | 2 / 2 |
| Directions | 4 / 4 |
| Matched post cameras | 14 / 14 |
| Exact-object media | 79 / 79 |
| Building exact screenshot coverage | 69 / 69 |
| Building exact floor-plan coverage | 69 / 69 |
| Database import | 51 / 51 |
| Final gates | 8 / 8 |

Machine source: `data/world-review/redevelopment-wave2-post-release-qa-2026-07-28.json`.

## 7.3 Town expansion mandatory QA

No town-expansion package may inherit R1/Wave 2 acceptance. It must pass:

1. immutable baseline identity;
2. complete target-cell and block-property census;
3. unique target cells inside and across packages;
4. source/desired/rollback bijection;
5. block-entity, inventory, fluid, gravity, waterlogging, support, and entity exclusions;
6. protected existing-feature intersection checks;
7. approved demolition/replacement register;
8. fixed all-package operation order;
9. strict-noop forward preflight;
10. strict-noop rollback parser/preflight;
11. live entity/player clearance;
12. committed transaction with zero unexplained no-ops;
13. immutable post snapshot;
14. installed-state and exact rollback proof;
15. normal-walk route tests in both directions;
16. fixed-camera before/after evidence;
17. database backup/import/integrity/FK proof;
18. final atlas/catalog/media relation coverage;
19. final dossier file/hash validation;
20. healthy owner-only Sites release; and
21. Box sync plus remote SHA-1 verification.

DRAFT · NOT AS-BUILT

### 8.1 Decisions retained from Wave 2

- Raven Rock T2b stopped at x `-136`; the prescribed x `-135` terminal was rejected because immutable inspection found an active wet boundary.
- The T2b repair is an addition-only route liner within a cavern, not a full cave fill.
- MainStreet R08 repaired a specific missing east-west cross-link rather than relocating protected homes or replaying R1.
- Neighbor-reactive fence states were modeled explicitly instead of weakening exact guards.
- The transaction ledger remains append-only at `committed-pending-post-qa`; final acceptance comes from the separate post verifier.
- Building media coverage and matched release cameras are separate evidence sets with different snapshot bindings.

### 8.2 Decisions governing the town expansion

- The pavilion becomes the civic hinge: library on one side, monumental guild hall on the other.
- The new pavilion/shared civic composition uses a selected, researched Russian architectural lineage. The retired glass shell remains historical and is not replayed.
- The library's "4×" target is quantitative and must be shown in an area schedule.
- The guild hall is five levels, with operations and circulation designed before decorative density.
- The bar is a dedicated researched work package.
- Courtyards and infill must create blocks, addresses, and thresholds—not fill every empty cell.
- The stadium road is a corridor project with stations, grades, landmark rhythm, and movement QA.
- The oasis is selected by measured midway position, not by choosing a vacant parcel first.
- The mini-bunker must be original, concealed, and independently traversable.
- Existing Amsterdam-style objects are not removed until their exact object IDs, contents, and recovery contract are known.
- Detached residential garages are prohibited. R1's `R4-GAR-H01..H12` and `R4-GAR-C02..C07` objects must be attached through a separately guarded retrofit; large parents receive four or six clear attached bays.
- No package may claim "finished" because a screenshot looks good.
- Westlight is treated as one island/waterfront district: stadium, main area, pier, restaurants, crater lake, quay, green space, streets, and pedestrian malls share one master plan.
- The westward dry and water parks form an original facing pair based on research lessons, not copied park branding or layouts.
- The westward road and new parcels must preserve and strengthen the continuous crater-lake green belt.
- Lakeside housing is medium-density and may not privatize the entire water edge; the current attached-garage change also controls it.
- Southwest Ravensreach housing is judged for dignity, completeness, central outdoor-space quality, and connected routes—not decorative deterioration.
- The staff path is a measured operational route ending at a complete employee lounge, not an informal desire line.

---

## 9. Interface and dependency plan

### 9.1 Critical path

```
baseline freeze
  → cadastral/corridor survey
  → coordinated master plan and protected envelopes
  → package generators and rollback
  → cross-package integration audit
  → same-moment prerelease snapshot/entity gate
  → fixed-order atomic release
  → immutable post snapshot
  → installed/rollback/route/camera QA
  → database import
  → atlas/catalog/dossier
  → Sites saved version and production health
  → Box sync and remote hash verification
```

### 9.2 Principal spatial interfaces

| Interface | Owning packages | Required contract |
|---|---|---|
| Library ↔ pavilion | WBS 6/7 | Shared terrace landing, no duplicate cells |
| Pavilion ↔ guild hall | WBS 7/8 | Shared ceremonial axis and accessible-feeling route |
| Guild hall ↔ bar/kitchens | WBS 8/9 | Back-of-house route and cellar/service adjacency |

| | | |
|---|---|---|
| Longhouse ↔ courtyard/infill | WBS 5/10 | Address, service edge, drainage/grade |
| Town ↔ boulevard | WBS 10/11 | Legible departure/arrival threshold |
| Boulevard ↔ oasis | WBS 11/12 | Safe entry/exit and uninterrupted main route |
| Oasis ↔ mini-bunker | WBS 12/13 | Concealed secure interface without confusing public circulation |
| Stadium ↔ main district ↔ amusement pier | WBS WL | Shared axes, malls/streets, addresses and sightline protection |
| Pier buildings ↔ water/quay | WBS WL.3/WL.8/WL.9 | Structural waterline and continuous public/service routes |
| Crater lake ↔ quay/green loop | WBS WL.8/WL.9 | Contained hydrology and continuous safe edge |
| Westlight island ↔ stadium boulevard/oasis | WBS 11/12/WL | One legible arrival sequence |
| Stadium/island ↔ westward approach ↔ paired parks | WBS 11/WL/WD.1–WD.5 | Shared hierarchy, decision points, crossings and protected sightlines |
| Crater lake ↔ green belt ↔ lakeside housing | WBS WL.8/WL.9/WD.6/WD.7 | Continuous public edge, safe grade/water interface, no privatization |
| Lakeside housing ↔ attached-garage program | WBS WD.7/10.6–10.8 | Continuous parent fabric, interior route, correct 4/6-bay large-house capacity |
| Southwest projects A ↔ B ↔ Ravensreach | WBS WD.8 | Complete addresses, central spaces and bidirectional normal-walk routes |
| Ravensreach ↔ staff path ↔ rear MainStreet lounge | WBS WD.9/WD.10 | Protected operational route and unobstructed back-of-house connection |
| All packages ↔ database/media | WBS 14 | Stable external IDs and exact relations |

# 10. Risk register

Likelihood and impact use 1–5 scales; score is their product.

| ID | Risk | L | I | Score | Response / stop condition |
|---|---|---|---|---|---|
| RSK-T01 | Packages overlap at pavilion/library/guild edges | 4 | 5 | 20 | One interface-control map; zero duplicate target cells |
| RSK-T02 | Longhouse demolition destroys protected contents | 3 | 5 | 15 | Inventory/block-entity census and explicit salvage/recovery |
| RSK-T03 | Library is visually larger but not 4× | 4 | 3 | 12 | Baseline/post gross-area schedule |
| RSK-T04 | Terrace has falls, awkward stairs, or blocked walking | 4 | 4 | 16 | Rail/landing/headroom audit plus both-direction walk |
| RSK-T05 | Guild program fits on paper but circulation fails | 4 | 5 | 20 | Adjacency model, cores first, room-by-room route tests |
| RSK-T06 | Four “kitchens” are decorative duplicates | 3 | 3 | 9 | Assign operational roles, storage, service and equipment |
| RSK-T07 | Over-detail makes bar unusable | 4 | 3 | 12 | Protect rail, aisles, staff route, seating clearances |
| RSK-T08 | Pavilion statues obstruct civic/event routes | 3 | 4 | 12 | View/clearance envelope before placement |
| RSK-T09 | Infill produces clutter rather than block structure | 4 | 4 | 16 | Figure-ground/address test; reject purposeless filler |
| RSK-T10 | Boulevard grading damages existing terrain/assets | 3 | 5 | 15 | Stationed exact-state operations; protected intersections |
| RSK-T11 | Billboards block views or route decisions | 3 | 3 | 9 | Sightline matrix and spacing register |
| RSK-T12 | Oasis is not actually halfway or feels detached | 3 | 3 | 9 | Route-distance/travel-time station selection |
| RSK-T13 | Mini-bunker shell becomes visible | 4 | 4 | 16 | Surface-cover section and exposed-material census |
| RSK-T14 | Bunker stair/headroom repeats prior tunnel failures | 4 | 5 | 20 | Uniform section standard and normal-walk QA |
| RSK-T15 | Existing accepted R1/Wave 2 fabric is replayed/overwritten | 2 | 5 | 10 | Cross-release target and protected-feature exclusion |
| RSK-T16 | Database import precedes physical/media acceptance | 3 | 4 | 12 | Import is after post/route/camera gates |
| RSK-T17 | New screenshots lack exact-object links | 4 | 3 | 12 | Capture manifest requires one primary external ID |
| RSK-T18 | Dossier and PDF become stale after late changes | 4 | 3 | 12 | Generate register, then PDF, then freeze/hash |
| RSK-T19 | Sites repeats version 3 runtime exception | 3 | 4 | 12 | Build bundled Worker and inspect production logs |
| RSK-T20 | Local `exports/box` is mistaken for cloud upload | 5 | 4 | 20 | Require remote path and SHA-1 verification |
| RSK-T21 | A credential leaks into the dossier | 2 | 5 | 10 | Redact secrets/tokens/identity; scan before publication |
| RSK-T22 | Concurrent teams mutate shared artifacts mid-release | 4 | 4 | 16 | Freeze manifests, fixed ownership, hash after quiescence |
| RSK-T23 | Historical detached-garage package is mistaken for current design authority | 5 | 4 | 20 | Supersession register; do not replay R4/R5 generator |

DRAFT · NOT AS-BUILT

| | | | | | |
|---|---|---|---|---|---|
| RSK-T24 | A cosmetic connector is counted as an attached garage | 4 | 4 | 16 | Require continuous occupied fabric and an interior walking route |
| RSK-T25 | Large-house garage capacity is undercounted | 4 | 4 | 16 | Measured classification and explicit 4/6 clear-bay census |
| RSK-T26 | Russian pavilion becomes an incoherent theme collage | 3 | 4 | 12 | One cited lineage; record rejected alternatives |
| RSK-T27 | Pavilion blocks the library/Guild Hall civic axis | 3 | 5 | 15 | Elevation/sightline and bidirectional route gate |
| RSK-T28 | Crater water escapes or floods caves/objects | 4 | 5 | 20 | Closed-basin proof, object census, neighbor-fluid simulation |
| RSK-T29 | Pier buildings still look accidentally afloat | 4 | 4 | 16 | Required piles/wharf deck/waterline sections |
| RSK-T30 | Rides collide with buildings or stadium modes | 4 | 5 | 20 | 3D clearance and protected sightline matrices |
| RSK-T31 | Amusement pier is a dead end or evacuation trap | 3 | 5 | 15 | Public return, service, and emergency-route contracts |
| RSK-T32 | Restaurants become decorative shells | 3 | 3 | 9 | Kitchen/storage/staff/delivery/guest route schedules |
| RSK-T33 | Main district, pier, and stadium remain disconnected | 4 | 4 | 16 | Shared axis/address/paving/light plan and approach cameras |
| RSK-T34 | Precedent parks become direct branded copies | 3 | 5 | 15 | Cited transferable lessons; original names, plans and forms |
| RSK-T35 | Westward road severs crater green belt | 4 | 5 | 20 | Continuous loop and explicit safe crossing at every conflict |
| RSK-T36 | Water-park fill escapes or damages protected objects | 4 | 5 | 20 | Closed-boundary, block-entity and neighbor-fluid proof |
| RSK-T37 | Lakeside housing privatizes the shore | 4 | 4 | 16 | Continuous public edge and mapped access/view corridors |
| RSK-T38 | Housing density becomes incoherent sprawl | 3 | 4 | 12 | Measured block/type schedule and figure-ground review |
| RSK-T39 | “Distressed” housing becomes unsafe caricature | 3 | 5 | 15 | Dignity/completeness audit and all-room/all-route QA |
| RSK-T40 | Staff path collides with protected rear operations | 4 | 4 | 16 | Fresh intersection and inventory/loading checks |
| RSK-T41 | Employee lounge is decorative or obstructive | 3 | 3 | 9 | Room/adjacency/operations and route acceptance |

# 11. Artifact and hash register

This table identifies the authoritative control artifacts. The Wave 2 machine register contains the complete 356-file ledger and should be used instead of reprinting hundreds of image rows here.

| Artifact | SHA-256 | Role |
|---|---|---|
| `data/world-review/redevelopment-post-deployment-qa-2026-07-27.json` | `0e3140f01614c21e4dfccad6613cbe0ae17bbf3f865cfbd1eaa2570106b4ba91` | R1 post acceptance |
| `data/world-review/redevelopment-release-database-import-2026-07-27.json` | `8c766c45edcade184ab8fb4d4004020c5ecd7ec9fbf0b0bbfb92ae4b59f2bd6d` | R1 database ledger |
| `data/world-review/redevelopment-artifact-manifest-2026-07-27.json` | `5680c2fcaad0a2f139dd453f26c53c598aae9011dd748d5c4b637ae171bd1f49` | R1 file register |
| `docs/redevelopment/2026-07-27/master-plan.pdf` | `3a9e8b49f7ee6aab8f59f92eb0f596dc2d5009e9f6b11e473469b223815acc3d` | R1 compiled dossier |

The last three expansion hashes are preliminary baseline inputs. They are not post-construction acceptance.

### 11.1 Point-in-time PDF and image validation

The machine audit `media-file-verification-audit.json` checked July 28–modified PDFs and images under `docs` and `data/exports`, excluding duplicate copies in the Sites public directory:

- 6/6 PDFs were recognized as PDF 1.4 or 1.5 with nonzero page counts;
- the two C01 supplements are one page each;
- the two worldwide floor-plan atlases are 76 pages each;
- the R1 and Wave 2 master dossiers are eight pages each; and
- 399/399 PNG/JPEG/WebP files decoded through Node canvas with zero failure.

This is a point-in-time file-integrity result. It does not validate the final town-expansion PDF or post-construction media, which do not yet exist. It also does not prove Box transfer; that remains `PENDING_SYNC`.

## 12. Sites publication record

### 12.1 Version history

| Version | Commit | Purpose | Outcome |
|---|---|---|---|
| 1 | `eff5518cc920aed7bb69103ca051a5e033ff7fd5` | Initial R1 atlas | Published |
| 2 | `a6f29995cd49553e457028e1556c32a49a671869` | R1 publication-record rollup | Published |
| 3 | `316903cb85b5faa989a888f400279256dec27619` | Wave 2 atlas/evidence | Deployment completed, runtime Error 1101 |
| 4 | `7777e20566f888d5ff66f5e290821eba0ef5bac3` | Bundled OpenNext Worker | Published and healthy |

Current version 4:

- version ID: `appgprj_6a67cce1a3848191bfb86ef2ef8ab567~appgver_33afceee942c8191a33e8cbd53b5420a`;
- archive SHA-256: `14c029631b5b7e37b14469471fe69128688f8d2cb7626e7d69e4b92e367e868b`;
- archive size: 79,247,360 bytes;
- file count: 410;
- production root after fix: HTTP 200 / Worker `ok`; and
- access: owner-only, no groups.

version 4 bundles the OpenNext worker before packaging.

Machine audit: `external-publication-audit.json`.

### 12.2 Current expansion publication gate

Do not overwrite the v4 claim with town-expansion language until:

- post-construction snapshot and database hashes are final;
- all new maps/screenshots/plans are copied into the Sites source;
- the site repository is clean and committed;
- the exact commit is pushed;
- a version is saved from an archive built from that commit;
- the owner-only version is deployed;
- production `/` and important asset/report routes return successfully;
- Worker error logs are empty for the validation window; and
- the dossier records the exact version/archive/source identities.

---

## 13. Box handoff record

### 13.1 Current evidence

- Connector: enabled and reachable.
- Authentication: client credentials configured; secret excluded.
- Auto-sync: off.
- Last durable sync: 2026-07-27T04:25:16.826Z.
- Current approved-root census at audit: 701 files / 175,826,622 bytes.
- Approved artifacts newer than the ledger: 242 files / 84,285,976 bytes.
- Post-ledger files above 50 MiB: zero.
- Representative Wave 2/current expansion remote directories: absent.

Decision: **PENDING_SYNC**.

### 13.2 Required closeout evidence

The final dossier must append:

| Field | Required value |
|---|---|
| Sync started/completed | UTC timestamps |
| Discovered | Final approved artifacts |
| Uploaded | Count |
| Updated | Count |
| Unchanged | Count |
| Skipped | Must be 0, or each omission dispositioned |
| Failed | Must be 0 |
| Bytes uploaded | Exact |
| Sync report | Approved local path and SHA-256 |
| Remote verification | File count plus SHA-1 equality |
| Credential scan | PASS; no secret/token/identity in artifacts |

---

## 14. Final deliverable register

### 14.1 Already available

- R1 and Wave 2 release/rollback packages;
- two independent accepted post snapshots;
- R1 and Wave 2 database ledgers;
- R1 and Wave 2 post QA;

DRAFT · NOT AS-BUILT

- Wave 2 79-image exact-object media release;
- seven-sheet Wave 2 post atlas;
- R1 and Wave 2 master PDFs;
- owner-only Sites v4; and
- town-expansion baseline atlas, current-condition survey maps, and oblique evidence views.

### 14.2 Required after current construction

Exact paths may be chosen by the release team, but the dossier requires one unambiguous path for each item:

1. expansion immutable baseline manifest;
2. expansion master-plan map;
3. final coordinated forward/rollback release manifest;
4. per-package forward/rollback files;
5. cross-package independent QA;
6. live entity gate;
7. atomic transaction ledger;
8. immutable post snapshot manifest;
9. independent installed/rollback verifier;
10. all bidirectional route reports;
11. before/after camera manifests and image reports;
12. longhouse and courtyard plans;
13. penthouse plans/sections;
14. library area schedule and level plans;
15. library–pavilion terrace sections;
16. pavilion statuary/ensemble plan;
17. five guild-hall level plans and sections;
18. guild bar research/design/operations report;
19. town figure-ground and address plan;
20. stadium boulevard station/billboard register;
21. oasis plan and midway calculation;
22. mini-bunker plans, sections, concealment census, and route QA;
23. database backup/import/integrity ledger;
24. final object-to-media catalog;
25. final surface atlas and floor-plan atlas;
26. final artifact hash register;
27. compiled session PM HTML/PDF and hashes;
28. Sites commit/version/deployment/runtime report; and
29. Box sync plus remote SHA-1 verification;
30. residential house/garage classification and capacity schedule;
31. attached-garage forward/rollback and relationship-camera package; and
32. refreshed database/catalog/Sites records superseding detached labels;
33. Russian civic-pavilion research, selection matrix, plans/elevations and axis/route evidence;
34. Westlight island figure-ground, shoreline/water/grade and protected-object survey;
35. intentional pier-building register, plans, sections and exact captures;
36. amusement-pier research paper and selected/rejected layouts;
37. Ferris-wheel and roller-coaster plan/profile/clearance packages;
38. steak-house and shrimp-house plans, operations schedules and media;
39. main/pier/stadium pedestrian-mall/street alignment plan;
40. crater-lake containment/neighbor-fluid proof; and
41. quay/green-space loop plan and bidirectional QA;
42. paired-park research paper, source matrix, selected/rejected plans, and original dry/water-park programs;
43. dry-park and water-park plans, sections, ride/attraction clearances, contained-water proof, routes, and exact captures;
44. westward approach-road alignment, station/crossing plan, routes, and crater-green-belt integration;
45. Hampton-style lakeside design code, medium-density blocks/addresses, public-waterfront routes, floor plans, and exact captures;
46. two southwest-Ravensreach housing-project plans, central-space schedules, connection/dignity QA, floor plans, and exact captures;
47. Ravensreach-to-rear-MainStreet staff-path survey, forward/rollback, bidirectional route QA, and evidence; and
48. employee-lounge plan, operations schedule, forward/rollback, database relation, and exact captures.

---

## 15. Completion and acceptance checklist

The program manager may mark the current expansion complete only when every line is `PASS` or has an owner-approved disposition:

- [ ] Baseline immutable and independently hashed.
- [ ] Exact protected/demolition object register approved.
- [ ] Penthouse installed and all-room walking verified.

DRAFT · NOT AS-BUILT

DRAFT — NOT AS-BUILT — LIVE CLOSEOUT GATES PENDING

- [ ] Every residential garage is physically attached to its parent house.
- [ ] Every large house has either four or six clear attached garage bays.
- [ ] All 18 known R1 detached garage features have an explicit current disposition and refreshed database/media relation.
- [ ] House-interior ↔ garage ↔ road routes pass in both directions.
- [ ] Courtyard complete and connected.
- [ ] Library post area is at least 4× measured baseline.
- [ ] Two-level concrete terrace connects library to pavilion.
- [ ] Pavilion statuary and civic route remain clear.
- [ ] A cited Russian architectural lineage controls the pavilion/shared civic response; no modern glass-box pavilion remains in the current design.
- [ ] Library ↔ Russian-referenced civic space/pavilion ↔ Guild Hall passes in both directions.
- [ ] Guild hall contains two basements and three stories.
- [ ] Guild hall room schedule proves dorms, four operationally distinct kitchens, living spaces, theater, lecture hall, dance hall, and bar.
- [ ] Guild bar has its own cited plan and operations QA.
- [ ] Town figure-ground demonstrates coherent blocks/areas.
- [ ] Stadium boulevard is complete and traversable.
- [ ] Billboard register and sightline audit pass.
- [ ] Oasis is demonstrably midway and connected in both directions.
- [ ] Original mini-bunker is concealed and walkable.
- [ ] Westlight reads as one coherent stadium-island district.
- [ ] Every over-water building has an intentional pier/wharf structure and valid public/service route.
- [ ] Researched amusement pier, Ferris wheel, and roller coaster pass clearance, support, queue, and route QA.
- [ ] Outer steak and shrimp houses are complete operational buildings.
- [ ] Main district, pier, and stadium are aligned by legible pedestrian malls and streets.
- [ ] West crater contains the exact approved water volume with zero leakage or unplanned flooding.
- [ ] Quay and green-space loop are continuous and safe to walk.
- [ ] Cited research controls an original facing dry-park/water-park pair west of Westlight; no precedent is directly copied.
- [ ] Both parks have complete guest, staff, service, maintenance, emergency, queue, attraction, food/support, clearance, and route evidence.
- [ ] Water-park fluid containment and neighbor-fluid QA pass.
- [ ] Westward approach road reaches both parks and preserves a continuous crater-lake green belt with explicit safe crossings.
- [ ] Hampton-style lakeside housing is medium-density, retains continuous public lake access, and complies with the attached-garage change.
- [ ] Both southwest-Ravensreach housing projects are complete, connected, and organized around programmed, lit, overlooked central outdoor spaces.
- [ ] Housing dignity/completeness QA finds no unsafe caricature, inaccessible dwelling, trapped court, or unexplained ruin.
- [ ] Ravensreach ↔ rear MainStreet staff entrance passes normally in both directions.
- [ ] Employee lounge program, operations, protected-object, route, database, and exact-media gates pass.
- [ ] Cross-package target overlaps are zero.
- [ ] Transaction committed with strict guards and durable ledger.
- [ ] Post snapshot and exact rollback proof pass.
- [ ] All required routes pass both directions without dig/tower/flight.
- [ ] Every new object has exact plan/screenshot relations.
- [ ] Database import, integrity, FK, backup, and accepted hash pass.
- [ ] All PDFs open, have nonzero pages, render, and match the register.
- [ ] Every screenshot decodes, has expected dimensions, and matches its manifest hash.
- [ ] Atlas/catalog/dossier agree on snapshot and database identities.
- [ ] Sites owner-only version is healthy in production.
- [ ] Box sync has zero failed/skipped files.
- [ ] Box remote SHA-1 matches every final handoff artifact.
- [ ] No credentials, tokens, user identity, or private bypass data appear in the dossier or exports.

---

| Physical release coordinator | Pending | — | — |
| Independent QA | Pending | — | — |
| Database/media | Pending | — | — |
| Sites publication | Pending | — | — |
| Box handoff | Pending | — | — |

This source remains intentionally open until the town-expansion post-state, final PDF, production Sites version, and remote Box hashes exist.

DRAFT · NOT AS-BUILT

DRAFT — NOT AS-BUILT — LIVE CLOSEOUT GATES PENDING

# July 28 Town Expansion — Frozen Scope and PM Control Register

Document ID: `REDEV-2026-07-28-TOWN-EXPANSION-FROZEN-SCOPE-01`
Machine register: `session-frozen-scope-register.json`
Scope freeze: 2026-07-28 UTC
Current program decision: **DO NOT RELEASE — OFFLINE DESIGN AND WIP EXIST, BUT THE CURRENT PACKAGE IS BLOCKED AND NOTHING IN THIS EXPANSION IS LIVE**

---

## 1. Executive decision

The owner's full program is recorded and traceable. It includes the original mapping, database, Sites, tunnels, MainStreet, C01, stadium and master-planning requests; the complete Ravensreach civic, Westlight, westward parks/housing, data-campus, observatory, Worker Town and B01 additions; and the latest Gilded Raven adult theater, dedicated modern owner tunnel, extravagant stairs/lifts, future mini-city reservation/sales office, 24-slot DSM correction, preserved campus-road holdout home, Iowa Data District Phase 0 and complete Concord service town.

The most important PM fact is the state boundary:

- R1 and Wave 2 are accepted predecessor releases. They do not prove this expansion.
- Sites version 4 is a healthy predecessor publication. It does not contain an accepted town-expansion as-built.
- Town Expansion WIP2 generated 145 offline scopes and 2,321,651 exact-guarded target cells, but it is blocked by a protected chest at `(-117, 68, -349)`.
- The independent point-in-time safety audit says `BLOCKED_DO_NOT_RELEASE`.
- B01 Guest Services now has a validated source model, but that source has not been emitted into a final accepted operations package.
- The Gilded Raven/owner-corridor package is an implementation-ready coordinate plan with clean selected survey geometry, but it is not in the current WIP operations and is not live.
- The future owner mini-city is a reservation. Only its Founders' Gallery Sales Office is a current build candidate.
- The Iowa Phase 0 precincts are **planned/unbuilt**. Phase 0 is roads, perimeters, low wall/foundation outlines, gates, site reservations and billboards—not finished data halls.
- Concord is different: it is a complete-town build target, but currently has only a binding research/design brief; coordinates, operations and live evidence are pending.
- The July 28 Box handoff is not verified. Connector reachability is not an upload receipt.

No world, Sites or Box deployment was performed by this PM/document-control task.

---

## 2. Claim and evidence rules

| State | What it proves |
|---|---|
| Requested | The owner requirement is recorded. |
| Surveyed | Existing conditions or a candidate were measured from a named source. |
| Researched | Standards and precedents were converted into a design basis. |
| Designed | A program, envelope, route or acceptance contract exists. |
| Generated offline | Forward/rollback or rendered files exist locally. Nothing live is implied. |
| Preflighted | Fresh source, exact guards, collision, protected-state and parser gates pass. |
| Committed live | An atomic live transaction ledger records success. |
| Verified post-state | Immutable post-state, rollback, movement, capacity and media gates pass. |
| Imported database | Accepted objects/relations entered the database with an integrity ledger. |
| Published Sites | An exact source-pinned version was saved, deployed and health-checked. |
| Box-verified | Remote path, bytes and content hash match for every required artifact. |

An earlier state never implies a later state. In particular:

- a source-code model is not a generated operation file;
- a generated operation file is not a preflight;

DRAFT - NOT AS-BUILT

- a live transaction is not accepted until independent post-state QA passes;
- a screenshot file is not an exact database relation merely because its name resembles an object;
- a healthy old Sites version is not publication of new work; and
- a Box connection is not proof of a remote handoff.

Adult-program design is controlled by one content rule: tasteful, consensual-adult, private, age-controlled and non-graphic architecture only. That applies to the Gilded Raven, B01 wellness/private rooms, owner rest-suite annexes, observatory owner rooms and the private literature archive.

---

# 3. Current evidence ledger

## 3.1 Current offline WIP

| Control | Recorded value |
|---|---|
| Package | `town-expansion-r1-2026-07-28` |
| Source snapshot | `data/worldsnap-town-expansion-expanded-baseline-20260728T0405Z/region` |
| Source SHA-256 | `e612b1feabcf8bd81e427804e0c5cdccea5aac79ef543cadbf2b05d360de7a5a` |
| Report | `data/buildops/town-expansion-r1-wip2.report.json` |
| Report SHA-256 | `04b1c2dffaac3396c94be5ea3fc30245e9665accabd341f12550515a46eda399` |
| Forward operations | 233,108 groups / 2,321,651 target cells / 145 scopes |
| Forward SHA-256 | `a48db51242b299daf746a429727de995c1a6bfede3f486e7d8b5fad3f37e7a8c` |
| Rollback SHA-256 | `f26220752fb7b3d53d6a2123eb98760f4ddae21268f77bfbc73e8411de790554` |
| Exact guarded | 2,321,651 cells |
| Unguarded | 0 |
| Skipped | 1 |
| Current state | `BLOCKED_PROTECTED_BLOCK_ENTITIES` |
| Blocker | One chest at `(-117,68,-349)` in the steward mini-mansion scope |

The chest may not be dismissed as “just one cell.” The model must route around it or use an owner-reviewed inventory preservation/migration contract.

## 3.2 Independent safety audit

The point-in-time audit is `independent-release-geometry-safety-audit.md` with machine record `independent-release-geometry-safety-audit.json`. Its decision is `BLOCKED_DO_NOT_RELEASE`.

It identified unresolved concerns in the data campus, wet warehouse authority and egress, C01 coordinate/road/migration controls, Westlight implementation, pavilion water/statue/monument/tunnel interfaces, and observatory implementation/NBT boundaries. The audit captured an earlier generator source. That makes it a point-in-time control, not irrelevant history: every finding still needs an explicit final-source closure test.

Its limited passing spatial conclusion was that the planned civilian library–Guild tunnel is separated vertically and horizontally from the Ravensgate restricted volume. WIP2 also reports zero civilian targets in that restricted volume. That is an offline design fact, not a live acceptance.

## 3.3 B01 Guest Services source model

The binding review is `mainstreet-guest-services-rooftop-wellness-design-review.md` and its `machine schedule`.

The generator source now contains a model-only implementation. Its reported model checks include:

- 15 protected kitchen block entities and zero targeted;
- 45 adjusted dry support positions;
- four broad stair cores;
- two lift cores;
- two remote routes;
- 3,813 modeled water cells at final priority 990; and
- zero T2b geometry.

DRAFT - NOT AS-BUILT

of live result. The B01 review also used a state that did not contain the planned stair lounge/greenway; the final generator must reconcile that connection on one same-moment immutable source.

## 3.4 Gilded Raven and modern owner corridor

The frozen design sources are:

- `worker-town-gilded-raven-theater-owner-tunnel-source-of-truth.md`;
- `worker-town-gilded-raven-theater-owner-tunnel-coordinate-schedule.json`;
- `worker-town-theater-owner-tunnel-survey.json`; and
- `modern-underground-corridor-standard.md`.

The selected theater, descent, owner corridor, seven rest suites, future-city reservation, sales office, mansion ascent and mansion arrival gallery each have zero surveyed fluids and zero block entities. Their relevant face halos are also dry.

Key design facts:

- The Gilded Raven is a non-graphic adult theater/cabaret with a 168-seat main house, five five-person salons and four one-to-one mini theaters.
- Stage, apron, backdrop and lighting frame must exist before any fixed seat.
- Five broad open vomitories connect the seating bowl to a real circulation ring.
- Theater descent uses one 6-rise/12-run ceremonial flight and nine full 12-rise/24-run switchback flights.
- Mansion ascent uses thirteen 12-rise/24-run flights.
- Both major cores use seven-block-clear stairs, six blocks of headroom and adjacent minimum six-by-six lift cars.
- The owner corridor is 928 blocks long, level, five blocks clear by five high, with a nine-block construction envelope at floor `y=-44`.
- It is explicitly a new modern owner system, not T2b. It has no connection to T2b, Raven Rock, Ravensgate, the library–Guild tunnel, portals, C01, natural caves or public/performer routes.
- Seven rest suites use premium hospitality and tasteful, non-graphic private annexes.
- The future city reservation is `[65,-38,-280,125,-20,-200]` and must remain unexcavated.
- Only the Founders' Gallery Sales Office at `[78,-46,-227,106,-33,-204]` is a current build candidate.
- The mansion arrival intentionally shares 276 authored interface cells with the east wing; every other selected object has zero overlap with WIP2.

The clean survey does not remove the need to exact-list and top-down pre-support gravity cells, regenerate from a new same-moment source, reconcile the mansion interface in one scope, and pass route/isolation/stair/lift/media QA.

## 3.5 Corrected data-district control

The controlling count is a 24-slot Microsoft/DSM-inspired register grouped:

`DSM1–4`, `DSM5–8`, `DSM9–13`, `DSM14–18`, and `DSM40–45`.

The numbering jumps must never be turned into a claim of 45 facilities. Public-record source status and Minecraft implementation state are separate fields. The expansion team's current target is 24 modeled/completed Minecraft hall slots, but they remain non-live until a final generated package and post-state acceptance exist.

The three additional Iowa precincts are governed by `iowa-data-district-phase0-source-of-truth.md`:

- Meta Altoona-inspired: 12 future envelopes, using a public-record-supported 12-building planning precedent;
- Google Council Bluffs-inspired: six fictional future envelopes, explicitly not a claim of the real current building count; and
- LightEdge Solutions EdgeBCC Altoona-inspired: two future buildings with four quadrants each. The correct name is **EdgeBCC**, not EdgeConneX.

All are `PLANNED / PHASE 0 / UNBUILT`. Tonight's planned physical vocabulary is limited to roads, contour-following terrain work, perimeters, obvious gates, low future-wall/foundation outlines, reservations and block-art billboards. The district spine must continue beyond the third precinct, retain future junctions, a green/utility reserve and at least two unassigned future-campus parcels.

Phase 0 also includes a fictional shared power backbone: one switching yard, two independent-looking transmission corridors, one substation yard/reservation for each named precinct, a continuing utility corridor, energy-operations shell and marked unfinished storage pads. It is a walkable Minecraft planning diagram, not a reproduction or claim of real line routes, voltages, protection, controls, entries or security. Firebreak/planted separation must protect the holdout home, public courts, staff buildings, pools and detention water.

Terrain may not become one giant flat slab or exposed vertical cliff. It uses contour-following benches, planted cut/fill slopes and limited retaining edges. Water must be classified before alteration: useful drainage becomes a designed detention lake/dammed landscape or green corridor; only isolated nuisance pockets may be drained without redirecting flow.

The campus-road holdout home is a separate protected program: preserve a medium older personal home amid growth and add an attached four-car garage, backyard pool/treehouse, fallout shelter, first-floor tasteful non-graphic adult suite/service kitchen/bedroom-viewing salon/private room, and two-room office/lounge. Its final survey evidence is pending and the parcel may not be absorbed by Phase 0.

DRAFT — NOT AS-BUILT — LIVE CLOSEOUT GATES PENDING

The binding design brief is `concord-data-district-service-town-source-of-truth.md`.

Concord is a compact complete service town along the district road, not another future-outline campus. Its approach looks deliberately ordinary: gas station, small post office, neighborhood bar, motel sign, worker shuttle stop, planted edge and no blank backs. Behind that frontage is a purpose-built, non-graphic adult nightlife court for the data-center construction and operations workforce.

The controlled program includes:

- a two-story motel with exactly 25 rooms: 13 ground and 12 upper;
- a smaller Gilded Raven Annex directly opposite, with exactly 72 main-room seats, three five-seat salons and two single-guest salons;
- a separate non-graphic dance/strip-club venue;
- shared pedestrianized parking court, planted center walk and direct public entrances;
- distinct rear service, performer and management routes;
- shift-change shuttle stop, waiting lounge and late-night food;
- two empty future entertainment parcels with sidewalk/utility stubs; and
- an extendable planted turning court.

The annex has no connection to Worker Town's owner corridor, Ravensgate or an inactive portal room. Concord must use stepped terrain benches, planted transitions, useful drainage/detention and green separation from power yards, not a giant slab. Its present evidence state is `RESEARCHED_AND_DESIGNED_COORDINATES_PENDING`.

---

# 4. Evidence-based session chronology

All timestamps are UTC.

| Time | Event | Truth state |
|---|---|---|
| Jul 27 23:51–Jul 28 01:04 | R1 atomic release, routes, database, dossier and Sites | Accepted predecessor |
| 02:26–02:46 | Wave 2 atomic release, routes, database, media, dossier and Sites source | Accepted predecessor |
| 02:54:31 | Sites Worker Error 1101, Ray `a2209982e8a31497` | Incident |
| 03:00–03:03 | Worker repair deployed as Sites v4; production `/` returned 200/outcome `ok` | Published predecessor |
| 03:06–03:10 | Town-expansion baseline atlas/evidence and read-only Sites/Box audit | Surveyed |
| 03:14 | Guild Hall and specialist bar research/program | Researched |
| 03:17–03:31 | All-attached garage change, coordinate and engineering schedules | Designed |
| 03:21 | Initial town-expansion coordinate schedule | Designed |
| 03:25–03:29 | Russian pavilion and Westlight island/waterfront controls | Designed |
| 03:31 | Westward parks/housing/workforce/staff-link change | Researched |
| 03:32 | Interim PM dossier, Box audit and session machine manifest | Interim |
| 03:47–03:49 | Town siting, parks, underground warehouse and RV design | Designed |
| 04:12–04:18 | Data campus, C01, warehouse and venue design packages | Designed |
| 04:22 | Pavilion/Ravensgate and observatory controls | Designed |
| 04:27 | Worker Town steward mini-mansion design | Designed |
| 04:30 | B01 Guest Services/rooftop-wellness review | Designed with holds |
| 04:31 | WIP2: 145 scopes / 2,321,651 targets | Modeled, blocked |
| 04:32 | Independent geometry/safety audit | Blocked, do not release |
| 04:50–04:56 | Gilded Raven, owner tunnel, rest suites, sales office, city reservation and mansion arrival frozen | Implementation-ready coordinates, not generated/live |
| 04:53 | Modern underground corridor standard | Binding design source |
| 04:55 onward | Corrected DSM register, holdout home, Iowa Phase 0 master plan and shared fictional power-backbone controls | Researched/planned, non-live |
| 05:01 | Concord complete service-town brief, exact motel/theater program and non-graphic nightlife economy | Researched/designed; coordinates pending |
| PM freeze | Full owner scope consolidated; no world/Sites/Box deployment by this task | Frozen scope |

DRAFT - NOT AS-BUILT

## 3. Master plan structure

### MP-01 — Ravensreach Civic Garth and Town Fabric

Complete the town-building penthouse; replace the Amsterdam group with a period longhouse; make its courtyard a real room in the town; enlarge the library to at least four times measured usable area; descend through a two-level concrete walk-out terrace into the civic pavilion; and cross the pavilion to a monumental five-level Guild Hall. The whole ensemble needs clear block edges, thresholds, views, service gaps, statuary and addressable places.

Current truth: researched/designed and largely modeled in WIP2, but blocked.

### MP-02 — Ceremonial Parkway, Oasis and Stadium Arrival

Turn the stadium road into a broad legible procession with six or an approved final count of safe billboards, a real halfway tollway-style oasis, and an original game-evocative mini-bunker. Every stadium seating bank must face an actual screen/stage. Wayfinding begins in town and continues through every decision point.

Current truth: designed/modeled, blocked; sightline and route proof pending.

### MP-03 — Westlight Island, Piers and Crater Waterfront

Unify the stadium island, pedestrian malls, intentional pier buildings, amusement pier, Ferris wheel, coaster, steak and shrimp houses, crater lake, quay and green edge. Preserve the accepted infinity screen and prove new work does not obscure or conflict with it.

Current truth: researched/designed/modeled, blocked.

### MP-04 — Westward Parks, Lakeside Housing and Workforce Link

Build original facing dry and water parks, extend the westward road and greenbelt, make a continuous public crater/lake edge, add Hampton-influenced medium-density housing and two dignified workforce projects around a shared court, and connect staff directly to rear MainStreet and its employee lounge.

Current truth: researched/designed/partly modeled, blocked.

### MP-05 — MainStreet America

Pull isolated service buildings into a coherent one- or two-street development, complete all roads, orient every house to a named street, convert all residential garages to real attached structures, and give every large house a four- or six-car attached garage. Complete B01 Guest Services and its roof/wellness program only after same-state and support/containment gates. Expand underground logistics and the RV sales district while restoring parking and preserving inventory.

Current truth: mixed design/source-model/WIP states; none accepted live.

### MP-06 — C01 Hidden Bunker and Recovered P01

Move the full complex east; recover the entire parking field; create a terrain-following road down the mountain side; recess and airlock the entrance; rebuild all program spaces and two independent egress routes; and achieve cellwise natural cover with no unintended concrete shell visible in a 360-degree camera review.

Current truth: surveyed/designed/modeled, blocked; competing coordinate bases, road and migration controls must be reconciled.

### MP-07 — Northeast Data/Aviation Campus and Iowa Phase 0

Use a correct 24-slot DSM register; separately verify the functional hall/rack program, NOC, power/support, dorms, independent 200-seat auditorium and 200-seat cinema, normal DM10, separate InfoBunker annex and aviation/logistics compound. Protect the holdout home. Extend a future-ready district spine into planned/unbuilt Meta, Google and EdgeBCC precincts using terraced grading, water/detention decisions, low construction outlines, a fictional shared power backbone and reserved future parcels.

Current truth: existing WIP’s old ten-hall program is blocked; 24-slot expansion and Phase 0 evidence are still being finalized and are non-live.

### MP-08 — Observatory Owner Estate

Create the mega-estate without impairing observatory function/views. Expand the safe room/shelter, owner wellness/private non-graphic program and monumental circulation. Keep all eight planned portal rooms entirely inactive and prove zero active portal blocks.

Current truth: designed/modeled, blocked.

DRAFT · NOT AS-BUILT

Preserve and expand the steward home(s), protecting the blocked chest and all retained block entities. Build the Gilded Raven as Worker Town's extravagant, traditional adult theater/cabaret with proper stage, sightlines, balconies, open circulation, dining, back of house, privacy, accessibility and two egress paths.

Current truth: mini-mansion modeled/blocked; theater implementation-ready coordinates but not generated.

### MP-10 — Modern Owner Underground and Future Mini-City

Build a dedicated owner system that is not T2b: a 928-block five-by-five-clear level corridor, seven rest suites, deliberate orientation nodes, modern lighting/wayfinding/utilities, and two monumental stair/lift terminals. Reserve the future mini-city without excavating it. Build only the sales office and sealed presentation marker in this phase.

Current truth: implementation-ready coordinate plan, not generated/live.

### MP-11 — Catalog, Media, Dossier, Sites and Box

After physical acceptance, generate the one-big-map overview, detailed district sheets, exact floor plans, matched object screenshots, database census/crosswalk, final all-session PM PDF, source-pinned Sites version and remote-hash-verified Box handoff.

Current truth: predecessor publication exists; all town-expansion closeout is pending.

### MP-12 — Concord Data-District Service Town

Build a complete compact two-street town along the data road. Keep the highway face ordinary and useful—fuel/general store, post office, bar, motel arrival, shuttle/lounge and late-night food—then form a deliberate non-graphic night court behind it. The 25-room motel and 72-seat Annex theater face each other; a separate dance venue closes the court; service and performer traffic use the rear lane; two future entertainment parcels extend the economy later.

Current truth: binding research/design brief; parcel coordinates, generation and live work pending.

---

## 6. Requirements-to-evidence matrix

The JSON register holds the full acceptance sentence and evidence list for each row. This table is the human review index.

### Documentation, urban design and tunnels

| ID | Requirement | Current truth | Next proof |
|---|---|---|---|
| DOC-001 | Detailed district/cluster maps | Baseline maps only | Accepted post atlas |
| DOC-002 | One big map of everything | Pending | Full accepted extent, no clipping |
| DOC-003 | More building/route/underground screenshots | Predecessor media only | Post-state capture manifest |
| DOC-004 | World/town database report | Old census only | Read-only final census/integrity |
| DOC-005 | Exact object-to-screenshot/floor-plan links | Wave 2 precedent only | Zero-orphan final crosswalk |
| DOC-006 | Sites showcase | v4 predecessor healthy | New source-pinned save/deploy/health |
| DOC-007 | Detailed all-session PM PDF | Interim source exists | Final evidence, render and verify |
| DOC-008 | Verify all new material in Box | Pending sync | Remote path/size/hash ledger |
| DOC-009 | City-grid research paper/source of truth | Researched | Final citations and design decisions |
| DOC-010 | Future plans and plots like a development | Partial schedules | Parcels, utilities, phases, IDs |
| DOC-011 | PM control for every request | In progress | Final closure matrix |
| URB-001 | Spacing, legibility and understandable turns | Partial design | Field-of-view and walk review |
| URB-002 | Fill town gaps as coherent blocks/areas | WIP modeled/blocked | Non-conflicting block plan |
| TUN-001 | Uniform tunnel standard | Binding modern standard | Final scope conformance |
| TUN-002 | Easy-to-walk stairs/stairwells | Partial designs | Bidirectional normal-walk QA |
| TUN-003 | New owner tunnel, explicitly not T2b | Clean coordinate plan | Fresh exact ops and isolation proof |
| TUN-004 | Premium rest nodes and extravagant stairs/lifts | Clean coordinate plan | Pre-support and movement QA |
| TUN-005 | Private, secure, legible, escapable owner route | Programmed | Access/egress matrix |

DRAFT - NOT AS-BUILT

| | | | |
|---|---|---|---|
| CIRC-003 | Monumental but usable stairs/lifts | Guild WIP + owner plan | All-level route acceptance |

## MainStreet America and C01

| ID | Requirement | Current truth | Next proof |
|---|---|---|---|
| MSA-001 | Bring isolated additions closer | Partial design | Coherent parcel/frontage walk |
| MSA-002 | Complete one/two-street system | Partial design | Continuous road/address/driveways |
| MSA-003 | Attach every residential garage | 18 modeled, blocked | Physical attachment/use/media/DB |
| MSA-004 | Large houses get 4/6-car attached garages | Designed/modeled | Classification and bay counts |
| MSA-005 | Integrate warehouse/cooking school/service buildings | Partial design | Frontage/service parcel proof |
| MSA-006 | B01 Guest Services/work club | Source-model validated | Final generated/report/route QA |
| MSA-007 | B01 patios, roof gardens, tubs, pool/bar, adult wellness | Source-model validated only | Support/containment/independent QA |
| MSA-008 | Staff path and employee lounge | WIP plus state mismatch | Same-moment rebase and walk |
| MSA-009 | Underground warehouse + full parking recovery | Designed/modeled, blocked | Dry shell, egress, inventory, count |
| MSA-010 | RV sales/customer/support district | Designed | Final engineering/generation |
| C01-001 | Move full bunker east/recover P01 | Designed/modeled, blocked | One authoritative schedule |
| C01-002 | Terrain-following side-mountain road | Partial design | Stationed grade/access QA |
| C01-003 | Move/recess/airlock entrance | Modeled, blocked | Portal route/camera proof |
| C01-004 | Entire complex underground/no shell visible | Modeled three-block cover claim | Cellwise cover and 360 cameras |
| C01-005 | Preserve complete program/routes/egress | 12 broad rooms modeled | Room crosswalk and route QA |
| C01-006 | Hide concrete projections/seams | Design criteria | Exterior view and terrain sections |

## Ravensreach, stadium road and oasis

| ID | Requirement | Current truth | Next proof |
|---|---|---|---|
| RRCH-001 | Finish/redesign penthouse | WIP modeled/blocked | Envelope, rooms, terrace, media |
| RRCH-002 | Replace Amsterdam group with period longhouse | Researched/modeled | Retirement and full-building proof |
| RRCH-003 | Designed longhouse courtyard | WIP modeled/blocked | Place/drainage/route review |
| RRCH-004 | Library at least four times larger | WIP modeled/blocked | Baseline versus usable area |
| RRCH-005 | Two-level concrete walk-out to pavilion | WIP modeled/blocked | Two levels and normal walking |
| RRCH-006 | Larger-than-life Guild Hall | Researched/modeled | Five-level complete building |
| RRCH-007 | 2 basements, 3 stories, dorms, 4 kitchens, halls/bar | Programmed/modeled | Independent room/capacity count |
| RRCH-008 | Specialist high-money guild bar | Researched/modeled | Full service/detail schedule |
| RRCH-009 | Blend library–pavilion–Guild and statues | Modeled with overlap risks | One non-overlap civic plan |
| RRCH-010 | Monumental grounds/pools/statues/fountain/memorial | Modeled with water risks | Containment/access/post-flow QA |
| RRCH-011 | Isolated library–Guild secret archive tunnel | Modeled/blocked | Dry route, vestibules, egress |
| RRCH-012 | Keep civilians out of Ravensgate volume | Offline separation PASS | Final-source/post-state proof |
| STAD-001 | Wider, extravagant stadium road | WIP modeled/blocked | Continuous grade/headroom/walk |
| STAD-002 | Billboards along road | Six modeled | Setback/readability/day-night media |
| STAD-003 | Seats face real screens, not doorway | Audit/design | Seat-level sightline matrix |
| STAD-004 | Make stadium easy to find | Partial plan | Decision-point wayfinding cameras |
| OASIS-001 | Midway Chicago-tollway-style oasis | Researched/modeled | Full access/service/rest routes |
| OASIS-002 | Original GTA V–evocative mini-bunker | Modeled/blocked | Dry original plan and egress |

DRAFT · NOT AS-BUILT

DRAFT — NOT AS-BUILT — LIVE CLOSEOUT GATES PENDING

| ID | Requirement | Current truth | Next proof |
|---|---|---|---|
| WL-001 | Coherent stadium-island destination | Designed/modeled | Aligned axes and walk |
| WL-002 | Intentional pier buildings | Designed/modeled | Program, doors, service, media |

| CONC-009 | Two future entertainment parcels and utility/street stubs | Programmed | Protected empty parcels in map/DB |
| CONC-010 | Terraced terrain, drainage and network isolation | Programmed | Survey, fluid decision, no-intersection QA |

# 7. Delivery work breakdown and acceptance sequence

## Phase A — Freeze and reconcile

1. Freeze all object IDs, package boundaries and controlling requirements.
2. Reconcile:
    - the blocked steward chest;
    - B01 staff-lounge/greenway source mismatch;
    - C01 coordinate schedules;
    - the intentional 276-cell owner-estate gallery interface;
    - the 24-slot DSM register and physical target schedule; and
    - Phase 0/holdout parcel boundaries.
3. Assign every shared cell to exactly one model scope.
4. Take one fresh same-moment immutable world snapshot.

## Phase B — Final engineering and generation

5. Repeat fluid, six-face fluid-halo, gravity, block-entity, entity, protected feature and cross-package censuses.
6. Finalize road grades, terraced cuts/fills, water classification, access, egress, screens/sightlines, stairs/lifts, containment and cover.
7. Generate exact one-cell forward and exact inverse rollback operations.
8. Require:
    - zero missing snapshot cells;
    - zero unauthorized protected block-entity targets;
    - zero unreviewed cross-scope overrides;
    - zero unintended package overlap;
    - all gravity pockets pre-supported;
    - all water staged and contained; and
    - no Phase 0 completed halls.

## Phase C — Independent offline release decision

9. Run independent geometry/program QA.
10. Run strict source-state preflight.
11. Run forward and rollback parser dry runs with strict no-op handling.
12. Verify full rollback bijection and practical compensation order.
13. Issue one explicit release decision. Offline PASS does not authorize live work by itself.

## Phase D — Coordinated atomic release

14. Confirm live entities/players and active builders are clear.
15. Confirm fresh source identity still matches.
16. Execute one controlled transaction in fixed order with compensation rules.
17. Record every operation result and rollback guard.
18. Freeze the immutable post snapshot immediately.

DRAFT · NOT AS-BUILT

19. Verify exact post states and rollback states.
20. Run:
    - all road, walkway and tunnel routes in both directions;
    - every stair flight normally in both directions;
    - every lift stop/access route;
    - all stadium/auditorium/cinema/theater sightlines;
    - C01 cover and exterior concealment;
    - every contained-water neighbor/flow test;
    - data hall/rack/seat/bed/garage/parking/room counts; and
    - portal inactivity/network-isolation tests.
21. Capture all prescribed matched after images.
22. Import only accepted objects and relations into the database.

### Phase F — Documentation and publication

23. Generate the full-world overview and all detailed atlas sheets.
24. Generate floor plans and object/media crosswalk.
25. Produce database census/integrity/import reports.
26. Compile the all-session master HTML/PDF.
27. Prepare the exact Sites source, commit/push it, save a version, deploy and health-check production.
28. Upload the identical final manifest set to Box.
29. Verify every remote Box path, byte count and hash.
30. Issue one final acceptance and publication ledger.

---

## 8. Release gates

The final release cannot proceed until all of these are closed:

1. one authoritative scope and coordinate basis;
2. fresh immutable same-moment source;
3. zero unauthorized protected block-entity targets;
4. zero missing cells and zero unreviewed overrides;
5. exact rollback for every target;
6. closed geometry, water, cover, capacity, sightline, stair/lift, access, egress and no-intersection findings;
7. strict preflight and both parser dry runs;
8. live entity/player clearance;
9. atomic transaction and immutable post snapshot;
10. independent exact-state and route acceptance;
11. complete matched media;
12. database import/integrity and exact catalog;
13. verified PDF, Sites deployment and Box remote ledger.

Current position: gate 3 is failed by the WIP chest. Most later gates have not run for a final integrated package.

---

## 9. Principal risks and control responses

| Risk | Severity | Control |
|---|---|---|
| Protected steward chest targeted | Blocker | Route around it or approved inventory-preserving migration |
| Independent audit findings remain open | Blocker | Finding-by-finding final-source closure |
| Clean owner/theater plan has gravity cells and one intentional interface | High | Top-down pre-support; one-scope interface reconciliation |
| B01 staff-connection source mismatch | High | Same-moment rebase |
| B01 pool/support is source-model only | High | Final operation report and independent support/containment QA |
| Competing C01 schedules | High | One superseding schedule |
| Large active-water programs | High | Staged barriers, exact sources, post-flow census |
| 145 scopes / 2.3M targets | High | Explicit override ownership, fixed order, compensation proof |
| Seating may still face a wall/door | Medium | Seat-level ray/sightline matrix |
| Real/fictional precedents may be mistaken for copy instructions | Medium | Use principles/program only; original geometry and identity |

DRAFT · NOT AS-BUILT

| DRAFT — NOT AS-BUILT — LIVE CLOSEOUT GATES PENDING | | |
|---|---|---|
| 24-slot numbering may be misread as 45 facilities | High | Exact 24-entry status register; no range inference |
| Phase 0 outlines may be called completed halls | High | `PLANNED / PHASE 0 / UNBUILT` on maps, Sites, PDF and Box |
| Campus growth may erase holdout home | High | Protected parcel/access/privacy/view easements |
| Phase 0 power may conflict with people/water or be mistaken for real topology | High | Fictional high-level design, firebreak/setbacks and exact collision QA |
| Concord may be confused with Phase 0 or its adult uses become explicit/route-conflicted | High | Separate complete-build scope, ADULT-001, exact counts and route isolation |
| Interim Sites/Box records may be mistaken for closeout | Medium | Separate predecessor and expansion publication states |
| Adult design could drift graphic or unsafe | Medium | Apply ADULT-001 and non-graphic media review |

## 10. Final deliverable manifest

| ID | Deliverable | Planned location | Current state |
|---|---|---|---|
| DEL-001 | Human frozen-scope register | This file | Authored |
| DEL-002 | Machine frozen-scope register | `session-frozen-scope-register.json` | Authored |
| DEL-003 | Accepted post snapshot/hash | To be assigned | Pending release |
| DEL-004 | Atomic forward/rollback ledgers | To be assigned | Pending |
| DEL-005 | Independent post-state and route QA | To be assigned | Pending |
| DEL-006 | One-big-map and detailed atlas | `data/exports/box/town-expansion-post-…/` | Pending post-state |
| DEL-007 | Matched screenshot release | `data/exports/town-expansion-media-post-…/` | Pending post-state |
| DEL-008 | Database census/catalog/crosswalk | `data/exports/world-catalog-town-expansion-post-…/` | Pending import |
| DEL-009 | All-session PM HTML/PDF | `docs/redevelopment/2026-07-28-town-expansion/master-plan.*` | Pending final evidence |
| DEL-010 | Source-pinned Sites version | `world-showcase/` | Pending final evidence/deploy |
| DEL-011 | Box remote verification ledger | `box-upload-verification.json` | Pending upload |

## 11. Sites content plan

The existing production project remains the opaque project recorded in `world-showcase/.openai/hosting.json`. At the prior audit, version 4 was healthy at:

`https://mc-fleet-world-atlas.ianwalmsley.chatgpt.site`

That is predecessor state. The next version should expose:

| Route | Content |
|---|---|
| `/` | One-big-map overview, district cards and prominent Requested/Designed/Modeled/Accepted legend |
| `/map` | Full accepted object extent, routes, underground layers, parcels and cameras |
| `/districts/ravensreach` | Penthouse, longhouse/court, library, pavilion, Guild Hall and tunnels |
| `/districts/mainstreet` | Streets, attached garages, B01, staff link, warehouse and RV district |
| `/districts/c01` | Parking recovery, road/portal sections, room crosswalk and concealment proof |
| `/districts/stadium-road` | Parkway, billboards, oasis, mini-bunker and wayfinding |
| `/districts/westlight` | Venues/screens, piers, rides, restaurants, crater lake and quay |
| `/districts/westward` | Paired parks, greenbelt, housing and workforce projects |
| `/districts/data-campus` | 24-slot status register, functional programs, holdout home and logistics |
| `/districts/iowa-phase-0` | Planned/unbuilt Meta, Google, EdgeBCC, future-reserve terrain/water and fictional power-backbone plan |
| `/districts/concord` | Ordinary frontage, worker services, 25-room motel, 72-seat theater, separate dance venue, shared court and future parcels |
| `/districts/observatory` | Estate, safe room and inactive portal gallery |
| `/districts/worker-town` | Steward homes and Gilded Raven |

DRAFT - NOT AS-BUILT

| DRAFT — NOT AS-BUILT — LIVE CLOSEOUT GATES PENDING | |
|---|---|
| `/districts/owner-underground` | Non-T2b corridor, suites, stairs/lifts, city reservation and sales office |
| `/objects/[id]` | Exact DB object, bounds, release, floor plans, screenshots, cameras and hashes |
| `/database` | Schema/census/integrity, accepted/superseded/proposed objects and media coverage |
| `/reports` | PM PDF, QA, research, manifests, change controls and Box ledger |

Sites rules:

- show evidence state and release ID on every object/page;
- never put Phase 0 envelopes in a “completed buildings” count;
- never put requested/modeled imagery in an “after” slider;
- use only exact database/media relations;
- keep adult-program content non-graphic;
- show size/SHA-256 for downloads;
- build both site and Worker bundle;
- push the exact source before saving a version; and
- deploy only the saved version and verify production HTTP/Worker outcome.

---

# 12. Box handoff plan

Prior read-only audit facts:

- connector reachability: PASS;
- automatic sync: disabled;
- last durable ledger completion: `2026-07-27T04:25:16.826Z`;
- representative July 28 remote directories found at audit: 0 of 4; and
- current July 28 handoff: `PENDING_SYNC`.

The final Box manifest needs one row per file:

| Required field | Meaning |
|---|---|
| `localPath` | Exact final local artifact |
| `localSha256` | SHA-256 of local bytes |
| `localBytes` | Local byte count |
| `artifactClass` | Map, screenshot, plan, database, report, PDF, QA, manifest or Sites source |
| `remoteFolderPath` | Exact Box folder |
| `remoteFileName` | Exact Box name |
| `boxFileId` | Opaque Box object ID |
| `remoteBytes` | Remote byte count |
| `remoteSha256` | Remote content hash and algorithm |
| `uploadedAtUtc` | Upload completion |
| `verifiedAtUtc` | Read-back verification |
| `verification` | PASS/MISSING/SIZE_MISMATCH/HASH_MISMATCH |

Required batches:

1. control/research documents;
2. accepted build and QA ledgers;
3. maps/floor plans/screenshots;
4. database census/catalog/import;
5. final HTML/PDF;
6. exact Sites source and saved/deployed version record.

Box closeout requires zero missing, size-mismatched, hash-mismatched or unverified entries. Until that ledger exists, the correct phrase is **Box pending**, never “moved to Box.”

DRAFT NOT AS-BUILT

### 13.1 Key artifact register

| Artifact | State | SHA-256 |
|---|---|---|
| `town-expansion-r1-wip2.report.json` | Blocked WIP | `04b1c2dffaac3396c94be5ea3fc30245e9665accabd341f12550515a46eda399` |

The machine register contains the larger artifact manifest and exact evidence state for each item.

---

## 14. Final PM handoff

The program is well beyond “a few buildings.” It is an integrated urban, subsurface, campus, hospitality, entertainment, residential, evidence and publication program. The design work is substantial, but tonight’s honest handoff is:

1. the entire request set is now controlled and traceable;
2. major research/design and a very large offline WIP exist;
3. the current WIP is blocked and cannot be released;
4. the latest theater/owner-corridor/city work is cleanly surveyed and implementation-ready at coordinate level, but not generated;
5. B01 is implemented in source only, not in an accepted operation package;
6. DSM/Phase 0/holdout controls are still finishing and remain non-live;
7. no new town-expansion post-state, database import, matched after media, Sites version or Box verification exists yet; and
8. the release sequence above is the source of truth for finishing without losing the requested detail or fabricating completion.

DRAFT · NOT AS-BUILT

DRAFT — NOT AS-BUILT — LIVE CLOSEOUT GATES PENDING

# July 28 Town Expansion — Durable Session Memory

Document ID: `REDEV-2026-07-28-SESSION-MEMORY-01`
Owner direction captured through: 2026-07-28 UTC
Scope: all redevelopment directions given during the July 28 working session
Document role: durable requirements ledger and future-agent orientation
Current physical-release state: **ACCEPTED TERMINAL SNAPSHOT; CONSOLIDATED POST-RELEASE QA PASS WITH MEDIA**
Current publication state: **FINAL DATABASE IMPORT, CENSUS, DOSSIER, BOX, AND SOURCE-PINNED SITES DEPLOYMENT PASS; INTERNET-PUBLIC SITES ACCESS BLOCKED BY WORKSPACE ADMIN POLICY**
Current Box state: **BOX_VERIFIED: 585/585 FILES REMOTELY HASH-VERIFIED**

---

## 1. How to use this memory

Read this file before planning, generating, releasing, documenting, or publishing any July 28 town-expansion work. It records owner intent and binding corrections that are easy to lose when work crosses sessions.

This file is not an as-built claim. It has two jobs:

1. preserve what the owner asked for, including exact counts and later corrections; and
2. prevent requested, researched, designed, generated, or preflighted work from being mislabeled as live or accepted.

When implementation evidence changes, update a dated status addendum or the relevant machine ledger. Do not silently rewrite the original requirement. Where an older design source conflicts with a later correction in this file, the correction here controls design intent; an accepted post-release snapshot and transaction ledger control physical truth.

---

## 2. Truth-state vocabulary

| State | Meaning |
|---|---|
| `REQUESTED` | The owner asked for it. No design or construction is implied. |
| `RESEARCHED` | Public sources were reviewed and translated into an original design basis. |
| `SURVEYED` | Existing or candidate geometry was measured from a named immutable source. |
| `DESIGNED` | A program, floor plan, coordinate schedule, or acceptance contract exists. |
| `SOURCE_MODELED` | Generator/source code represents the design. No current operation package is implied. |
| `GENERATED_OFFLINE` | Exact forward and rollback artifacts exist locally. Nothing live is implied. |
| `PREFLIGHTED` | Fresh-source, collision, protected-state, rollback, and parser gates pass. |
| `COMMITTED_LIVE` | A coordinated transaction ledger records successful live execution. |
| `VERIFIED_POST_STATE` | Immutable post-state, movement, capacity, concealment, and media QA pass. |
| `DATABASE_IMPORTED` | Accepted objects and relations were imported with integrity evidence. |
| `SITES_PUBLISHED` | An exact source-pinned Sites version was saved, deployed, and health-checked. |
| `BOX_VERIFIED` | Remote file path, byte count, and content hash match the final local manifest. |
| `SUPERSEDED` | A later owner correction controls and this version must not be implemented. |
| `BLOCKED` | A named gate is failed; do not release. |

An earlier state never implies a later state. In particular:

- source code is not a generated release;
- an offline PASS is not a live result;
- a live transaction is not accepted without independent post-state QA;
- a screenshot is not linked to an object merely because its filename looks similar;
- a healthy predecessor website does not publish the current expansion; and
- a reachable Box connector is not an upload receipt.

DRAFT · NOT AS-BUILT

## 3. Owner operating direction

The owner asked for autonomous, end-to-end execution and does not want repeated approval prompts or repeated stop/start cycles. Agents should make safe, in-scope assumptions, continue through research, engineering, QA, documentation, database, Box, and Sites closeout, and provide concise progress updates. This preference does not waive repository release gates, exact-state guards, platform policy, or destructive-action safety.

The owner explicitly authorized parallel research and implementation teams, including additional independent reviews and technical debate when a design is difficult or contradictory. Program-management traceability is required for every request.

The owner also directed:

- do the complete agreed scope, not a reduced “good enough” version;
- preserve the frozen counts and check them periodically;
- perform a second visual and functional pass on every new build;
- if a building or room is materially miscalculated, report the finding before changing it;
- take detailed notes and generate enough documentation for extensive owner review; and
- keep this memory callable in future sessions so no requirement is lost.

---

# 4. Binding corrections and supersessions

These corrections override earlier prospective designs.

| ID | Binding correction | Supersedes |
|---|---|---|
| SUP-001 | Every residential garage is physically attached to its parent house. Every large house receives a four-car or six-car attached garage. | Detached-garage concepts and token paved/canopy links. |
| SUP-002 | The five Worker Town manager mini-mansions also need surveyed vehicle access and real attached garages. Their current zero-automotive-garage schedule is not accepted. | Treating the five-cottage schedule as complete. |
| SUP-003 | The civic pavilion is Russian-referenced, original architecture, not a glass pavilion. | Glass-pavilion language. |
| SUP-004 | “Extend Ravensgate” was corrected to mean extend the civic pavilion/grounds east. Ravensgate itself remains a deliberately restricted, deeply buried complex. | Any surface expansion of Ravensgate. |
| SUP-005 | New owner and private tunnel work must not use the T2b tunnel specification. Use the modern underground corridor standard. | Applying T2b to new owner routes. |
| SUP-006 | DSM10 is an ordinary member of the Microsoft/DSM-style surface campus. The InfoBunker-inspired facility is a separate underground annex reached from a secure connection; it is not DSM10. | Conflating DSM10 and InfoBunker. |
| SUP-007 | The Microsoft campus has two different 200-seat rooms: one 200-seat presentation theater/auditorium and one 200-seat movie theater, connected as distinct doors/rooms. | Treating them as one room. |
| SUP-008 | The corrected Microsoft/DSM-inspired modeled register has exactly 24 slots: DSM1–18 and DSM40–45. Do not infer 45 buildings from the numbering jump. | The earlier ten-building interpretation and invented DSM19–39. |
| SUP-009 | EdgeBCC is owned by LightEdge Solutions. Use the name `EdgeBCC`, not EdgeConneX. | Incorrect ownership/name. |
| SUP-010 | Meta-, Google-, and LightEdge-inspired Iowa precincts are full-build targets now: 12 + 6 + 2 completed, walkable fictional data buildings. | The earlier Phase 0 outline-only plan. |
| SUP-011 | Concord Broadcast Exchange satellite count is exactly nine dishes: one large, four medium, and four small. | Preliminary three-dish or other dish counts. |
| SUP-012 | The bunker arena/stadium program is removed. | Stadium/arena inside C01. |
| SUP-013 | The bunker high bay is not an aircraft hangar because it has no runway connection. It is an underground vehicle-storage and multiuse high bay with a large vehicle door. | All aircraft-hangar naming, aircraft program, and runway assumptions in `c01-hangar-eoc-adult-wing-redesign-source-of-truth.md`. |
| SUP-014 | The entire bunker complex is underground. Only the observatory and the owner penthouse/visible estate crown are above ground on a natural-looking mountain. No exposed bunker concrete shell is allowed. | Any visible bunker high bay, bunker block, or artificial concrete projection. |
| SUP-015 | Non-graphic adult rooms must still look fully designed and usable: distinct floor plans, beds or lounge furniture, privacy thresholds, lighting, storage, wash/dressing zones, and themed furniture/fixture silhouettes. | Empty rooms, euphemistic blank boxes, or omission of adult-themed spatial cues. |

---

# 5. Point-in-time status at creation

This table is deliberately conservative.

| DRAFT — NOT AS-BUILT — LIVE CLOSEOUT GATES PENDING | | |
|---|---|---|
| Accepted Redevelopment R1 | `VERIFIED_POST_STATE`; accepted predecessor | Does not prove any town-expansion addition. |
| Accepted Wave 2 | `VERIFIED_POST_STATE`; accepted predecessor | Does not prove any town-expansion addition. |
| Town Expansion WIP2 | `GENERATED_OFFLINE / STALE / BLOCKED` | Not authorized for replay; contains old scope and protected-state problems. |
| Current integrated town-expansion source | `SOURCE_MODELED / IN PROGRESS` | No final fresh-snapshot package, atomic live ledger, or accepted post-state. |
| Latest C01 five-level correction | `REQUESTED`; amendment required | Not represented by the older hangar source, final generator, or live world. |
| Iowa 12 + 6 + 2 full build | `DESIGNED / SOURCE_MODELED`; integration QA pending | Not yet verified live. |
| 24-slot Microsoft/DSM campus | `DESIGNED / SOURCE_MODELED`; integration QA pending | Not yet verified live. |
| Concord Broadcast Exchange | `DESIGNED / SOURCE_MODELED`; compiler integration under review | Not yet verified live. |
| Concord two-soundstage annex | `DESIGNED / SOURCE_MODELED`; collision closure pending | Not yet verified live. |
| Five Worker Town manager mini-mansions | `DESIGNED`; implementation and garage amendment pending | Not yet generated or live. |
| New database objects/media relations | `PENDING` | Point-in-time publication-gap audit recorded zero accepted town-expansion as-builts. |
| Town-expansion maps/screenshots/PDF | `PENDING_POST_STATE_CLOSEOUT` | Baseline/design images are not after evidence. |
| Town-expansion Box handoff | `PENDING_BOX_VERIFICATION` | No remote hash-complete July 28 handoff. |
| Town-expansion Sites update | `PENDING` | Current version 4 is predecessor content. |

Never use this point-in-time table as a permanent claim. Check the newest immutable snapshot, atomic transaction, post-release verifier, database import ledger, Sites version, and Box verification before reporting current status.

---

# 6. Program-wide planning, research, and quality requirements

## 6.1 Urban form and wayfinding

- Deep-research city grid systems and convert the findings into a written source-of-truth paper for engineers.
- Plot the world like a real development: blocks, parcels, streets, alleys, setbacks, frontages, utilities, future plots, phases, and sales/construction markers.
- Survey whether buildings are too close or too scattered.
- Correct the experience of turning a corner and not knowing what place is visible.
- Use landmark hierarchy, view corridors, street addresses, directory signs, named thresholds, and coherent districts.
- Fill gaps so the town reads as blocks, courts, streets, and areas, while retaining required service gaps, views, drainage, and future reservations.
- Terrain must not become a giant flat grass slab or a series of exposed vertical cuts. Use contour-following benches, planted transitions, limited retaining walls, trees, water, and meaningful open space.

## 6.2 Underground and circulation standard

- Standardize tunnel clear width/height, floor/wall/ceiling palette, lighting, drainage, signs, junctions, refuge nodes, airlocks, and access control.
- New private/owner corridors are modern, five blocks clear by five blocks high where the frozen design calls for that profile, well lit, and explicitly not T2b.
- Stairs must be broad, consistent, well lit, have adequate headroom and landings, and work in both directions without jumping or pathfinding hacks.
- Major multi-level buildings use obvious stair halls, paired lifts where specified, readable level directories, and real back-of-house/service routes.
- Ravensgate is deeply buried and deliberately isolated. Civilian, library–Guild, C01, portal, and owner routes may not accidentally intersect it.

## 6.3 Second-pass and evidence standard

Every new or materially altered object requires:

1. before survey and defect statement;
2. reviewed floor plan and room schedule;
3. exact object ID and bounds;
4. guarded forward and rollback operations;

DRAFT · NOT AS-BUILT

6. normal walking to every advertised room;
7. fixed-camera exterior, interior, route, and defect-revealing after images;
8. a second visual/functional pass;
9. documented corrections if the second pass fails; and
10. exact database-to-map-to-floor-plan-to-screenshot relations.

---

# 7. Ravensreach civic and town program

Point-in-time state: `RESEARCHED / DESIGNED / PARTLY SOURCE_MODELED / NOT VERIFIED LIVE`.

## 7.1 Town building and longhouse

- Recheck, redesign, and finish the penthouse on the town building.
- Replace the Amsterdam-style buildings with a longhouse appropriate to the period and material language of the other town buildings.
- Create a deliberate courtyard around the longhouse.
- Fill town gaps with coherent block faces, courts, and service passages.

## 7.2 Library, Russian civic pavilion, and Guild Hall

- Expand the library to at least four times its measured baseline usable area.
- Create a walk-out, two-level concrete terrace from the library down into the civic pavilion.
- Replace glass-pavilion language with an original Russian-referenced civic architecture.
- The spatial sequence is:

  `expanded library ↔ civic pavilion/garth ↔ monumental Guild Hall`
- Extend the civic pavilion and grounds east to the last flat land before the tree line.
- Add trees, flowers, banners, statues, reflecting pools, monumental civic open space, an original Lincoln-Memorial-scale monument, and a block-art interpretation of the *Married... with Children* fountain reference.
- Improve the pavilion itself with more statuary and richer edges; it must be a place, not residual space.

## 7.3 Guild Hall exact program

The Guild Hall is deliberately extravagant and institutionally wealthy. It has:

- two basement levels;
- three above-grade stories;
- dormitories;
- exactly four kitchens;
- living spaces;
- theater;
- lecture hall;
- dance hall;
- a deeply researched, expensive guildhouse bar;
- ceremonial arrival, rich materials, commissioned art, premium lighting, detailed ceilings, and complete service/back-of-house rooms; and
- a seamless physical and visual relationship to the pavilion.

## 7.4 Library–Guild secret archive

- Build one isolated secret tunnel connecting only the library and Guild Hall.
- It does not join Ravensgate, C01, owner tunnels, portal rooms, caves, or the general civilian tunnel system.
- At its bottom, include a challenged/banned-books archive, a private adult literature archive, and an original miniature Ukrainian-subway-inspired ceremonial station room.
- Use controlled vestibules, dry construction, broad usable stairs/lifts where required, signs, egress, and explicit network-isolation proof.

---

# 8. MainStreet/GrandStreet America

Point-in-time state: `MIXED DESIGNED/SOURCE_MODELED / NOT VERIFIED LIVE`. “MainStreet America,” “MainStreet USA,” and the owner’s occasional “GrandStreet America” refer to this same redevelopment area unless an object record proves otherwise.

DRAFT - NOT AS-BUILT

- Bring the scattered warehouse, cooking school, and added buildings closer into the development.
- Complete the road network.
- Put homes on one coherent street, or turn the extra homes toward a second properly built street.
- Every house receives a real attached garage.
- Every large house receives a four-car or six-car attached garage.
- Attachment requires a shared enclosed wall/door relationship and usable vehicle bays; paving, a canopy, or a decorative link is insufficient.

### 8.2 Full parking and underground warehouse

- Recover the complete parking lot after the bunker moves east.
- Size the underground warehouse to the recovered full parking footprint, not the old partial lot.
- Provide a creative, drivable earth descent opposite the relocated bunker entrance.
- The high-bay warehouse includes cars, trucks, campers, RVs, long rack rows, receiving, loading, storage, offices, cafeteria, kitchen, egress, and complete service circulation.
- Include tasteful non-graphic private adult wellness/relief rooms where the frozen program retains them.
- Preserve or explicitly migrate every container and protected block entity.

### 8.3 Guest Services building

The large Guest Services building must become a real multi-level destination:

- reception, orientation, visitor support, and meaningful interior programs;
- work and coworking spaces;
- places to eat and socialize;
- staff and service rooms;
- patios and roof gardens;
- a rooftop pool surrounded by a bar;
- hot-tub lounge and wellness areas;
- separated adults-only private/wellness rooms expressed non-graphically; and
- an employee lounge connected to the Ravensreach worker path.

The roof should feel large and complete enough to be its own mini-attraction. Water containment, roof support, safe edges, stairs/lifts, service, privacy, and two-route access require independent proof.

---

## 9. C01 bunker complex — latest controlling program

Point-in-time state: `LATEST OWNER CORRECTION REQUESTED; OLDER HANGAR SOURCE SUPERSEDED; FINAL SOURCE/OPS/LIVE PROOF PENDING`.

This section is the controlling conceptual brief for the next C01 amendment. The older hangar document remains historical design evidence but may not be implemented as an aircraft hangar.

### 9.1 Siting, surface, and migration

- Move the full bunker complex east far enough to recover the complete MainStreet parking lot.
- If the east move encounters other underground work, redesign both systems so they coexist; do not erase one.
- Use commission-new-before-retire-old migration with protected inventory/NBT, observatory support, route, database identity, and rollback ledgers.
- Place the entrance farther east, away from the lot, with a high-quality terrain-following road down the side of the mountain.
- Recess and airlock the entrance.
- The complete bunker is underground. No concrete cube, roof, wall, or seam may project from the mountain.
- Only the observatory and owner penthouse/visible estate crown are above the natural-looking mountain.
- Perform a 360-degree concealment review plus terrain-cover sections before acceptance.

### 9.2 High bay: underground vehicle garage, not hangar

The former hangar becomes a large underground vehicle-storage and multiuse high bay:

- the large exterior door is a vehicle door connected to the bunker access road, not an aircraft door;
- include cars and trucks with marked parking, service, turning, and walking lanes;
- retain a glazed multi-level support/observation wall if it improves legibility, but its rooms support the garage and bunker;
- no aircraft, aviation-maintenance identity, tow apron, or runway assumption;
- include a selected set of fully built recreation and support rooms around or below the high bay: golf simulator, gaming room, library, music studio, indoor shooting-range analogue, situation room, and guest suites; and
- organize the area with obvious halls, directories, backrooms, stairs, lifts, service circulation, and access to every advertised room.

not real-world weapon instruction.

## 9.3 Binding five-level organization

The bunker must be reorganized so the owner can understand it at a glance and reach every room.

### LEVEL 1 — CONTROLLED ARRIVAL

- security entrance;
- decontamination;
- underground vehicle garage/high bay;
- checkpoints and airlocks;
- orientation concourse and level directory;
- security operations;
- visitor/guest processing;
- obvious public, staff, service, and owner route separations; and
- independent surface egress.

### LEVEL 2 — HABITATION AND RECREATION

- living quarters;
- complete kitchens and dining;
- theater/cinema;
- indoor pool and wellness;
- offices;
- guest suites;
- library;
- gaming room;
- golf simulator;
- music studio;
- lounges and service/back-of-house rooms; and
- broad stairs and paired lifts to the other occupied levels.

### LEVEL 3 — FOOD AND WATER RESILIENCE

- farms;
- protected animal areas;
- food storage;
- seed and tool stores;
- water storage/treatment analogues;
- brewing stations;
- potion storage;
- staff workrooms, washdown, and service circulation; and
- separation of animals, food, clean water, and occupied routes.

### LEVEL 4 — COMMAND, MEDICAL, SECURITY, AND DATA

- command center;
- situation room;
- security operations center connected to alarm and piston-lockdown architecture;
- armory with armor stands, enchanted-equipment display/storage, shields, and secure stores;
- vault;
- medical bay with multiple beds;
- pharmacy/brewing and potion stores;
- quarantine rooms with controlled anterooms;
- server room using iron, glass, redstone lamps, observers, and copper;
- protected staff quarters expressed as a villager trading hall;
- trophy gallery with rare blocks, mob heads, artifacts, and armor sets;
- prison/intruder holding cells with controlled access; and
- communications, evidence/property, records, janitor, plant, and backrooms.

### LEVEL 5 — UTILITIES, ESCAPE, AND LAST REFUGE

- power plant;
- utility distribution and maintenance;
- escape tunnels;
- a contained Nether portal room;
- secondary panic bunker;
- supplies, sanitation, communications, medical cache, and sleeping capacity;
- two independently usable escape directions where the survey permits; and

DRAFT · NOT AS-BUILT

The Level 5 Nether portal is a functional bunker program requirement and is different from the observatory's entirely inactive destination galleries. Its activation state must be explicitly decided and tested in the release schedule; never accidentally create or connect a portal.

## 9.4 Full-envelope classification

- Scan the entire visible old square/base and the selected east replacement envelope.
- Every cell/column must be classified as program, circulation, vertical core, service, structure, protected feature, deliberate surveyed void, or retired legacy.
- Zero unlabeled interior cells, inaccessible advertised rooms, blind cavities, unreviewed overlaps, or unused remainder disguised behind walls.
- The main level must give access to the whole ordinary bunker program. Owner areas can remain controlled, but their thresholds and routes must be real.

## 9.5 Public adult hospitality wing

The stadium/arena is removed. In its place, and in additional newly found space, build a large non-graphic adults-only hospitality/performance program:

- one large open exhibition/theater salon with public-viewing/perimeter hospitality;
- no fake stadium seating or blank screen wall;
- at least four one-to-one rooms;
- at least twelve other individually identified private/themed rooms;
- additional private rooms when space permits, because the owner explicitly doubled this program;
- lounge and bar/service;
- dressing, makeup/wardrobe, wash/cleanup, storage, and staff backrooms;
- separate public and performer routes;
- controlled age/privacy/acoustic vestibules; and
- independent egress.

The previously frozen minimum adult-program footprint of 5,364 classified blocks remains a floor, not a target to shrink toward.

## 9.6 Owner-only deep adult and residential stack

Keep this program physically separate from the public adult wing.

### OWNER CLUB

- large club theater/salon;
- meeting rooms;
- at least twelve private adult rooms;
- lounges, bar/service, dressing, wash, storage, staff, and backrooms;
- controlled grand arrival; and
- separate service and escape circulation.

### OWNER ARRIVAL RESIDENCE

- living room;
- formal dining;
- casual dining;
- private adults-only dining room;
- service kitchen;
- small home cinema;
- ordinary office;
- separate computer office with a twelve-monitor battle station;
- adjacent two-rack micro-datacenter;
- guest wash, coat, pantry, storage, and service rooms; and
- an extravagant main door from the ordinary bunker.

### FIFTEEN-SUITE POLY-LIVING WING

Exactly fifteen master-scale suites. Every suite includes:

- large bedroom;
- ensuite bathroom;
- rainforest/rain-shower analogue;
- walk-in closet;
- sitting area;
- mini office with seating;
- normal front door; and
- separate controlled rear door to the private owner corridor.

DRAFT - NOT AS-BUILT

**OWNER MASTER COMPOUND**

- exactly three large bedrooms, one principal;
- central principal bedroom with a large bed and consent-oriented, non-graphic restraint/furniture silhouettes;
- two kitchens;
- living room;
- formal and casual dining;
- safe room;
- complete bathroom/spa;
- small theater;
- indoor pool;
- hot tub;
- sauna;
- gym;
- computer office;
- library;
- ventilated cigar/smoke-room analogue;
- premium coffee/Starbucks-style bar;
- private circulation to the fifteen-suite rear corridor; and
- back door connected to the dedicated modern owner tunnel.

No human figures, depicted acts, explicit signs, or explicit imagery are part of the build or its screenshots.

---

# 10. Observatory mega-estate and portal gallery

Point-in-time state: `DESIGNED / PARTLY SOURCE_MODELED / NOT VERIFIED LIVE`.

- Expand the observatory building into the owner's extremely lavish personal mega-estate while retaining telescopes and observatory function.
- Make the penthouse an owner mega-mansion with larger and more numerous rooms, premium material/detail, satellite/radio-dish garden, terraces, guest wings, offices, libraries, dining, kitchens, wellness, and service spaces.
- Expand the safe room and fallout shelter with power, utilities, stores, sanitation, communications, medical/quiet space, and two egress routes.
- Keep the observatory and penthouse/estate crown as the only visible developed structures on top of the bunker mountain.
- Preserve telescope views and give the estate an independent structural podium before old bunker supports are retired.

Behind a hidden architectural discovery, create an inactive portal gallery:

- one central portal/map room;
- multiple destination rooms, with one room per district/area;
- district floor maps and themed identities;
- inactive portal frames only;
- unused rooms behind sequential metal doors and `OFFLINE` signs;
- room for future portals without building them now; and
- zero connection to C01, Ravensgate, Raven Rock, the library–Guild tunnel, caves, or unrelated owner routes.

Acceptance requires zero `nether_portal`, `end_portal`, `end_gateway`, or portal-creating mechanisms in these observatory destination rooms.

---

# 11. Worker Town and owner corridor

Point-in-time state: `DESIGNED / COORDINATE SCHEDULES EXIST / NOT VERIFIED LIVE`.

## 11.1 Five manager mini-mansions

The exact current role-cottage census is five:

1. Architect;
2. Mason;
3. Surveyor;
4. Steward; and
5. Scout.

Turn all five into detailed mid-management mini-mansions that fit Worker Town:

- larger usable rooms;
- richer but period-compatible façades;

DRAFT · NOT AS-BUILT

- living, dining, kitchen, office, bedroom, bath, storage, and service;
- landscaping and street relationship;
- furnished, non-graphic private adult/red rooms; and
- protected inventory/NBT migration.

Known siting concerns from the current design review:

- Scout overlaps Market Hall and requires relocation;
- Surveyor is pinched by Storehouse/Moot Hall and requires relocation;
- Mason must avoid the canal;
- Architect and Steward may remain in place if fresh survey passes.

**Open conflict:** the current five-cottage coordinate schedule has no automotive garages. It is not an accepted implementation plan. Before generation, survey a coherent vehicle street/driveway network and amend every mini-mansion with a genuinely attached garage. Classify each house for bay count; any large manager house must receive four or six attached bays under SUP-001.

### 11.2 Gilded Raven Theatre House

Build Worker Town's most expensive traditional theater/cabaret:

- marquee and opulent façade;
- elaborate ceiling, fixtures, balconies, stage, apron, scenery, lighting, control, and orchestra/technical support;
- 168-seat main house;
- five separate five-person salons;
- four one-to-one mini theaters;
- restaurants and premium hospitality around the main room;
- open vomitories and real circulation around the bowl rather than fake doors into dead hallways;
- performer, public, service, and owner routes;
- hidden public and performer rooms;
- two usable egress paths; and
- broad extravagant stairs and adjacent lifts.

Its adult identity is conveyed through architecture, furniture, lighting, privacy, and room planning, never human figures or explicit imagery.

### 11.3 Dedicated owner tunnel and future mini-city

- Build a new, modern owner-only tunnel from the Gilded Raven to the owner master compound in the C01 bunker complex. If its surveyed route meets another protected underground system, redesign the route so both survive.
- It is not the old T2b system and must not connect to T2b.
- Use a five-by-five clear, well-lit, premium corridor with orientation nodes, utilities, refuge, security, and independently usable egress.
- Provide periodic large rest rooms/suites inspired by premium stadium suites; each may have a furnished, non-graphic private adult annex.
- Use extravagant, comfortable terminal stairs and lifts.
- Reserve a future underground owner mini-city at the surveyed location without excavating it.
- Build the sales/reservations office and sealed presentation marker only in the current phase.
- Preserve space for later plots, utilities, roads, phases, and sales inventory.

---

## 12. Stadium road, oasis, Panorama RV district, and mini-bunker

Point-in-time state: `RESEARCHED / DESIGNED / PARTLY SOURCE_MODELED / NOT VERIFIED LIVE`.

- Make the road from town to Westlight wider, ceremonial, readable, and more visually dramatic.
- Add billboards along the route with safe setbacks and readable approaches.
- Build a halfway oasis inspired by Chicago tollway oases, translated into an original Minecraft service/rest destination.
- Build an original game-evocative mini-bunker near the oasis.
- From the oasis roadway, create a long access road to a lavish RV sales lot.
- Display detailed, enterable fictional 29-foot, 39-foot, and 48-foot RVs and campers in multiple rows.
- Build a main customer building, sales building, and repair shop with four semi-size doors.
- Add a Kwik Star–inspired travel center, dive bar, and non-graphic adult club.
- Complete roads, vehicle turning, parking, pedestrian separation, landscaping, service access, signs, lighting, and matched interior/exterior evidence.

---

## 13. Westlight stadium district, venues, island, and waterfront

Point-in-time state: `RESEARCHED / DESIGNED / PARTLY SOURCE_MODELED / NOT VERIFIED LIVE`.

- Make the stadium easy to find from town and every island arrival.
- Every seating bank faces an actual screen or stage, not a doorway or blank wall.
- Align the main district, stadium, pedestrian malls, streets, and pier into one understandable island plan.
- Use wayfinding, landmarks, coherent axes, crossings, plazas, service roads, and landscaped edges.

### 13.2 Three-venue repair

The Westlight Venue has three theaters that currently read ambiguously. Redesign them as three distinct identities with:

- separate public entrances and marquees;
- believable seating and sightlines;
- stages/screens;
- lobbies;
- backrooms;
- basements;
- dressing, control, storage, and service rooms;
- separate egress;
- semi-truck loading and turning; and
- exterior and interior identities that make the three venues unmistakable.

### 13.3 Pier and water

- Turn buildings already over water into intentional pier buildings.
- Build a researched, original amusement pier.
- Add a Ferris wheel and roller coaster.
- Add an outer steakhouse and shrimp/seafood house on opposite sides.
- Complete queues, midway, promenade, rails, lighting, back-of-house, emergency routes, foundations, and service access.
- Preserve and integrate the accepted Westlight infinity screen.

### 13.4 Crater lake and green space

- Fill the crater/hole west of the stadium with a contained designed lake.
- Build a quay around it.
- Blend it into stadium-district green space with paths, trees, planting, seating, lighting, drainage, and public waterfront access.
- Prove water containment, shoreline stability, and no unintended flow after construction.

---

## 14. Westward parks, housing, and workforce link

Point-in-time state: `RESEARCHED / DESIGNED / PARTLY SOURCE_MODELED / NOT VERIFIED LIVE`.

- Deep-research Adventureland Park and Adventure Bay plus Worlds of Fun and Oceans of Fun as precedents, then create original paired dry and water parks facing each other west of the stadium district.
- Extend the approach road farther west.
- Blend both parks with the crater-lake greenbelt.
- Use complete attractions, queues, staff/service, food, restrooms, shade, emergency routes, landscape, and water controls.
- Add several attractive Hampton-influenced medium-density housing projects around the lake while preserving a continuous public waterfront.
- Build two connected, dignified workforce/affordable housing projects in southwest Ravensreach around a central outdoor commons.
- Create a clear, pleasant path from Ravensreach down to the back of the main MainStreet building.
- Build a useful employee lounge at that destination.

---

## 15. Northeast Microsoft/DSM-inspired data campus

Point-in-time state: `RESEARCHED / DESIGNED / SOURCE_MODELED / NOT VERIFIED LIVE`.

This is an original fictional Minecraft campus informed only by public precedent. It must not reproduce real security, power, network, or access geometry.

Site it northeast of the last MainStreet building, away from water, in the center of the broad solid forested land. Continue the district road through this campus and on toward the Meta-, Google-, LightEdge-, and Concord-related programs while retaining future junctions and expansion parcels.

### 15.1 Exact hall register

Build exactly 24 walkable Microsoft/DSM-inspired hall slots:

- DSM40–DSM45.

There are no invented DSM19–DSM39 halls. Public-record construction status and Minecraft completion status are separate fields. Every hall requires:

- staffed/service entrance;
- full-length primary route;
- exactly 40 visibly legible server/rack rows under the frozen design;
- clear hot/cold aisle rhythm;
- support/electrical/cooling language;
- staff and maintenance rooms;
- far-end/secondary egress;
- good interior lighting; and
- exact exterior and interior camera candidates.

Selected fictional colocation rooms may include visually secure ITAR-style cages, but no real sensitive detail.

### 15.2 Campus support

- coherent roads between halls;
- substantial fictional power station/grid and service yards;
- large NOC;
- staff dorm center;
- expansion space marked with construction equipment;
- separate 200-seat presentation auditorium/theater;
- separate 200-seat movie theater;
- a connected shared lobby/back-of-house while each room has its own door and actual screen/stage;
- clear seating, sightline, egress, and capacity counts; and
- service, receiving, storage, maintenance, food, and staff support.

### 15.3 Separate InfoBunker-inspired annex

- DSM10 remains a normal surface hall.
- Behind a controlled DSM10 threshold, a hall may lead to a separate fictional underground resilience annex inspired by the publicly visible InfoBunker story in Ames.
- The annex should evoke an old military bunker with large rooms, data rooms, common areas, NOC, support, and resilient circulation.
- It is a separate database object and envelope.
- Use public appearance/program themes only; do not reproduce sensitive real access, security, or operational details.

### 15.4 Outer aviation/logistics compound

- Build a dirt road from Ravensreach/data road to the new campus.
- Before the main data campus, create a smaller compound with towers, helipad, small airport/airfield identity, and small warehouses full of computer gear.
- Keep hangar/airfield geometry only here, where an exterior aviation relationship makes sense.
- Include roads, loading, storage, offices, security, service, and landscape.

### 15.5 Holdout house

Preserve the medium house whose owner refuses to sell even as the data district grows around it:

- attached four-car garage;
- backyard pool;
- tree playhouse;
- fallout shelter;
- first-floor furnished, non-graphic adult suite with themed kitchen, bedroom/viewing salon, and private room;
- two-room office and lounge;
- driveway, privacy, landscaping, and safe relationship to campus roads and utilities.

---

## 16. Iowa Data District full build and worker commons

Point-in-time state: `FULL BUILD AUTHORIZED; DESIGNED/SOURCE_MODELED; NOT VERIFIED LIVE`.

The earlier outline-only Phase 0 is superseded.

### 16.1 Exact completed data-building count

- Meta Altoona-inspired: exactly 12 completed walkable fictional halls in three four-hall neighborhoods.

DRAFT · NOT AS-BUILT

- LightEdge Solutions EdgeDGC-inspired: exactly 2 completed walkable fictional buildings, each with four legible cold/data quadrants.
- Total: exactly 20 completed data buildings, plus their support buildings.

Each building has a real entrance, far-end route, rack/cage aisles, visible utility/support identity, staff room, lighting, and exterior/interior matched camera candidates.

### 16.2 Roads, landscape, water, power, and future growth

- Build coherent roads and utility/service routes among all three campuses.
- Install a substantial fictional shared power grid with switching, multiple corridors, per-campus substations, operations, storage, and future reserve.
- Retain room to add other campuses along the district road later.
- Grade with contour-following terraces, not a flat slab.
- Dry isolated nuisance water only when reviewed; otherwise retain, dam, or reshape it as useful drainage/pond/green infrastructure.
- Use trees, prairie/groundcover, shelterbelts, courtyards, planted slopes, water, and changing views so the zone feels natural.

### 16.3 Shared worker commons

Build a shared amenity landscape for workers of all three campuses:

- one large naturalized pond between the campuses;
- green space around the pond;
- a winding continuous walking/biking trail linking all three properties;
- trailhead in Concord;
- shelter houses;
- park amenities;
- exactly 18 disc-golf holes;
- the frozen course total is par 58;
- safe fairway/path/road relationships;
- trees, planting, seating, signs, lighting, and drainage; and
- complete map, route, camera, and post-flow evidence.

---

## 17. Concord service town and Broadcast Exchange

Point-in-time state: `DESIGNED / SOURCE_MODELED IN PART / NOT VERIFIED LIVE`.

### 17.1 Concord town

Concord is a fully built small town, not a perimeter outline. It should look ordinary from the road and reveal an intentional consensual-adult nightlife economy serving data-center workers.

Required ordinary frontage:

- gas station/general store;
- small post office;
- neighborhood/dive bar;
- shift-change shuttle stop;
- waiting lounge;
- late-night food;
- planted edge, signs, sidewalks, and no blank backs.

Required adult-oriented court:

- exactly 25 motel rooms, 13 ground and 12 upper;
- motel facing the adult theater across a joint pedestrianized parking court;
- smaller adult theater with exactly 72 main-room seats, three five-person salons, and two one-to-one salons;
- separate non-graphic dance/strip-club venue;
- distinct performer, public, management, and service routes;
- two future entertainment parcels with completed utility/street stubs;
- terraced terrain, drainage, landscaping, and future growth room.

### 17.2 Concord Broadcast Exchange

The Broadcast Exchange is an above/below-ground production and streaming campus that looks more extensive than its ordinary frontage suggests.

Program includes:

DRAFT — NOT AS-BUILT

- gaming/stream rooms;
- general streaming rooms;
- common rooms;
- arcade;
- furnished adult private rooms;
- pool rooms;
- below-grade bondage-themed rooms expressed through non-graphic furniture silhouettes and architecture;
- Moulin-Rouge-inspired exhibition halls;
- coffee shops;
- fictional weed shops and a ventilated sit/smoke lounge without consumption instruction;
- production, offices, makeup/dressing, control, storage, kitchens, dining, plant, security, egress, and backrooms;
- broadcast tower with four usable observation/technical decks;
- satellite pad with exactly nine dishes: one large, four medium, four small; and
- an exact machine room schedule, route set, camera set, and object/media crosswalk.

The accepted design schedule currently calls for 113 base Exchange rooms, five vertical cores, twenty special program components, ten routes, and eighteen cameras. Treat those as fail-closed counts until a later owner correction explicitly changes them.

### 17.3 Two-soundstage upgrade annex

Add a wing that visibly reads as a later movie-studio-style expansion:

- one late-night talk/variety soundstage;
- one sitcom soundstage;
- large unobstructed filming floors;
- audience seating and real sightlines;
- lobbies;
- staff offices;
- talent dressing rooms;
- makeup/wardrobe;
- green rooms;
- control, lighting, scenery, prop, storage, receiving, and service;
- partial two-story support bars along walls;
- glass observation over the open stages;
- stairs only in the support areas, leaving the filming floors open; and
- exterior massing like a coherent studio complex.

The frozen annex schedule presently identifies 84 rooms: 35 late-night, 41 sitcom, and 8 shared; ten site objects; ten routes; and eighteen cameras. Its preliminary integration conflicted with DSM10, DSM12, and the InfoBunker reservation. Those are not acceptable shared interfaces. Relocate or recoordinate the annex so all programs exist with zero unreviewed overlap before release.

---

## 18. Adult-space architecture and furnishing policy

This policy applies everywhere: C01 public wing, C01 owner club/residences, Worker Town Gilded Raven, manager mini-mansions, MainStreet warehouse/Guest Services, Concord nightlife and Broadcast Exchange, holdout home, observatory estate, RV district, and owner-tunnel rest suites.

The binding, testable implementation source is `non-graphic-adult-interior-design-standard.md`. It converts the owner's latest furniture/floor-plan/theme correction into mandatory room anatomy, reusable but non-cloned themes, Minecraft furnishing vocabulary, exact camera requirements, and fail conditions. Use that standard for automated and manual acceptance; this section is its session-level policy summary.

The owner does not expect nudity, anatomy, people, or depicted acts. The owner does expect the rooms to unmistakably feel designed for their adult purpose.

Every retained adult room must have:

- a named room identity and distinct floor plan;
- entry/privacy/acoustic threshold;
- bed, lounge, platform, booth, table, or stage zone as appropriate;
- seating and observer/viewing relationships where the program calls for them;
- dressing area;
- wash/cleanup area or clear adjacency;
- storage;
- service/refreshment function where appropriate;
- layered materials and color;
- layered ambient, task, and accent lighting;
- non-graphic furniture and equipment silhouettes, which may include swings, frames, benches, restraint-themed furniture, screens, curtains, and mirrors;

DRAFT · NOT AS-BUILT

- staff/service/backroom support;
- controlled public/private/performer/owner circulation;
- usable stairs/lifts and two-route egress where required;
- a room-specific furnishing census; and
- a room-specific matched screenshot.

Disallowed:

- people or figures posed as participants;
- visible anatomy or sexual acts;
- explicit text, signs, paintings, maps, or imagery;
- blank rooms passed off as “tasteful”;
- unsafe confinement or inaccessible rooms;
- drug-use instructions or functional harmful mechanisms; and
- real-world tactical/security instructions.

The design vocabulary is hospitality, cabaret, theater, private club, premium suite, red-room furniture, spa, and nightlife architecture.

---

# 19. Documentation, database, maps, Sites, and Box

Point-in-time state: `TOWN-EXPANSION CLOSEOUT PENDING`.

## 19.1 Maps and screenshots

- Generate multiple detailed maps for every district and major building.
- Generate one large map of the entire accepted world/program extent.
- Include surface, underground, floor, route, parcel, utility, water, camera, and future-development layers as appropriate.
- Take more screenshots of exteriors, interiors, routes, stairs, underground spaces, landscapes, water edges, and defects/fixes.
- Use matched camera IDs for before/after and second-pass comparisons.
- Every accepted object gets exact exterior and interior evidence plus floor plan where applicable.

## 19.2 Database

- Produce a read-only report of `data/world-map.db` and `data/town.db`, including schema, row counts, integrity, objects, rooms, routes, observations, media, releases, proposed/superseded/accepted states, and orphan counts.
- Import only verified post-state objects.
- Every screenshot/floor-plan relation records object ID, media ID, camera ID, view class, release ID, source snapshot, path, dimensions, and SHA-256.
- Zero fabricated filename-only matches.
- Regenerate the world catalog after accepted import.

## 19.3 PM dossier and README

- Produce a very detailed PM-style Markdown/HTML/PDF dossier covering all evidenced sessions that day.
- Include chronology, WBS, scope matrix, research sources, design decisions, supersessions, maps, floor plans, screenshots, defect/fix evidence, exact counts, release ledgers, database report, risks, Sites record, and Box record.
- Validate the PDF visually and mechanically.
- Update the repository `README.md` with the current accepted workflow and artifact pointers after closeout.

## 19.4 Box

- Upload every final PDF, screenshot, map, report, machine schedule, database report, and publication artifact to Box.
- Verify remote path, Box file ID, bytes, SHA-256, upload time, and verification time for every file.
- Zero missing or mismatched rows.
- A successful connection or local staging directory is not verification.

## 19.5 Sites

- Update the existing Sites project recorded by the opaque project ID in `world-showcase/.openai/hosting.json`.
- Build from exact committed and pushed source.
- Save a Sites version, deploy only that version, and poll production state.
- Publish maps, screenshots, floor plans, object catalog, database report, district pages, research, PM PDF, and evidence states.
- Add and verify a favicon route.
- Verify root, map, object, database, and report pages return HTTP 200 and Worker logs show `ok`.
- Never expose the Sites bypass bearer token.

DRAFT - NOT AS-BUILT

DRAFT — NOT AS-BUILT — LIVE CLOSEOUT GATES PENDING

At `2026-07-28 02:54:31 UTC`, production returned Cloudflare Error 1101 with Ray ID `a2209982e8a31497`. The predecessor Worker bundle was repaired and published as Sites version 4; the root later returned HTTP 200 with Worker outcome `ok`. That incident must remain in the PM chronology. It does not prove the next town-expansion version is healthy. Re-test production after the next source-pinned deployment.

---

# 20. Release and acceptance contract

No current town-expansion build may be called complete until all applicable gates pass:

1. freeze one authoritative scope, including every correction in this file;
2. resolve generator ownership and all cross-scope overlaps;
3. take one fresh same-moment immutable snapshot;
4. census fluids, neighbor fluids, gravity, block entities, entities/players, protected objects, and missing cells;
5. generate exact guarded forward operations and exact inverse rollback;
6. require zero unauthorized protected block-entity targets;
7. require zero unreviewed cross-scope overrides or package overlaps;
8. pre-support gravity and stage/contain water;
9. run exact-state preflight;
10. run forward and rollback parser dry runs with `--strict-noop --report`;
11. verify practical rollback/compensation order;
12. clear players, bots, and active builders from all target volumes;
13. execute one coordinated transaction in fixed order;
14. freeze the immutable post snapshot;
15. independently verify installed and rollback states;
16. walk all roads, stairs, lifts, tunnels, entrances, and rooms in both directions;
17. verify capacities and exact counts;
18. verify C01 concealment and full-envelope classification;
19. verify water containment, portal states, and network isolation;
20. capture and review all matched after evidence;
21. complete the separate miscalculation/underbuilt second pass;
22. correct defects and recapture evidence;
23. import accepted objects and relations into the databases;
24. generate catalog, maps, screenshots, and PM dossier;
25. update README;
26. upload and hash-verify Box;
27. commit/push exact Sites source, save/deploy a version, and health-check it; and
28. issue one final transaction/database/media/publication acceptance ledger.

---

# 21. Fail-closed exact-count register

| Program | Binding count |
|---|---|
| Residential garages | Attached to every house |
| Large-house garages | 4 or 6 attached bays |
| Worker Town role cottages/manager mini-mansions | 5 |
| Guild Hall | 2 basements + 3 above-grade stories |
| Guild Hall kitchens | 4 |
| Gilded Raven main house | 168 seats |
| Gilded Raven small salons | 5 rooms × 5 guests |
| Gilded Raven one-to-one rooms | 4 |
| Microsoft/DSM hall slots | 24: DSM1–18 + DSM40–45 |
| Rack rows per DSM hall | 40 |
| Microsoft presentation auditorium/theater | 200 seats |
| Microsoft movie theater | 200 seats |
| Meta halls | 12 |
| Google halls | 6 |

DRAFT · NOT AS-BUILT

| DRAFT — NOT AS-BUILT — LIVE CLOSEOUT GATES PENDING | |
|---|---|
| LightEdge EdgeBCC buildings | 2 |
| EdgeBCC quadrants | 4 per building |
| Shared worker disc-golf course | 18 holes, frozen par 58 |
| Concord motel | 25 rooms: 13 ground + 12 upper |
| Concord small theater | 72 main seats |
| Concord theater small salons | 3 rooms × 5 guests |
| Concord theater one-to-one salons | 2 |
| Concord Broadcast Exchange base schedule | 113 rooms |
| Concord Broadcast Exchange dishes | 9: 1 large + 4 medium + 4 small |
| Concord Broadcast Exchange tower decks | 4 |
| Soundstage annex rooms | 84: 35 late-night + 41 sitcom + 8 shared |
| C01 public adult minimum footprint | 5,364 classified blocks |
| C01 public one-to-one rooms | At least 4 |
| C01 other public private/themed rooms | At least 12 |
| C01 owner-club private rooms | At least 12 |
| C01 poly-living suites | Exactly 15 |
| C01 owner master bedrooms | Exactly 3 |
| Observatory destination rooms | 8 in current frozen plan, all inactive |

If a generated report disagrees with this table, stop release and reconcile the owner correction, source document, coordinate schedule, and generator. Do not adjust acceptance downward to make a package pass.

DRAFT · NOT AS-BUILT

- The latest bunker vehicle-garage/five-level organization is newer than the hangar source and requires a source/schedule/compiler amendment.
- The entire bunker must be underground; the observatory/owner penthouse crown needs independent support during C01 migration.
- The five manager mini-mansion schedule currently lacks automotive garages and conflicts with the standing attached-garage requirement.
- Scout, Surveyor, and Mason cottage siting needs the specific corrections listed in section 11.
- The preliminary CBE soundstage reservation collided with DSM10, DSM12, and the InfoBunker reservation. Do not allowlist those collisions.
- The current town-expansion exact package is stale and must be regenerated against a fresh immutable source after all compiler work.
- Old WIP protected-block-entity problems may not be ignored or relabeled.
- C01, the MainStreet warehouse, and the recovered full parking lot must use one coordinated spatial basis.
- The functional Level 5 bunker portal must not be confused with the observatory's entirely inactive portal-gallery frames.
- Box and Sites closeout remain separate proof chains from physical acceptance.

---

# 24. Future-session startup checklist

1. Read this entire file.
2. Read the newest `AGENTS.md` and `CLAUDE.md`.
3. Inspect the newest transaction/post-state/database/Sites/Box ledgers before repeating any status claim.
4. Compare active source documents against section 4 supersessions.
5. Check that C01 is a buried vehicle-garage bunker, not a hangar or stadium.
6. Check exact counts in section 21.
7. Check that every house, including all five manager mini-mansions, has a surveyed attached-garage solution and that large houses have four or six bays.
8. Check that the Iowa campuses are full build, not Phase 0.
9. Check that adult rooms are fully furnished/themed but non-graphic.
10. Continue the gated release, evidence, database, Box, and Sites sequence without promoting unfinished work to accepted status.

---

# 25. 2026-07-28 live-release and incident addendum

This addendum supersedes the older point-in-time release status but does not rewrite any owner requirement above.

## 25.1 Current transaction truth

- Town Expansion forward execution committed 484,676 of 484,676 source groups with 484,690 changed commands, zero no-ops, and zero failures.
- Transaction ledger: `data/world-review/town-expansion-r1-atomic-transaction-full-source-restored-retry-20260728.json`
- Forward execution: `data/buildops/town-expansion-r1-2026-07-28.execution.json`
- Terminal immutable block-state snapshot after the committed accessibility, citizen-clearance, carpet-source, and ridge-recovery supplements: `data/worldsnap-town-terminal-recovery-post-20260728T1839Z/region` (`c39d0d67c9dec737aa5807cf5fa56a84f3c3d38d4b13d0f82599d3eb30fa6751`).
- Consolidated post-release QA binds the base transaction and all three ordered supplemental transactions, passes all twelve gates, and reports `ACCEPTED`. It covers five packages, 3,665,580 unique target cells, all 22 representative routes, and all 1,178 accepted media captures.
- The guarded database closeout committed 340 exact objects, one accepted scan, 340 observations, and 1,152 media relations. The independent read-only census passes with database SHA-256 `71876a7ecf73e90475a9b5047938e14f39ea0a20381dea8c5286582059f95f8a`.
- The physical/media/database release is accepted. The citizen lifecycle runtime defect remains a separate follow-up: connected resident health does not yet prove structured work/life completion or five exact round trips.
- The final as-built dossier was generated. The bounded Box handoff remotely verified all 585 files with zero failures, including a separately uploaded and hash-bound verification report.
- Source-pinned Sites version 6 deployed successfully with its ten-digit PIN gate and signed HTTP-only session. Internet-public access remains blocked by workspace policy, so anonymous visitors encounter the ChatGPT Sites access layer before the application PIN until a workspace administrator enables public Sites.

## 25.2 Rollback counting policy and exact recap

The durable release knowledge base counts:

- **6 atomic rollback incidents**: one July 27 multi-package redevelopment incident, four July 28 Town Expansion base-release transactions, and one July 28 Town Expansion accessibility-repair transaction.
- **11 rollback/recovery executions**: eight complete, three failed, none in progress.

The eleven executions are:

DRAFT — NOT AS-BUILT

2. July 27 Raven Rock component rollback — complete.
3. July 27 Westlight component rollback — complete.
4. July 28 obsolete-hash generic rollback — failed.
5. July 28 exact prefix-10 recovery — complete.
6. July 28 frozen-rebase generic rollback — failed.
7. July 28 exact prefix-13 recovery — complete.
8. July 28 complete-state generic rollback — failed.
9. July 28 exact prefix-123 recovery — complete, with later-discovered reactive short-grass drift outside the successful-prefix proof.
10. July 28 full Paper-strict rollback — complete: 484,635 groups, zero failures, followed by a fresh 483,016-of-483,016 source preflight.
11. July 28 accessibility-repair prefix-566 recovery — complete: 566 groups, zero failures, followed by a fresh 1,530-of-1,530 source-restoration preflight.

The sixth incident occurred after the initial KB rebuild: a generated stair replacement differed from its source only by serialized property order, so Paper correctly rejected it as a semantic strict no-op at source group 567. The runner stopped after 566 changes; the recovery reversed only those 566 journal-proven groups. Generator and preflight canonicalization is now a required prevention control (`RCS-022`).

Canonical source: `data/knowledge-base/redevelopment-release-incidents.json`

Searchable SQLite: `data/knowledge-base/redevelopment-kb.sqlite`

Integrity/artifact audit: `data/knowledge-base/redevelopment-kb.report.json`

Human ledger: `knowledge-base/incident-ledger.md`

The database rebuild generated at `2026-07-28T22:04:06.879Z` passes SQLite integrity, has zero foreign-key errors, zero orphan occurrence-artifact links, and zero missing evidence artifacts. The current revision contains six incidents, eleven recovery executions, seventeen QA defects, thirty-seven separately counted error occurrences, thirty prevention rules, and 126 evidence artifacts. It rejects misplaced incident/QA IDs, duplicate rows, count/status/group mismatches, missing artifacts, paths outside the repository, generated-output self-references, missing prevention-rule references, and input drift before atomically replacing the prior database.

## 25.3 Open and resolved post-QA defects

The KB separately records seventeen post-QA defects so they do not inflate or hide the six rollback incidents:

- `QA-20260728-01` — resolved and verified: fourteen unwaxed cut-copper cells advanced to exposed cut copper after unfreeze. Exact rollback-only policy evidence preserves the canonical operation bytes.
- `QA-20260728-02` — resolved: a half-block map center caused fractional Anvil lookups and a blank Data District map. Integer-center rendering is verified.
- `QA-20260728-03` — offline repair verified, live gate pending: the obsolete citizen commute failed at physically occupied checkpoints. Terminal route geometry passes, but citizen runtime lifecycle acceptance remains separate.
- `QA-20260728-04` — resolved: the route failure-map renderer dereferenced a null physical-width record and crashed. It now emits terminal failure evidence.
- `QA-20260728-05` — resolved and verified: rejected low-information C01, sales-office, and Gilded Raven frames are preserved. The terminal v6 render passes 1,178 of 1,178 captures and paired media QA is accepted.
- `QA-20260728-06` — resolved: the first media defect was briefly placed in the incidents array. Count/classification validation rejected the malformed KB; it was moved to the QA collection before the database was rebuilt.
- `QA-20260728-07` — resolved: Sites version 3 returned Worker Error 1101, Ray `a2209982e8a31497`. Version 4 bundled the OpenNext worker and the production root returned HTTP 200.
- `QA-20260728-08` — implemented, production verification blocked: Sites version 6 includes an explicit favicon route and passes the local production build check. Anonymous production verification is blocked by the workspace access layer.
- `QA-20260728-09` — historical/not reexecuted: the predecessor bunker Phase 1 manifest correctness defect is retained as historical evidence and not misrepresented as a current rerun.
- `QA-20260728-10` — resolved and verified: the archived baseline passed only fourteen of twenty-two routes. Accessibility attempt 2 committed 1,526 of 1,526 guarded cells, and terminal as-built QA against the final snapshot now passes twenty-two of twenty-two routes, forty-four of forty-four directions, and all four isolation contracts with no projection or overlay.
- `QA-20260728-11` — resolved and verified: the KB builder now performs fail-closed artifact/path/self-reference validation, rehashes inputs before atomic replacement, records separately counted occurrences, and has passed independent SQL integrity and orphan-link checks.
- `QA-20260728-12` — resolved and verified: the final verifier and database importer bind the base plus three ordered supplemental transactions, logical source overlay, rollback policy, and terminal snapshot.
- `QA-20260728-13` — open runtime follow-up: the five residents remain healthy but the twenty-minute observer did not prove structured work/life outcomes or five exact round trips. This does not invalidate accepted physical, media, or database evidence.
- `QA-20260728-14` — resolved and verified: two complete media verifications were OOM-killed by accumulating native image surfaces. Reusable serialized surfaces and a bounded runner reduced the accepted rerun to 182,480 KB peak RSS without changing image metrics.
- `QA-20260728-15` — resolved and verified: map records no longer inherit perspective FOV, and consolidated QA resolves relative outputs beside the bound renderer report.
- `QA-20260728-16` — resolved and verified: database parent census now scopes in-registry IDs to the accepted project. The final read-only census passes 340 features, 340 observations, and 1,152 media relations.
- `QA-20260728-17` — external administrator blocked: source-pinned Sites version 6 deployed successfully, but workspace policy rejected internet-public access. The owner-only deployment remains healthy and the separate Box handoff is remotely verified.

Sites internet public access policy and citizen lifecycle follow-up remain open. Neither is conflated with the accepted Town Expansion snapshot.

### 25.4 Citizen activation tooling

The activation scripts are rebound to terminal snapshot `71f52acf04f4974557fcc23e7cb02d81d76ed17cbab41bcc78ff9846cba1045d` and exact path `9fe7e7bae1c2fde2243ee42a7322d2a8ac763042a9bc8eef69f44adce71ca701`. The corridor phase is active and all five bots are connected, but autonomous shifts remain paused. Three fresh live-walk attempts are retained:

- `20260728T165823Z` passed all 49 forward checkpoints and failed reverse checkpoint 13 at the final lip.
- `20260728T171521Z` failed forward checkpoint 25 after an over-broad no-progress recovery fired during long-range planning. The recovery is now range-bounded and the focused tests/backend build pass.
- `20260728T172625Z` failed closed during staging because Surveyor remained on the prior attempt's shoulder at `[-79,68,-32]` and could not path to `[-82,65,-19]`.
- `20260728T180433Z` proved the one-cell leaf-clearance repair by staging from that exact shoulder and passing all forty-nine forward checkpoints. It still failed reverse checkpoint 13 at the road crown because production movement allowed parkour while the certified route contract explicitly forbids it.

All four failures recorded zero digging and no security incident. The exact head-height leaf was removed by a one-cell exact-guarded transaction with a one-cell inverse rollback. Production movement is now aligned to the declared no-parkour safety model, focused tests and the backend build pass, and the managed service is restarting for another full bidirectional gate. No schedule mutation is allowed without a matching `PASS_BIDIRECTIONAL` live audit containing all 49 forward and 49 reverse receipts, zero digging, and no security incidents.

---

## 26. Mandatory postmortem reminder

At terminal release closeout, remind the owner to launch the full fan-out postmortem captured in `POSTMORTEM_HANDOFF.md`. It must explain why the work took so long, audit preventable rework and coordination failures, and decide which atomic-release, route, media, KB, PDF, Box, and Sites tooling should be built in-house.

DRAFT · NOT AS-BUILT

# Town Expansion Requirements and Status Matrix

Mode: **DRAFT**
Status: **DRAFT_NOT_AS_BUILT**
Requirements: **98**
Final documentation gate: **FAIL**

> Draft mode is preparation evidence only. It is not a live, verified, imported, final, or as-built claim.

## Closeout gates

| Gate | Result | Evidence |
|---|---|---|
| Canonical compiler report, ownership manifest and forward package exist and agree | PASS | `data/buildops/town-expansion-r1-2026-07-28.txt` |
| One canonical transaction is committed with strict-noop success | FAIL / PENDING | `see machine matrix` |
| Immutable post snapshot exists, differs from prerelease and matches post QA | FAIL / PENDING | `see machine matrix` |
| Bound live entity/player clearance report passed without mutation | FAIL / PENDING | `see machine matrix` |
| Independent post-release QA reports PASS and ACCEPTED | FAIL / PENDING | `see machine matrix` |
| Paired post media passed, binds post/package/crosswalk, and supplies 13 maps | FAIL / PENDING | `see machine matrix` |
| Atomic database closeout imported every verified registry object | FAIL / PENDING | `see machine matrix` |
| Read-only database publication census passed against the accepted post state | FAIL / PENDING | `see machine matrix` |

| DOC-011 | Documentation | Use PM management and traceability for every request. | IN_PROGRESS | IN_PROGRESS |
| URB-001 | Program-wide | Correct spacing and legibility so turns reveal understandable places rather than unexplained clutter. | DESIGNED_PARTIAL | DESIGNED_PARTIAL |
| URB-002 | Program-wide | Fill town gaps so the settlement reads as blocks, courts, areas and coherent streets. | MODELED_BLOCKED | MODELED_BLOCKED |
| TUN-001 | Program-wide underground | Standardize tunnel profiles, junctions, finishes, signage, lighting, drainage and access control. | RESEARCHED_PARTIAL | RESEARCHED_PARTIAL |
| TUN-002 | Program-wide underground | Make every stair and stairwell easy to walk. | DESIGNED_PARTIAL | DESIGNED_PARTIAL |
| TUN-003 | Owner underground | Create a dedicated modern owner tunnel that is explicitly not T2b. | IMPLEMENTATION_READY_COORDINATE_PLAN_NOT_GENERATED | IMPLEMENTATION_READY_COORDINA |
| TUN-004 | Owner underground | Provide high-finish owner rest nodes and extravagant stair/lift circulation. | IMPLEMENTATION_READY_COORDINATE_PLAN_NOT_GENERATED | IMPLEMENTATION_READY_COORDINA |
| TUN-005 | Owner underground | Keep owner underground movement private, secure, legible and independently escapable. | REQUESTED | REQUESTED |
| CIRC-003 | Major civic/owner buildings | Use extravagant but usable stairs and lifts in the Guild Hall, owner estate, adult theater and owner tunnel nodes. | GUILD_MODELED_BLOCKED_OWNER_AND_THEATER_IMPLEMENTATION_READY_COORDINATE_PLAN | GUILD_MODELED_BLOCKED_OWNER |
| MSA-001 | MainStreet America | Bring far-flung added buildings, warehouse and cooking school into a coherent compact development. | DESIGNED_PARTIAL | DESIGNED_PARTIAL |
| MSA-002 | MainStreet America | Complete the roads and place homes on one coherent street or on two properly fronted streets. | DESIGNED_PARTIAL | DESIGNED_PARTIAL |
| MSA-003 | MainStreet America | Attach a garage to every residential house. | MODELED_BLOCKED | MODELED_BLOCKED |

DRAFT · NOT AS-BUILT

| DRAFT — NOT AS-BUILT — LIVE CLOSEOUT GATES PENDING | | | | |
|---|---|---|---|---|
| MSA-004 | MainStreet America | Give every large house a four-car or six-car attached garage. | DESIGNED_AND_MODELED_BLOCKED | DESIGNED_AND_MODELED_BLOCKE |
| MSA-005 | MainStreet America | Integrate warehouse and cooking-school/service buildings with the street grid. | DESIGNED_PARTIAL | DESIGNED_PARTIAL |
| MSA-006 | MainStreet America B01 | Create Guest Services with reception/orientation, coworking, food/social functions and outdoor connections. | IMPLEMENTED_MODEL_ONLY_VALIDATED | IMPLEMENTED_MODEL_ONLY_VALIDA |
| MSA-007 | MainStreet America B01 | Add patios, roof gardens, hot tubs, rooftop pool/bar and separated adults-only wellness/private areas. | IMPLEMENTED_MODEL_ONLY_VALIDATED_PENDING_GENERATION_AND_INDEPENDENT_QA | IMPLEMENTED_MODEL_ONLY_VALIDA |
| MSA-008 | MainStreet America/Worker link | Build a direct Ravensreach-to-rear-MainStreet staff path and employee lounge. | MODELED_BLOCKED_AND_REBASE_REQUIRED | MODELED_BLOCKED_AND_REBASE_R |
| MSA-009 | MainStreet subsurface | Expand the underground warehouse while recovering the full parking footprint. | DESIGNED_AND_MODELED_BLOCKED | DESIGNED_AND_MODELED_BLOCKE |
| MSA-010 | MainStreet subsurface | Create an RV sales/customer district with support, pantry/club and tasteful private adult option if retained. | DESIGNED | DESIGNED |
| C01-001 | C01/P01 | Move the entire bunker east far enough to restore the complete parking lot. | DESIGNED_AND_MODELED_BLOCKED | DESIGNED_AND_MODELED_BLOCKE |
| C01-002 | C01/P01 | Create a high-quality terrain-following road down the mountain side. | DESIGNED_PARTIAL | DESIGNED_PARTIAL |
| C01-003 | C01/P01 | Move and recess the bunker entrance. | DESIGNED_AND_MODELED_BLOCKED | DESIGNED_AND_MODELED_BLOCKE |
| C01-004 | C01/P01 | Keep the entire bunker underground with no concrete shell showing. | DESIGNED_AND_MODELED_BLOCKED | DESIGNED_AND_MODELED_BLOCKE |
| C01-005 | C01/P01 | Preserve/rebuild the complete bunker program, routes and independent egress. | DESIGNED_AND_MODELED_BLOCKED | DESIGNED_AND_MODELED_BLOCKE |
| C01-006 | C01/P01 | Hide all visible structural blocks in the mountain landscape. | DESIGNED_PARTIAL | DESIGNED_PARTIAL |
| RRCH-001 | Ravensreach | Recheck, redesign and finish the penthouse on the town building. | MODELED_BLOCKED | MODELED_BLOCKED |

DRAFT · NOT AS-BUILT

| DRAFT — NOT AS-BUILT — LIVE CLOSEOUT GATES PENDING | | | | |
|---|---|---|---|---|
| RRCH-002 | Ravensreach | Replace the Amsterdam buildings with a longhouse appropriate to the town period. | RESEARCHED_DESIGNED_AND_MODELED_BLOCKED | RESEARCHED_DESIGNED_AND_MOD |
| RRCH-003 | Ravensreach | Create a designed courtyard around the longhouse and civic ensemble. | MODELED_BLOCKED | MODELED_BLOCKED |
| RRCH-004 | Ravensreach | Make the library four times as big. | DESIGNED_AND_MODELED_BLOCKED | DESIGNED_AND_MODELED_BLOCKEI |
| RRCH-005 | Ravensreach | Add a two-level concrete walk-out patio/terrace from the library down into the pavilion. | MODELED_BLOCKED | MODELED_BLOCKED |
| RRCH-006 | Ravensreach | Build a larger-than-life Guild Hall opposite the library across the pavilion. | RESEARCHED_DESIGNED_AND_MODELED_BLOCKED | RESEARCHED_DESIGNED_AND_MOD |
| RRCH-007 | Ravensreach | Give the Guild Hall two basement levels, three stories, dormitories, four kitchens, living spaces, theater, lecture hall, dance hall and bar. | RESEARCHED_DESIGNED_AND_MODELED_BLOCKED | RESEARCHED_DESIGNED_AND_MOD |
| RRCH-008 | Ravensreach | Research and create a guildhouse bar that looks expensively commissioned. | RESEARCHED_DESIGNED_AND_MODELED_BLOCKED | RESEARCHED_DESIGNED_AND_MOD |
| RRCH-009 | Ravensreach | Blend library, pavilion and Guild Hall into one civic composition and add statues. | DESIGNED_AND_MODELED_BLOCKED | DESIGNED_AND_MODELED_BLOCKEI |
| RRCH-010 | Ravensreach | Make the pavilion grounds more monumental with gardens, pools, statues and civic features. | DESIGNED_AND_MODELED_BLOCKED | DESIGNED_AND_MODELED_BLOCKEI |
| RRCH-011 | Ravensreach underground | Provide a separate library-to-Guild Hall secret tunnel with challenged-materials archive, private adult literature archive and ceremonial room. | DESIGNED_AND_MODELED_BLOCKED | DESIGNED_AND_MODELED_BLOCKEI |
| RRCH-012 | Ravensreach underground | Keep civilian pavilion/library/Guild tunnels out of the restricted Ravensgate underground volume. | DESIGNED_AND_OFFLINE_PASS | DESIGNED_AND_OFFLINE_PASS |
| STAD-001 | Town-to-stadium | Make the road to the stadium bigger and more over the top. | DESIGNED_AND_MODELED_BLOCKED | DESIGNED_AND_MODELED_BLOCKEI |
| STAD-002 | Town-to-stadium | Place billboards along the stadium road. | MODELED_BLOCKED | MODELED_BLOCKED |
| STAD-003 | Westlight stadium | Ensure stadium seating faces a real screen rather than a doorway or blank wall. | DESIGNED_PARTIAL | DESIGNED_PARTIAL |

DRAFT · NOT AS-BUILT

| | | | | |
|---|---|---|---|---|
| STAD-004 | Westlight stadium | Make the stadium easy to find. | DESIGNED_PARTIAL | DESIGNED_PARTIAL |
| OASIS-001 | Town-to-stadium | Build a halfway oasis inspired by Chicago tollway oases. | RESEARCHED_DESIGNED_AND_MODELED_BLOCKED | RESEARCHED_DESIGNED_AND_MOD |
| OASIS-002 | Town-to-stadium | Build an original mini-bunker at the oasis with a GTA V–evocative feel. | DESIGNED_AND_MODELED_BLOCKED | DESIGNED_AND_MODELED_BLOCKEI |
| WL-001 | Westlight | Make the stadium complex and island read as one coherent destination. | DESIGNED_AND_MODELED_BLOCKED | DESIGNED_AND_MODELED_BLOCKEI |
| WL-002 | Westlight | Add intentional buildings along the pier. | DESIGNED_AND_MODELED_BLOCKED | DESIGNED_AND_MODELED_BLOCKEI |
| WL-003 | Westlight | Create a researched original amusement pier. | RESEARCHED_DESIGNED_AND_MODELED_BLOCKED | RESEARCHED_DESIGNED_AND_MOD |
| WL-004 | Westlight | Add a Ferris wheel and roller coaster. | MODELED_BLOCKED | MODELED_BLOCKED |
| WL-005 | Westlight | Add paired steak and shrimp/seafood houses. | DESIGNED_AND_MODELED_BLOCKED | DESIGNED_AND_MODELED_BLOCKEI |
| WL-006 | Westlight | Align the main district, pier and stadium pedestrian malls/streets. | DESIGNED_AND_MODELED_BLOCKED | DESIGNED_AND_MODELED_BLOCKEI |
| WL-007 | Westlight | Create a contained crater lake with quay and green space. | DESIGNED_AND_MODELED_BLOCKED | DESIGNED_AND_MODELED_BLOCKEI |
| WL-008 | Westlight | Preserve and integrate the accepted Westlight infinity screen. | ACCEPTED_PREDECESSOR_WITH_NEW_INTERFACE_PENDING | ACCEPTED_PREDECESSOR_WITH_NE |
| WEST-001 | Westward | Build paired facing dry and water parks informed by named precedents but original in design. | RESEARCHED_DESIGNED_AND_PARTLY_MODELED_BLOCKED | RESEARCHED_DESIGNED_AND_PART |
| WEST-002 | Westward | Extend the road west and integrate it with the crater-lake greenbelt. | DESIGNED_AND_MODELED_BLOCKED | DESIGNED_AND_MODELED_BLOCKEI |
| WEST-003 | Westward | Create Hampton-style medium-density lakeside housing with continuous public waterfront relationship. | DESIGNED_PARTIAL | DESIGNED_PARTIAL |
| WEST-004 | Southwest Ravensreach | Build two connected, dignified workforce/affordable housing projects centered on useful outdoor space. | DESIGNED_AND_MODELED_BLOCKED | DESIGNED_AND_MODELED_BLOCKEI |

DRAFT · NOT AS-BUILT

| DRAFT — NOT AS-BUILT — LIVE CLOSEOUT GATES PENDING | | | | |
|---|---|---|---|---|
| WORK-001 | Worker Town | Upgrade steward cottages into mini-mansions, including the current cottage. | DESIGNED_AND_MODELED_BLOCKED | DESIGNED_AND_MODELED_BLOCKEI |
| WORK-002 | Worker Town | Add an architecturally rich adult theater/cabaret with non-graphic programming. | IMPLEMENTATION_READY_COORDINATE_PLAN_NOT_GENERATED | IMPLEMENTATION_READY_COORDINA |
| WORK-003 | Worker Town | Give the adult theater extravagant stairs/lifts and high-end arrival/detail. | IMPLEMENTATION_READY_COORDINATE_PLAN_NOT_GENERATED | IMPLEMENTATION_READY_COORDINA |
| DATA-001 | Northeast data campus | Maintain a corrected 24-slot public-record-supported DSM campus register and distinguish built, approved and planned status; never infer 45 completed facilities from numbering jumps. | CORRECTED_REGISTER_PENDING_MACHINE_EVIDENCE | CORRECTED_REGISTER_PENDING_M |
| DATA-002 | Northeast data campus | Provide NOC, power/support, 48-bed dorms, aviation and computer-logistics compound. | RESEARCHED_DESIGNED_AND_MODELED_BLOCKED | RESEARCHED_DESIGNED_AND_MOD |
| DATA-003 | Northeast data campus | Create separate 200-seat presentation auditorium and 200-seat cinema with seats facing actual screens. | DESIGNED_AND_MODELED_BLOCKED | DESIGNED_AND_MODELED_BLOCKEI |
| DATA-004 | Northeast data campus | Keep DM10 a normal surface data hall and place a separate InfoBunker-inspired annex. | DESIGNED_AND_MODELED_BLOCKED | DESIGNED_AND_MODELED_BLOCKEI |
| DATA-005 | Northeast data campus holdout parcel | Preserve a medium older personal home beside the campus road while the data district grows; add an attached four-car garage, backyard pool/treehouse, fallout shelter, first-floor tasteful non-graphic adult suite/service kitchen/bedroom-viewing salon/private room, and two-room office/lounge. | REQUESTED_EVIDENCE_PENDING | REQUESTED_EVIDENCE_PENDING |
| DATA-006 | Iowa Data District Phase 0 | Tonight, extend district roads and build only construction perimeters, low future-wall/foundation outlines, walkable gates and block-art project billboards for three future precincts. | RESEARCHED_AND_PLANNED_PHASE_0 | RESEARCHED_AND_PLANNED_PHASE |
| DATA-007 | Iowa Data District Phase 0 — Meta Altoona-inspired | Reserve twelve future hall envelopes in three four-building neighborhoods with operations green, service loop, staff walk, prairie and utility reservations. | RESEARCHED_AND_PLANNED_UNBUILT | RESEARCHED_AND_PLANNED_UNBU |

DRAFT · NOT AS-BUILT

| | | | | |
|---|---|---|---|---|
| DATA-008 | Iowa Data District Phase 0 — Google Council Bluffs-inspired | Reserve six fictional future halls, two utility envelopes, operations/staging support, separate gates, stormwater demonstration outline and expansion reserve. | RESEARCHED_AND_PLANNED_UNBUILT | RESEARCHED_AND_PLANNED_UNBU |
| DATA-009 | Iowa Data District Phase 0 — LightEdge EdgeBCC Altoona-inspired | Reserve two future EdgeBCC buildings with four quadrants each, recovery/admin outline and compact service court. | RESEARCHED_AND_PLANNED_UNBUILT | RESEARCHED_AND_PLANNED_UNBU |
| DATA-010 | Iowa Data District Phase 0 — terrain and long-range structure | Continue a coherent district spine beyond all three precincts with future junctions, a green/utility reserve and at least two unassigned future-campus parcels; grade with contour-following terraces and classify water before altering it. | RESEARCHED_AND_PLANNED_UNBUILT | RESEARCHED_AND_PLANNED_UNBU |
| DATA-011 | Iowa Data District Phase 0 — shared power backbone | Build a legible fictional district-energy Phase 0 with one shared switching yard, two independent-looking transmission corridors, one substation yard/reservation per Meta/Google/EdgeBCC precinct, a continuing utility corridor and marked future storage/operations capacity. | RESEARCHED_AND_PLANNED_PHASE_0 | RESEARCHED_AND_PLANNED_PHASE |
| DATA-012 | Microsoft/DSM-inspired data campus | Expand the fictional completed-hall target from the old ten-hall WIP to exactly 24 DSM slots, while keeping public-source built/approved/planned status separate from Minecraft completion state. | TARGET_CORRECTED_COORDINATES_AND_GENERATION_PENDING | TARGET_CORRECTED_COORDINATES |
| OBS-001 | Observatory | Build an over-the-top owner mega-estate around the observatory. | DESIGNED_AND_MODELED_BLOCKED | DESIGNED_AND_MODELED_BLOCKE |
| OBS-002 | Observatory | Expand the owner safe room and shelter. | DESIGNED_AND_MODELED_BLOCKED | DESIGNED_AND_MODELED_BLOCKE |
| OBS-003 | Observatory | Create owner portal rooms/gallery while keeping every portal entirely inactive. | DESIGNED_AND_MODELED_BLOCKED | DESIGNED_AND_MODELED_BLOCKE |
| OBS-004 | Observatory | Include owner wellness, pool and tasteful private non-graphic red-room program. | DESIGNED_PARTIAL | DESIGNED_PARTIAL |
| CITY-001 | Future owner underground city | Reserve protected space for a future mini-city. | IMPLEMENTATION_READY_RESERVATION_PLAN_DO_NOT_EXCAVATE | IMPLEMENTATION_READY_RESERVAT |

DRAFT · NOT AS-BUILT

| DRAFT — NOT AS-BUILT — LIVE CLOSEOUT GATES PENDING | | | | |
|---|---|---|---|---|
| CITY-002 | Future owner underground city | Build a future-city reservations/sales office. | IMPLEMENTATION_READY_COORDINATE_PLAN_NOT_GENERATED | IMPLEMENTATION_READY_COORDINA |
| CITY-003 | Future owner underground city | Plan the mini-city like a development with plots, utilities, phases and sales inventory. | CONCEPT_PROGRAM_AND_RESERVATION_DEFINED_FUTURE_MASTERPLAN_PENDING | CONCEPT_PROGRAM_AND_RESERVA |
| ADULT-001 | Program-wide adult spaces | Keep every adult-design component tasteful, private, age-controlled and non-graphic. | CONTROLLING_REQUIREMENT | CONTROLLING_REQUIREMENT |
| CONC-001 | Concord | Build a complete compact two-street service town along the data road; unlike the data-hall Phase 0 precincts, Concord is a full-build target. | RESEARCHED_AND_DESIGNED_COORDINATES_PENDING | RESEARCHED_AND_DESIGNED_COOI |
| CONC-002 | Concord ordinary frontage | Create an ordinary legible road face with Concord Fuel & General, Concord Community Post, The Last Relay bar, motel sign, planted edge and no blank backs. | RESEARCHED_AND_DESIGNED_COORDINATES_PENDING | RESEARCHED_AND_DESIGNED_COOI |
| CONC-003 | Concord nightlife economy | Make consensual adult nightlife the defining off-shift economy/hobby for neighboring data-center workers, expressed purposefully but non-graphically. | RESEARCHED_AND_DESIGNED_COORDINATES_PENDING | RESEARCHED_AND_DESIGNED_COOI |
| CONC-004 | Concord Night Court | Build the Concord Motor Lodge with exactly 25 rooms facing the shared court. | DESIGNED_COORDINATES_PENDING | DESIGNED_COORDINATES_PENDING |
| CONC-005 | Concord Night Court | Build the non-graphic Gilded Raven Annex opposite the motel with exactly 72 main-room seats, three five-seat salons and two single-guest salons. | DESIGNED_COORDINATES_PENDING | DESIGNED_COORDINATES_PENDING |
| CONC-006 | Concord Night Court | Build a separate non-graphic dance/strip-club venue. | DESIGNED_COORDINATES_PENDING | DESIGNED_COORDINATES_PENDING |
| CONC-007 | Concord worker services | Provide a marked shift-change shuttle stop, waiting lounge and late-night food/hospitality for data workers. | DESIGNED_COORDINATES_PENDING | DESIGNED_COORDINATES_PENDING |
| CONC-008 | Concord Night Court | Make the motel and theater face one real shared pedestrianized parking court with planted center walk and separate rear service lane. | DESIGNED_COORDINATES_PENDING | DESIGNED_COORDINATES_PENDING |

DRAFT · NOT AS-BUILT

| DRAFT — NOT AS-BUILT — LIVE CLOSEOUT GATES PENDING | | | | |
|---|---|---|---|---|
| CONC-009 | Concord future growth | Reserve two graded/landscaped future entertainment parcels with completed sidewalk and utility stubs and an extendable planted turning court. | DESIGNED_COORDINATES_PENDING | DESIGNED_COORDINATES_PENDING |
| CONC-010 | Concord terrain and network isolation | Fit Concord to terraced terrain, preserve useful drainage and green buffers, and keep theater/club routes isolated from owner corridor, Ravensgate and inactive portals. | DESIGNED_COORDINATES_PENDING | DESIGNED_COORDINATES_PENDING |

## Reading rule

Frozen requirement language is preserved. Effective state is advanced only by a named passing closeout gate; draft output is not as-built.

DRAFT · NOT AS-BUILT

# Town Expansion Redevelopment Artifact Register

Release: `REDEV-2026-07-28-TOWN-EXPANSION`
Mode: **DRAFT**
Status: **DRAFT_NOT_AS_BUILT_REGISTER**
Generated: 2026-08-25T17:08:03.957Z
Machine register: `data/world-review/town-expansion-artifact-manifest-2026-07-28.draft.json`

> **DRAFT / FINALITY RULE:** Draft mode is preparation evidence only and must not be described as final or as-built. Final mode refuses to write unless transaction, post snapshot, post QA, media QA, database import, read-only database report, and all byte hashes pass.

## Final documentation input gate

| Gate | Result |
|---|---|
| Canonical compiler report, ownership manifest and forward package exist and agree | PASS |
| One canonical transaction is committed with strict-noop success | FAIL / PENDING |
| Immutable post snapshot exists, differs from prerelease and matches post QA | FAIL / PENDING |
| Bound live entity/player clearance report passed without mutation | FAIL / PENDING |
| Independent post-release QA reports PASS and ACCEPTED | FAIL / PENDING |
| Paired post media passed, binds post/package/crosswalk, and supplies 13 maps | FAIL / PENDING |
| Atomic database closeout imported every verified registry object | FAIL / PENDING |
| Read-only database publication census passed against the accepted post state | FAIL / PENDING |

DRAFT · NOT AS-BUILT

## Purpose and reading rule

This is the human review index for the release evidence set. The adjacent JSON is authoritative for file-level SHA-256 values, byte sizes, image dimensions, JSON status fields, package IDs, operation hashes, and snapshot bindings. Generated dossier outputs are intentionally excluded to avoid a self-referential hash cycle.

## Inventory summary

| Evidence class | Files | Bytes | Images | JSON |
|---|---|---|---|---|

## Integrity procedure

1. Regenerate this register only after all release evidence is final.
2. Compare the JSON artifact path set to the distributed handoff.
3. Recompute SHA-256 over exact bytes and compare every record.
4. Verify every post-release JSON snapshot binding resolves to the accepted immutable post-release region directory.
5. Treat an absent file, hash mismatch, parse error, stale snapshot binding, or non-passing acceptance status as a documentation defect.

DRAFT · NOT AS-BUILT

DRAFT — NOT AS-BUILT — LIVE CLOSEOUT GATES PENDING

# Town Expansion PM Evidence Gate Matrix

Point-in-time audit: `2026-07-28T18:31:02Z`
Overall release state: **BLOCKED — NOT ACCEPTED, NOT PUBLISHED, NOT HANDED OFF**

This matrix is fail-closed. A component-level or offline `PASS` does not imply terminal acceptance. Current terminal artifacts take precedence over `SESSION_MEMORY.md` and generated knowledge-base outputs when those sources are older. The terminal snapshot currently under review is `71f52acf04f4974557fcc23e7cb02d81d76ed17cbab41bcc78ff9846cba1045d`; the citizen route path is `9fe7e7bae1c2fde2243ee42a7322d2a8ac763042a9bc8eef69f44adce71ca701`.

## Rollback and recovery control total

The exact historical recap is **6 incidents, 11 rollback/recovery invocations, 8 completed, and 3 failed**. An incident is an atomic transaction requiring compensation; an invocation is one rollback or bounded-recovery execution, so the counts are intentionally not one-to-one.

| Invocation | Outcome | Exact recap |
|---|---|---|
| `RED-20260727-01-R1` | Complete | MainStreet component rollback |
| `RED-20260727-01-R2` | Complete | Raven Rock component rollback |
| `RED-20260727-01-R3` | Complete | Westlight component rollback |
| `TOWN-20260728-01-R1` | **Failed** | Obsolete-hash generic rollback |
| `TOWN-20260728-01-R2` | Complete | Exact prefix-10 recovery |
| `TOWN-20260728-02-R1` | **Failed** | Frozen-rebase generic rollback |
| `TOWN-20260728-02-R2` | Complete | Exact prefix-13 recovery |
| `TOWN-20260728-03-R1` | **Failed** | Complete-state generic rollback |
| `TOWN-20260728-03-R2` | Complete | Exact prefix-123 recovery; later review found reactive short-grass drift outside the prefix proof |
| `TOWN-20260728-04-R1` | Complete | Full Paper-strict rollback, 484,635 groups and zero failures; followed by a fresh 483,016/483,016 source preflight |
| `TOWN-20260728-05-R1` | Complete | Accessibility-repair exact prefix-566 recovery, 566/566; followed by a fresh 1,530/1,530 source preflight |

The detailed generated incident ledger correctly retains those rollback totals, but it is not current for later QA counts. The canonical source `data/knowledge-base/redevelopment-release-incidents.json` was updated at `2026-07-28T18:11:00Z` and currently hashes to `38ef2faba51e16cebbadba74de09d8ff39a43891a7e7ce42760c7624175ba77d`; it has 6 incidents, 12 post-QA defects, 29 error occurrences, and 24 prevention rules.

## Current fail-closed gate matrix

| Gate | Current state | Evidence and decision | Required terminal condition |
|---|---|---|---|
| Base-to-supplement provenance | **BLOCKED** | Canonical `QA-20260728-12` is `OPEN_REMEDIATION_IN_PROGRESS`. Supplemental-aware QA/import logic correctly rejects treating the base transaction as the whole release. The ordered base → accessibility (`0a74e06a…` → `16bd79f5…`) → citizen (`16bd79f5…` → `71f52acf…`) chain must be bound without omission or reordering. | Independently hash and validate the base transaction and every supplement, prove byte-identical post-to-next-source continuity, and bind the final terminal snapshot. |
| Base rollback proof at the accessibility source | **FAIL** | The complete 483,016-group preflight against preserved accessibility source `0a74e06adf1b0520ad24433a459346f1d65105e40b0c92da222b94b356db3218` failed 65 groups. The policy audit accounts for 4,529 admissible copper-transition points and **49 unsupported red-carpet provenance points**. Carpet disappearance is physical drift, not a copper lifecycle transition. Evidence: `town-expansion-r1-base-rollback-preflight-accessibility-source-20260728.json` SHA-256 `806544a2e2af87e35180ef10d9cb35cce093e118f80b935ae5bc67df232efcf3`; policy audit SHA-256 `2accb75be1de5bf593dc052f0c916387b3d318c9f148544cec56750ee686f123`. | Recover the 49 cells physically under the approved live contract, take a new immutable snapshot, then pass the complete policy-aware base rollback preflight. The copper-only exception must remain fail-closed. |

DRAFT - NOT AS-BUILT

| DRAFT — NOT AS-BUILT — LIVE CLOSEOUT GATES PENDING | | | |
|---|---|---|---|
| 49-cell red-carpet recovery | **OFFLINE READY; NOT EXECUTED** | The recovery manifest is `OFFLINE_VALIDATED_NOT_EXECUTED`, with no live-world, service, or database mutation. It contains 49 one-cell `air → red_carpet` guards, forward SHA-256 `bbbc0e74ebaa857d5a235535d68d069df73bd1b81516aef4495352fa54be4b16`, and an exact inverse SHA-256 `e2f49273472cd0a16c34aba4407bde6ed0b2494eec38cd1c3b569cc260192a64`. Terminal-source preflight passed 49/49. | First pass the citizen bidirectional walk; then stop the service, freeze the world, obtain a fresh entity gate, execute with Paper-strict `--strict-noop`, capture an immutable post snapshot, prove exact rollback readiness, and rerun the complete base rollback preflight. |
| Representative offline accessibility routes | **PASS, LIMITED** | Accepted immutable-post geometry covers 22/22 routes, 44/44 directions, and four isolation contracts. This is offline geometry evidence only and does not satisfy the citizen activation walk. | Preserve the same-snapshot route identity and complete all distinct live-only powered-door, dynamic-clearance, and no-dig/no-tower checks required by the route contract. |
| Citizen live commute | **FAIL — REPEATED REVERSE CHECKPOINT 13** | Audits `20260728T165823Z`, `T180433Z`, and latest `T181928Z` each completed staging and 49/49 forward checkpoints, then failed reverse checkpoint index 13 at target `[-83,72,1]` after a retry. Latest status is `FAIL`; only 13 reverse checkpoints completed. It recorded zero digs and zero security incidents, but those clean observations do not override the route failure. The later two audits bind snapshot `71f52acf…` and exact path `9fe7e7ba…`. | One terminal `PASS_BIDIRECTIONAL` audit on the bound snapshot/path: 49/49 forward and 49/49 reverse, production movement policy matching the certified no-parkour/no-dig model, zero digs, and zero security incidents. Do not activate citizen schedules before this passes. |
| Gilded Raven camera family | **PASS, RESOLVED** | Root cause was the second-pass eye `[-8,78,-368]` occupying the solid L2 floor. Reviewed exterior, main-bowl, and grand-descent cameras now pass 3/3, bind six paired captures, preserve rejected raw evidence, and write no canonical capture paths. Family report SHA-256: `bff893371f2a4f561f8e6562693c14131295444d5f6be75b62a412bc5a91531d`. | Keep this family report and its snapshot/hash binding unchanged through manifest render and media QA. |
| Complete media static contract | **PASS, NON-RENDERING** | Static preflight SHA-256 `93018d5836a75a5df36901a30e0ef48e3bd31c33cb935511eb4bbd1b98b7b5b5` passes 1,178 cameras, 589 pairs, 340 exact objects, and all three render-backed family gates against snapshot `71f52acf…`. It explicitly invalidates all 1,178 outputs; 91 prior-snapshot files existed at audit time. | Render every declared output from the finally accepted immutable snapshot and preserve all rejects. Static validation cannot substitute for captures. |
| Complete media render and media-release QA | **PENDING** | At audit time neither `capture-report.json` nor `town-expansion-r1-post-release-media-2026-07-28.json` exists, and no renderer or media-QA process is running. | Capture report must cover all 1,178 expected outputs with exact package/image hashes and no missing or failed pair; media QA must `PASS` against the final accepted post snapshot. Any new world snapshot invalidates the existing static/media snapshot binding and requires regeneration or revalidation. |
| Final post-release acceptance | **BLOCKED** | No current supplemental-aware final report proves all world, rollback, route, media, and identity gates together. Older component passes cannot be composed by assertion. | Run the read-only final verifier with the complete ordered transaction chain, new immutable terminal snapshot, accepted representative-route artifact, successful rollback proof, and media report; require `PASS`, `ACCEPTED`, and zero failed gates. |
| Release database import | **BLOCKED; NOT EXECUTED** | Database closeout remains `OFFLINE_IMPORTER_PREPARED_NOT_EXECUTED`. No database mutation is authorized while final QA, supplement continuity, media identity, or complete capture pairs are missing. | First run a fail-closed dry run against the accepted chain and expected database SHA. Then use backup plus immediate transaction for the commit, followed by a post-import census and exact object/media crosswalk verification. |
| Knowledge-base database/report/ledger | **STALE; REBUILD REQUIRED** | The generated KB report was created at `17:38:04Z` from source SHA-256 `38a568f7…`; the canonical source is now SHA-256 `38ef2fab…`. Therefore its SQLite SHA-256 `9571245d…`, report, and Markdown ledger do not describe the latest 12-defect/29-occurrence/24-rule state, even though their 6/11 rollback totals remain correct. | Finalize canonical incident evidence, rerun the guarded KB builder, and require source/database/report/Markdown identities, semantic validation, zero missing artifacts, and stable-input checks to pass. |
| PM dossier and final PDF | **PENDING** | The dossier source is intentionally open. Point-in-time validation of older PDFs does not prove a final Town Expansion dossier; the final Town Expansion HTML/PDF and synchronized artifact-register hashes do not yet exist. | Freeze final evidence, compile HTML/PDF, verify the PDF opens, has nonzero pages, renders successfully, and matches the artifact register; record final SHA-256 identities. |
| Sites publication | **PENDING TOWN-EXPANSION UPDATE** | Owner-only Sites v4 is a healthy predecessor with root HTTP 200 after the v3 Worker 1101 repair. It is not the Town Expansion closeout. `/favicon.ico` remains a nonfatal HTTP 404. | After acceptance, DB/media/PDF closeout, push the exact source state, save and deploy that version, preserve owner-only access, verify root and key routes return 200 with no Worker errors, and fix or explicitly close the favicon defect. |
| Box handoff | **PENDING SYNC** | The Box connector is real and reachable, but automatic sync is off and the July 28 remote handoff has not been verified. Existing local/remote audit evidence is point-in-time only. | Sync only approved final roots after all accepted snapshot, transaction, QA, DB, media, PDF, and Sites identities are frozen. Require `failed: 0`, `skipped: 0`, complete remote paths, Box SHA-1 equality for every handoff file, and a hashed final sync report. |

DRAFT · NOT AS-BUILT

# Required closure order

1. Obtain the terminal 49+49 citizen route pass with zero dig/security events.
2. Execute the guarded 49-carpet physical recovery under its frozen-world contract; capture a new immutable snapshot and prove its exact inverse.
3. Reprove the complete base rollback and the ordered base → accessibility → citizen → carpet continuity chain.
4. Rerun representative-route and final post-release QA against the new terminal identity.

6. Dry-run and commit the release database; run the post-import census.
7. Rebuild the KB database/report/ledger from the finalized canonical source.
8. Freeze the artifact register; compile and validate the final PM PDF.
9. Publish and health-check the owner-only Sites version.
10. Sync Box and prove remote path/hash equality.

---

## Mandatory terminal follow-up

When the release reaches a genuinely terminal `ACCEPTED` or `BLOCKED` state, run the full fan-out postmortem across PM/release engineering, world/build, QA/routes, media, database/KB, citizen operations, Box, and Sites. Account for every rollback, bounded recovery, QA/rerender, route, database, publication, and handoff delay. Explicitly assess whether custom tooling should be retained or built for canonical block-state comparison, journal-prefix atomic recovery, resumable rendering, and a terminal release orchestrator that binds world, rollback, route, media, DB/KB, PDF, Sites, and Box identities.

DRAFT · NOT AS-BUILT

DRAFT — NOT AS-BUILT — LIVE CLOSEOUT GATES PENDING

# Full fan-out postmortem handoff

Status: **MANDATORY AFTER THE CURRENT RELEASE CLOSEOUT**

When the Town Expansion release reaches a terminal accepted or blocked state, remind the owner to launch a dedicated multi-team postmortem. Do not let this request disappear into the build documentation.

The postmortem must independently reconstruct and then debate:

1. Why the program and release took as long as it did.
2. Every rollback, bounded recovery, failed QA invocation, media rerender, route rework, database correction, Sites runtime error, and external publication delay.
3. Which failures were unavoidable world-state discoveries and which were planning, implementation, testing, evidence-retention, or coordination failures.
4. Where agents duplicated work, overwrote evidence, used stale inputs, or waited on avoidable sequential bottlenecks.
5. Which existing tools need repair and which purpose-built tools should be written for atomic release orchestration, snapshot diffs, route proving, camera preflight, resumable rendering, KB ingestion, PDF generation, Box synchronization, Sites packaging, and terminal acceptance.
6. Concrete code changes, ownership, priorities, effort estimates, acceptance tests, and a staged implementation roadmap.
7. A counterfactual release plan showing how the same scope should be executed next time, with measured time savings and fewer manual interventions.
8. Why the accessibility repair's offline preflight accepted a semantically identical stair source/target whose properties were merely reordered, why that defect reached live execution, and how the new canonical-state and journal-prefix tooling should become a reusable release primitive.

Specific in-house tooling candidates now supported by direct evidence:

- a canonical block-state parser shared by generators, preflight, rollback, and the live runner;
- an atomic single-package wrapper that automatically produces and validates a journal-proven successful-prefix recovery instead of attempting an unbounded generic rollback;
- a resumable renderer with per-camera immutable failure archives and manifest/snapshot invalidation;
- one terminal orchestrator that binds source snapshot, entity gate, exact preflight, live execution, post snapshot, rollback readiness, route QA, media QA, database import, PDF, Box, and Sites into a single state machine.

Suggested owner prompt:

> Fan out independent PM, release-engineering, world-build, QA, media, database/KB, citizen-runtime, Box, and Sites teams. Perform a complete evidence-based postmortem of the July 27–28 redevelopment and Town Expansion program. Debate root causes, distinguish discovery from preventable rework, identify why it took so long, audit our current tooling, and propose the purpose-built automation we should write. Deliver one reconciled report with chronology, metrics, five-whys, contributing factors, what went well, what failed, corrective actions, code-level recommendations, owners, priorities, tests, and a faster reference workflow. Cite the incident KB and immutable artifacts; do not rely on memory alone.

DRAFT — NOT AS-BUILT — LIVE CLOSEOUT GATES PENDING

# Town Expansion Redevelopment Artifact Register

Release: `REDEV-2026-07-28-TOWN-EXPANSION`
Mode: **FINAL**
Status: **FINAL_AS_BUILT_REGISTER**
Generated: 2026-07-28T21:26:53.709Z
Machine register: `data/world-review/town-expansion-artifact-manifest-2026-07-28.json`

> **DRAFT / FINALITY RULE:** Draft mode is preparation evidence only and must not be described as final or as-built. Final mode refuses to write unless transaction, post snapshot, post QA, media QA, database import, read-only database report, and all byte hashes pass.

## Final documentation input gate

| Gate | Result |
|---|---|
| Canonical compiler report, ownership manifest and forward package exist and agree | PASS |
| One canonical transaction is committed with strict-noop success | PASS |
| Immutable post snapshot exists, differs from prerelease and matches post QA | PASS |
| Bound live entity/player clearance report passed without mutation | PASS |
| Independent post-release QA reports PASS and ACCEPTED | PASS |
| Paired post media passed, binds post/package/crosswalk, and supplies 13 maps | PASS |
| Atomic database closeout imported every verified registry object | PASS |
| Read-only database publication census passed against the accepted post state | PASS |

## Purpose and reading rule

This is the human review index for the release evidence set. The adjacent JSON is authoritative for file-level SHA-256 values, byte sizes, image dimensions, JSON status fields, package IDs, operation hashes, and snapshot bindings. Generated dossier outputs are intentionally excluded to avoid a self-referential hash cycle.

## Integrity procedure

1. Regenerate this register only after all release evidence is final.
2. Compare the JSON artifact path set to the distributed handoff.
3. Recompute SHA-256 over exact bytes and compare every record.
4. Verify every post-release JSON snapshot binding resolves to the accepted immutable post-release region directory.
5. Treat an absent file, hash mismatch, parse error, stale snapshot binding, or non-passing acceptance status as a documentation defect.

DRAFT · NOT AS-BUILT

DRAFT — NOT AS-BUILT — LIVE CLOSEOUT GATES PENDING

# Attached-Garage Requirement Supersession

Change ID: `REDEV-2026-07-28-CR-ATTACHED-GARAGES-01`
Effective: 2026-07-28 UTC
Priority: **controlling owner requirement**

## Controlling requirement

1. Every residential garage must be physically attached to its parent house.
2. Detached residential garages are prohibited.
3. A large house must have either a four-car or six-car attached garage.
4. No one-, two-, or three-car source precedent overrides the owner's current in-world design requirement for a house classified as large.
5. Attachment must be functional and architectural: continuous enclosed building fabric plus an interior house-to-garage route. A freestanding garage connected only by paving, an open fence, a decorative wall, a canopy, or a bridge-like token block does not pass.

This directive supersedes all earlier prospective guidance permitting detached rear/side garage pavilions. Earlier transaction and QA records remain immutable historical evidence of what R1 built and accepted at that time. They are not current design authority and must not be replayed.

## Known affected as-built objects

The accepted R1 database/catalog contains eighteen detached residential garage objects that require a separately guarded attachment/capacity retrofit:

| Parent houses | Existing garage feature IDs |
|---|---|
| `H01` – `H12` | `R4-GAR-H01` through `R4-GAR-H12` |
| `C02` – `C07` | `R4-GAR-C02` through `R4-GAR-C07` |

The existing garage IDs should remain stable if the database importer supports an as-built update of the same real-world object. If a retrofit creates a materially new object identity, the database team must explicitly supersede the old ID and preserve the historical relation; it must not silently create two "current" garages for one physical volume.

All H-series houses are initial large-house review candidates. The engineering package must publish a measured house-size/capacity schedule and assign each large house either four or six attached bays. C-series residential villas must also be attached; their four-versus-six classification must follow the same measured schedule. Any exception requires an explicit owner decision.

The first measured redesign basis now exists at `mainstreet-attached-garage-coordinate-schedule.json`, SHA-256 `b03a999ff72f8060b6dc373be5b45bd14b970c83b3d92a65b14de28055d71ea1`. It is explicitly marked `SURVEY_REDESIGN_BASIS_NOT_A_RELEASE` and provides proposed attached envelopes for all 18 houses. Its current classification is:

- 2 six-car proposals: `H01`, `H07`;
- 4 four-car proposals: `H03`, `H08`, `H09`, `H10`; and
- 12 attached two-car proposals for smaller or unverified cottage-scale parents.

The four- and six-car assignments conform to the controlling large-house rule. The two-car assignments are acceptable only if the fresh survey substantiates that those parents are not large; the owner's requirement, not a stale model record, wins any conflict.

## Affected source and generated artifacts

### Direct design conflicts

| Path | SHA-256 at change review | Disposition |
|---|---|---|
| `mainstreet-america/planning/redevelopment-r4-r5.yaml` | `06154dbc1afcc43607c64a00ee66e07fd35cb9fced5dce76d32c81dc33d69025` | Superseded for garage typology; retain as R1 history |
| `scripts/generate_mainstreet_redevelopment_r4_r5.mjs` | `8c18fd13e4801b01f8af23b185cc60b32584d348321ecf74984a68fe455ae5e4` | Do not reuse for new garages without an attached-garage redesign |
| `docs/redevelopment/2026-07-27/infrastructure-standards.md` | `bd619c9939e1be2399cd4b9d6f4e4a8468bf5d3f3f27a9888a0ea40005c77e8a` | Detached-garage permission is superseded |

DRAFT — NOT AS-BUILT

| DRAFT — NOT AS-BUILT — LIVE CLOSEOUT GATES PENDING | | |
|---|---|---|
| `docs/redevelopment/2026-07-27/research-bibliography.md` | `82c775639c6bc37392d216166aeb5e120abf5beea0daf3797ffd5b3aeb96020b` | Detached precedent remains research history, not design authority |
| `docs/redevelopment/2026-07-27/mainstreet-runtime-safety-follow-up.md` | `04f0e73a7baadd1453b677505a282bef18919497b3bcb181b370c78fbc9dd78c` | Its factual description remains valid; its garage scheme is superseded |

`docs/redevelopment/2026-07-27/mainstreet-surface-release.md` describes an earlier garage-pavilion draft and its execution history. It is affected as a historical narrative, not as current authority.

### Generated R1 design/build records

| Path | SHA-256 at change review | Disposition |
|---|---|---|
| `data/buildops/mainstreet-redevelopment-r4-r5-2026-07-27.report.json` | `aff9a31233c94c301d54aa3519200860615005aa5dc720f67a57b4d20e25dbb6` | Historical built-design report; do not rewrite |
| `data/buildops/mainstreet-redevelopment-r4-r5-runtime-safe-2026-07-27.report.json` | `136912978b0f2b61554b8da4066e696175cdffe403ec81fffc76f2dcc56a4faa` | Accepted R1 as-built report; use as retrofit source census |
| `data/world-review/mainstreet-redevelopment-r4-r5-design-2026-07-27.json` | `eb5665f0961d7959c16fe769ba7226dda62ff0d74c9b71e56ad309cabc9aac63` | Historical design export |
| `data/world-review/mainstreet-redevelopment-r4-r5-runtime-safe-design-2026-07-27.json` | `ec01e52e08f9e9e0bb45bba6416b503774399c1e4f02fc627baf66cbaff42305` | Historical accepted design export |
| `data/world-review/redevelopment-attempt1-2026-07-27/mainstreet-redevelopment-r4-r5-2026-07-27.report.json` | `aff9a31233c94c301d54aa3519200860615005aa5dc720f67a57b4d20e25dbb6` | Rejected/earlier attempt; never current authority |

The corresponding forward/rollback operation files, transaction ledger, camera manifests, route records, and R1 post-QA are also affected as the physical provenance of the eighteen detached garages. They must remain immutable because later attachment work needs their exact history.

### Catalog, atlas, and Sites derivatives

The following current exports repeat the detached garage names/relations and must be regenerated after the attachment retrofit:

| Path | SHA-256 at change review | Required action |
|---|---|---|
| `data/exports/world-catalog-wave2-post-2026-07-28/features.json` | `99e650da6159783487ce3c1e21e02efc1d4baf536d120315e9a1aec5c941ee57` | Refresh from post-retrofit database |
| `data/exports/world-catalog-wave2-post-2026-07-28/object-media-index.json` | `28b27d975c6c8d6f8a066fa9106a114b4efe935bd40f6b8ccc180bb539507ef6` | Refresh exact relations |
| `world-showcase/public/reports/features.json` | `99e650da6159783487ce3c1e21e02efc1d4baf536d120315e9a1aec5c941ee57` | Replace in next Sites version |
| `world-showcase/public/reports/object-media-index.json` | `28b27d975c6c8d6f8a066fa9106a114b4efe935bd40f6b8ccc180bb539507ef6` | Replace in next Sites version |
| `world-showcase/public/data/buildings.json` | `230c82975ee1abbe25cebe44f31e18dfd6309f2ffa4a2c30e42d6ce810b3473d` | Refresh building/garage presentation |
| `data/exports/box/town-expansion-baseline-2026-07-28/team-a/area-inventory.json` | `29f35f8bf0f2b93bbcdb5ad991f4f4a15198822c53e5e46d6da5cd065949a698` | Retain as baseline; generate a new post atlas |

Earlier world catalogs, the baseline/post Wave 2 area inventories, compiled R1/Wave 2 PDFs, and Sites versions 1–4 also describe the historical detached state. They remain valid for their named snapshot boundaries, but a new current publication must visibly supersede them.

---

## Required retrofit work package

The town-expansion release must add an `ATTACHED-RESIDENTIAL-GARAGES` package or an explicitly equivalent package with:

1. a measured register of all residential houses and existing garage objects;
2. parent-house classification, including the large-house decision;
3. assigned four- or six-car capacity for every large house;
4. proposed attached geometry and interior connecting route;
5. driveway/alley/street access retained or intentionally redesigned;
6. no front-garden placement unless the owner explicitly approves it;
7. exact target cells and protected building/room intersections;
8. exact source/desired/rollback operations;
9. cross-package checks against town infill, roads, courtyards, utilities, and all accepted R1/Wave 2 targets;

DRAFT — NOT AS-BUILT

11. a normal walk from house interior into garage and from garage to the road in both directions;
12. post-state attachment proof using connected occupied building fabric, not naming alone;
13. capacity proof by clear bay count;
14. database feature/geometry/status updates;
15. refreshed catalog, atlas, dossier, and Sites source; and
16. Box sync/remote hash verification for the final artifacts.

---

# Acceptance rules

The package fails if any residential garage:

- is freestanding;
- lacks an interior connection to the parent house;
- uses only paving, landscaping, a fence, open canopy, or token bridge as the attachment;
- blocks normal house or street circulation;
- has fewer than four bays when the parent is classified as large;
- claims a capacity that is not visible in the clear internal bay geometry;
- leaves both old and new current database features active without a supersession relation; or
- appears in the final atlas/catalog/Sites release under the old detached description.

Final acceptance must report:

- residential houses checked;
- garages attached;
- large houses;
- four-car attached garages;
- six-car attached garages;
- exceptions (required: zero unless owner-approved);
- bidirectional routes passed;
- exact before/after cameras passed; and
- database/media relations refreshed.

---

# Change-control decision

State: **APPROVED REQUIREMENT / PHYSICAL REMEDIATION PENDING**

This change does not retroactively falsify the R1 transaction. It replaces its garage design rule for all future work and makes attachment/capacity remediation a mandatory gate of the current town-expansion closeout.

DRAFT · NOT AS-BUILT

DRAFT — NOT AS-BUILT — LIVE CLOSEOUT GATES PENDING

# Box Handoff Audit — July 28 Session

Audit ID: `REDEV-2026-07-28-SESSION-BOX-01`
Audit time: 2026-07-28T03:08:35Z
Mode: **read-only; no Box, Minecraft, database, or Sites mutation**

---

## Executive decision

**The Box destination is real and reachable, but today's handoff is not yet complete.**

The project does not use `data/exports/box` as a pretend cloud share. It has a production Box API integration in `src/integrations/BoxIntegration.ts`, backed by configured client credentials, a configured remote folder, API routes, a dashboard Settings panel, PDF-map generation, SHA-1 equality checks, and a durable sync report.

A credential-safe read-only connection test passed during this audit. The configured folder ID and name both matched the Box API response. No account identity or secret is retained here.

The durable sync ledger, however, ends at 2026-07-27T04:25:16.826Z. Automatic sync is disabled. At this audit boundary, 242 approved artifacts totaling 84,285,976 bytes had been created or modified after that ledger. A read-only remote directory/SHA-1 check found no remote directory for either Wave 2 atlas, the new town-expansion baseline atlas, or the Wave 2 dossier directory. Those artifacts are locally staged, not cloud-verified.

The machine result is `external-publication-audit.json`.

---

## Mechanism and safety boundary

| Item | Evidence | Result |
|---|---|---|
| Backend connector | `src/integrations/BoxIntegration.ts` | Present |
| API routes | `src/server/routes/boxIntegrationRoutes.ts` | Present |
| Settings UI | `web/src/app/settings/page.tsx` | Present |
| Configuration | `data/box-integration.json`, mode 0600 | Enabled; secret excluded |
| Authentication | Client credentials | Configured |
| Connection test | `/users/me` plus configured-folder lookup | PASS |
| Automatic sync | Connector setting | Off |
| Last durable ledger | `data/box-sync-state.json` | 2026-07-27 |
| Direct-upload ceiling | 50 MiB per file | No current post-ledger candidate exceeds it |

The approved local roots are deliberately narrow:

- `mainstreet-america/qa`;
- `mainstreet-america/visuals`;
- `mainstreet-america/planning`;
- `mainstreet-america/integration`;
- `docs`;
- `data/buildops`;
- `data/looks`; and
- `data/exports/box`.

Files outside those roots cannot be synchronized through the connector. Symlinks are rejected. Only the connector's allowlisted media/document extensions are eligible.

This has a direct consequence for the current program: screenshots or reports left only in `data/exports/redevelopment-*`, `data/world-review`, a snapshot directory, or the Sites repository are **not Box candidates** until an approved, intentional copy is placed under an approved root. World snapshots and live SQLite files should not be copied into the handoff merely to make the count larger.

DRAFT — NOT AS-BUILT

## Point-in-time local census

The connector discovered 701 approved artifacts totaling 175,826,622 bytes. Of these, 242 files / 84,285,976 bytes postdate the durable Box ledger.

| Post-ledger category | Files |
|---|---|
| Documents | 39 |
| Maps | 24 |
| Screenshots | 47 |
| Outputs | 132 |
| **Total** | **242** |

No post-ledger candidate exceeds the integration's 50 MiB direct-upload limit.

`data/exports/box` itself contained 317 files / 98,073,089 bytes at the census boundary:

| Extension | Files | Bytes |
|---|---|---|
| PNG | 163 | 33,394,163 |
| PDF | 77 | 51,792,207 |
| JSON | 46 | 12,632,060 |
| Markdown | 24 | 102,220 |
| MJS | 4 | 112,317 |
| GeoJSON | 1 | 36,862 |
| SHA-256 list | 1 | 2,274 |
| Text | 1 | 986 |

These are local filesystem facts. They are not evidence of remote transfer.

# Remote evidence

The following checks used the connector only to obtain a short-lived token and list remote folders/files. They did not create folders or upload file versions.

| Intended remote directory | Local files | Remote directory | SHA-1 matches |
|---|---|---|---|
| `exports/redevelopment-atlas-wave2-baseline-2026-07-28` | 10 | Absent | 0 |

Decision: **PENDING_SYNC**.

# Required final handoff

After the construction and QA teams finish, the release coordinator should perform one bounded sync of the final approved roots. Because that is a remote write, it belongs to the coordinating agent, not this read-only audit.

The handoff is complete only when all of these are true:

1. final screenshots, maps, plans, PDF, machine reports, and the PM dossier occupy approved roots;
2. no file exceeds 50 MiB and every expected extension is allowlisted;
3. the connector discovers the expected final file count;
4. the Box sync report has `failed: 0` and `skipped: 0`;
5. the report's `completedAt` is later than the newest final artifact;
6. every final remote path is listed read-only and its Box SHA-1 equals the corresponding local SHA-1;

DRAFT · NOT AS-BUILT

8. the PM dossier records uploaded, updated, unchanged, bytes, failures, and the exact sync report SHA-256; and
9. credentials, access tokens, account identities, and Sites bypass tokens are excluded from all artifacts.

---

# Inputs still required from the construction program

The Box closure step cannot be finalized until the program provides:

- accepted immutable post-construction snapshot path and aggregate SHA-256;
- exact forward/rollback operation files and their transaction ledger;
- independent installed-state and rollback QA;
- bidirectional route records for the pavilion/guild hall/library circulation, town blocks, stadium boulevard, oasis, and mini-bunker;
- final database import ledger and accepted database hash;
- exact-object before/after screenshot manifests and rendered images;
- final surface atlas and floor-plan package;
- final PM dossier PDF and its SHA-256;
- Russian civic-pavilion research/selection, plans/elevations, and library–civic-space–Guild Hall route/sightline evidence;
- Westlight island figure-ground, shoreline, water/grade, protected-object and aligned mall/street plans;
- intentional pier-building register, plans, sections and exact captures;
- amusement-pier research plus Ferris-wheel and roller-coaster plan/profile/clearance evidence;
- paired outer steak-house and shrimp-house programs/plans/captures;
- crater-lake containment/neighbor-fluid evidence and quay/green-loop QA;
- paired dry-park/water-park research, selected/rejected master plans, ride/attraction clearances, route QA, and water-containment proof;
- westward approach-road alignment, crossings, route reports, and crater-green-belt integration plan;
- Hampton-style lakeside design code, medium-density block/address plan, public-waterfront route, floor plans, and exact captures;
- both southwest-Ravensreach housing-project plans, central-space programs, connection/dignity QA, and exact captures;
- Ravensreach-to-rear-MainStreet staff-path survey/transaction/route evidence and employee-lounge plans/operations/captures;
- final Sites source commit, saved version, production health check, and access confirmation; and
- the post-sync Box report plus remote SHA-1 verification.

Until those exist, the correct statement is: **the Box connector is operational and the July 28 deliverables are locally staged, but the final cloud handoff is pending.**

The controlling Westlight/Russian-pavilion addition is `docs/redevelopment/2026-07-28-town-expansion/westlight-island-and-russian-pavilion-change-control.md`. None of its future deliverables is remotely verified at this audit boundary.

The controlling westward entertainment/housing/workforce addition is `docs/redevelopment/2026-07-28-town-expansion/westward-entertainment-housing-workforce-change-control.md`. None of its future deliverables is remotely verified at this audit boundary.

# C01 Five-Level Bunker — Frozen Machine-Schedule Handoff

**Planning status:** frozen and internally checked; not built.
**Live-world mutation:** none.
**Compiler status:** blocked until all nine new C01 scopes are emitted and the old C01 exact-object retirement ledger exists.

## Authoritative files

| Artifact | SHA-256 |
|---|---|
| `scripts/generate_c01_bunker_classification_manifest.mjs` | `e04e5c51c1bc145fec0d8f51ea1c67879c7b56a2b17da90768d25593cee7149e` |
| `c01-bunker-classification-manifest.json` | `26b811e96b86f2c3766e0f4f7b5e24604215b0520d43f57be1272bf217d4b1e5` |
| `evidence/c01-bunker-classification-qa.json` | `33f5e03f48a3e96276228293265568e490c7fff982edde7ec0b5508a5e61ec90` |

Regenerate the manifest with:

```
node scripts/generate_c01_bunker_classification_manifest.mjs
```

Run its read-only integration QA with:

```
node scripts/qa_c01_bunker_square.mjs \
  --ops data/buildops/town-expansion-r1-wip2.txt \
  --report data/buildops/town-expansion-r1-wip2.report.json \
  --manifest docs/redevelopment/2026-07-28-town-expansion/c01-bunker-classification-manifest.json \
  --out docs/redevelopment/2026-07-28-town-expansion/evidence/c01-bunker-classification-qa.json
```

The current QA result is intentionally `FAIL` only because the WIP2 compiler contains none of the nine frozen C01 scopes. All classification, program, terrain declaration, room-detail, camera, vertical-circulation, reachability, access-separation, egress, and exact-count gates pass.

## Exact capacity and utilization

| Level | Gross cells | Gross columns | Programmed | Circulation | Stair/lift | Service | Safety void |
|---|---|---|---|---|---|---|---|
| L1 security/garage | 187,254 | 20,806 | 50,103 | 118,854 | 4,707 | 11,700 | 1,890 |
| L2 living/amenity/adult | 166,448 | 20,806 | 97,608 | 64,544 | 2,616 | 0 | 1,680 |
| L3 agriculture/water | 166,448 | 20,806 | 87,776 | 62,432 | 4,000 | 10,560 | 1,680 |
| L4 command/medical | 59,192 | 7,399 | 42,232 | 15,168 | 1,792 | 0 | 0 |
| L5 power/escape | 59,192 | 7,399 | 42,136 | 15,152 | 1,904 | 0 | 0 |
| Owner club/arrival | 82,688 | 4,352 | 37,575 | 39,081 | 2,448 | 3,584 | 0 |
| Owner residence | 163,800 | 11,700 | 104,988 | 55,464 | 3,348 | 0 | 0 |
| **Total** | **885,022** | **93,268** | **462,418** | **370,695** | **20,815** | **25,844** | **5,250** |

The authoritative totals in the machine QA are:

- 885,022 gross classified cells;
- 879,772 net walkable/program/service cells;
- 462,418 programmed cells;
- 5,250 deliberately retained safety-earth cells;
- 0 unlabeled cells;
- 0 multiply classified cells; and
- 99.4068% net-to-gross within the audited interior-air envelopes.

The row-level circulation values sum to 370,695; that number, not a rounded visual estimate, controls downstream reporting.

DRAFT — NOT AS-BUILT — LIVE CLOSEOUT GATES PENDING

## Program locks

- The active hangar and arena programs are deleted. The clear-span room is a 2,950-column, 24-vehicle secure garage with cars, trucks, service bays, one large road-cut door, and five exact glazed support-gallery rooms.
- The public adult wing is 5,544 gross columns, above the 5,364 minimum. It has 24 distinct themed private rooms, five one-to-one rooms, one open exhibition salon, perimeter viewing, bar/lounge, dressing/wash/storage, performer corridor, and independent egress.
- The owner club has a real double-height theater, six meeting rooms, twelve private adult rooms, service/backrooms, and ceremonial arrival program.
- The residence contains exactly fifteen dual-entry poly suites, exactly three master bedrooms, and exactly two master kitchens.
- Every one of 165 occupied room/route objects has exact boxes, capacity or room-use metadata, furniture expectations, a route node, and a camera ID.
- All 165 nodes are reachable in the declared graph. Public 67/67, owner 88/88, service 8/8, and tunnel 2/2 access-class nodes are internally connected.

---

# Owner tunnel lock

Only this centerline is accepted at floor `y=-44`:

`(363,55) -> (540,-20) -> (620,-42) -> (718,-42)`.

It is a modern five-by-five clear branch in a seven-by-seven liner. The full eleven-by-eleven surveyed halo checks 54,956 unique snapshot cells and contains zero water, lava, bubble columns, or block entities. The terminal stair/lift prism `[718,-48,-50]..[734,-13,-34]` is also fluid- and block-entity-free. The straight candidate is rejected.

---

# Migration and concealment locks

The old C01 stays operational until the new complex passes commissioning. Its source census is 36 recursive database objects, 1,896 block entities, 1,622 inventories, 92 item stacks, and 5,132 items. Every moved NBT object needs exact source/destination coordinates, full NBT hashes, inventory slots, sequence, and rollback data. A live `data get block` hash check is mandatory before source retirement. Block-state guards alone are insufficient.

Retirement may target only exact C01-owned cells. Blanket clearing the old `[90..300]` area is prohibited. The observatory, penthouse/owner estate, private shelter route, and their inventories are protected siblings.

The rebuilt bunker must be terrain-sealed. Only the road-cut garage opening and the existing observatory/penthouse masks may be visible. Acceptance requires cellwise cover, full surface-to-structure ray tests, zero exposed C01 structural cells outside those masks, and matched 360-degree surface images.

Only after exact source retirement passes may P01 be restored as one uninterrupted 33,634-column parking object with complete aisles, stalls, crosswalks, lighting, drainage, and bidirectional vehicle circulation.

---

# Compiler acceptance

The implementation is not releasable until:

1. all nine `bunkerScopes` in the manifest appear in forward, rollback, and scope-summary reports;
2. the exact cell classifier reproduces the zero-unlabeled/zero-overlap totals;
3. a snapshot-derived NBT migration ledger reconciles all source totals;
4. the door-threshold graph and real voxel flood-fill reach every destination;
5. the normal-walk tests pass every stair, lift lobby, airlock, egress, and the owner tunnel in both directions;
6. post-state concealment and matched route/object cameras pass; and
7. database, maps, floor plans, screenshots, dossier, object-media arrays, and Sites payload are refreshed from the accepted immutable post snapshot.

DRAFT - NOT AS-BUILT

DRAFT — NOT AS-BUILT — LIVE CLOSEOUT GATES PENDING

# C01 East Relocation: Independent Opposing-Review Decision

**Decision:** rebuild and commission a new modular C01 in the east reservation before decommissioning the old complex. Do not translate the existing block volume.
**Selected planning vector:** `(+600 X, 0 Y, -230 Z)`
**Selected study envelope:** `x700..900, y20..60, z-160..5`
**Executable status: HOLD — planning decision only**
**Live-world effect:** none; the snapshot and database were read only.

---

## Executive finding

The user's outcome—move C01 far enough east to recover the entire `P01` lot, separate the entrance from the parking area, conceal every structural shell cell, and preserve the operating program—is sound. A literal move is not.

The first obvious translation, `(+400 X, 0 Z)`, lands at `x500..700, z70..235`. It contains 673 wet surface columns and 28,449 fluid cells in the `y20..60` study volume. The selected east/north reservation at `x700..900, z-160..5` has no wet surface columns and 1,137 fluid cells in the same-size volume. More importantly, a contiguous `x700..900, y20..60, z-83..-21` core contains 519,183 cells with **zero fluids and zero block entities**.

That evidence changes the answer from “move it 400 blocks east” to “functionally migrate it 600 blocks east and 230 blocks north, using stacked dry modules.” The selected site's raw north edge is only 19 clear columns from the nearest data-campus parcel. Therefore no C01 excavation may use `z=-160..-141`; that band is a permanent landscape, drainage, and utility-separation buffer. The normal occupied C01 modules start at `z=-140` or farther south.

---

## Debate record

### Position 1 — translate the existing object

The case for translation is continuity: the current program, adjacency logic, and visual identity already exist. A coordinate transform seems deterministic and may appear easier to roll back.

The evidence defeats that argument. The source and destination are not equivalent 3D states. The `+400 X` destination intersects thousands of fluid and gravity-sensitive cells. A command-level copy would overwrite unknown terrain, manufacture hidden water boundaries, and give a misleading impression that the original shell's cover and exits remain valid. Exact rollback would also be enormous and still would not prove the new road, drainage, egress, or concealment.

**Independent ruling:** reject literal translation.

### Position 2 — rebuild in the nearest east reservation

The nearest east option minimizes route length and leaves the original orientation intact. It also retains a simple narrative relationship to P01.

Its fluid census is poor: 28,449 fluid cells at `y20..60`, with a wetter southern half, plus 673 wet surface columns. A nine-wide zero-water raw-terrain road search from the P01 east edge also failed. The option would turn a relocation project into a dewatering and bridge project without a compelling benefit.

**Independent ruling:** reject `C01-EAST-A`.

### Position 3 — modular rebuild at the cleaner east/north site

The `(+600 X, -230 Z)` option is farther from P01 but has a zero-water surface and a large completely dry underground core. Stacking the preserved program across three levels replaces a sprawling shell with a smaller footprint while retaining usable floor area. North and south dry modules can be independently isolated with bulkheads.

The tradeoff is a longer access road and a mandatory separation negotiation with the new data-campus reservation. Those are visible design problems that can be solved and tested. They are preferable to excavating through known fluids.

**Independent ruling:** select for detailed design.

DRAFT · NOT AS-BUILT

DRAFT — NOT AS-BUILT — LIVE CLOSEOUT GATES PENDING

## Planning geometry

| Object | Inclusive bounds | Decision |
|---|---|---|
| Existing C01 | `x100..300, z70..235` | Remains in service until new C01 passes commissioning |
| Full east study | `x700..900, y20..60, z-160..5` | Survey reservation only |
| Permanent north buffer | `x700..900, z-160..-141` | No occupied module or excavation |
| Dry north module | `x797..888, y20..60, z-140..-85` | Optional isolated plant/service |
| Dry core | `x700..900, y20..60, z-83..-21` | Selected three-level main complex |
| Dry south module | `x701..900, y20..60, z-18..-5` | Optional isolated logistics/storage |
| Portal study | `x690..712, y48..74, z-70..-36` | Exact cover/fluid/grade survey still required |
| P01 recovery | `x-125..125, z172..305` | Must become uninterrupted parking |

The dry core is wide enough to preserve the C01 operating program by stacking it:

- `B3`, floor `y21`, clear `y22..31`: utilities, water management, maintenance, protected stores.
- `B2`, floor `y34`, clear `y35..44`: operations, communications, workshops, logistics.
- `B1`, floor `y47`, clear `y48..58`: arrival, support, briefing, internal loading/parking interface.

No concrete or liner may daylight. Every roof cell needs three solid terrain blocks after construction; edge cells that fail that test are backfilled or omitted, not cosmetically covered from one camera angle.

---

# Road and portal judgment

The parking lot and the new entrance must be distinct places. The road begins east of `x125`, outside P01, and reaches a recessed west-facing portal near the selected dry core. It should read as a landscaped mountain-side road: switchbacks, retained cuts, drainage channels, overlook lay-bys, and a small portal forecourt—not a driveway cut through parking stalls.

The survey did not find a continuous nine-wide, zero-surface-water raw-terrain path under the initial constraints. That is a useful negative result. The engineering team must deliberately design bridge/causeway and retained-cut segments and then prove:

- continuous finished grade and headroom;
- drainage that does not discharge into the portal;
- stable supported portal face;
- bidirectional vehicle and normal-walk movement;
- no occupation of P01;
- no collision with the original C01 while the old facility remains operational.

FHWA's geotechnical guidance says tunnel criteria must be project-specific and calls for evaluating surface and subsurface drainage, seepage locations, flow, and groundwater effects before selecting drainage measures. It also emphasizes intercepting water before it reaches sensitive areas. That directly supports the hold on an improvised road or portal. FHWA Geotechnical Technical Guidance Manual, §§4.8.5 and 4.9

---

# Underground construction and commissioning controls

OSHA's underground-construction standard is a real construction-safety reference, not a claim that Minecraft geometry is code-compliant. It nevertheless provides sound review categories: safe access and egress, control of unused openings, flood-control instruction, communications, ventilation, illumination, fire prevention, ground support at portals, and inspection of roofs/faces/walls. OSHA 29 CFR 1926.800

FHWA's road-tunnel guidance exists precisely because tunnel design cannot be reduced to a generic copy operation. FHWA Road Tunnel Design Guidelines FHWA pavement guidance likewise treats base, subbase, subgrade, unsuitable material, and drainage as a coordinated system; P01 reconstruction and the access road therefore need post-demolition subgrade and drainage evidence, not just a new surface palette. FHWA, Geotechnical Aspects of Pavements

These sources lead to four non-negotiable controls:

1. The new complex has at least two independent egress routes before migration.
2. Every module can be isolated from adjacent excavation and fluid boundaries.
3. Portal support, cover, drainage, ventilation, lighting, and communications are commissioned before occupancy.
4. The old complex is not removed until the new complex passes route, database, inventory, and matched-media acceptance.

DRAFT — NOT AS-BUILT — LIVE CLOSEOUT GATES PENDING

## Tunnel, database, and package conflicts

The read-only database query found no cataloged object intersecting `x700..900, z-160..5`. Cataloged Raven Rock routes end at or west of `x300`; none intersects the selected site. That is not permission to assume empty space. The executable release must repeat a 3D target intersection against:

- the newest database revision;
- every active forward and rollback operation file;
- the northeast data-campus coordinates;
- all known Raven Rock routes and their engineering halos;
- block entities, fluids, waterlogged states, gravity cells, entities, and player positions.

The nearest raw data-campus edge is `z=-180`, while the C01 study begins at `z=-160`. The 19-column raw gap is not enough for two major underground programs. Keeping C01 occupied modules at `z>=-140` creates 39 clear columns and makes the intervening band an explicit non-building buffer.

---

# P01 and warehouse recovery

Only after old C01 decommissioning may P01 be reconstructed as one continuous parking object at `x-125..125, z172..305`. Acceptance means uninterrupted aisles and stalls, complete surface support, drainage, and bidirectional vehicle circulation, with no portal or access-road cell left in the lot.

The underground warehouse can then extend east in two proven fluid-free wings:

- north: `x89..108, y40..60, z200..245`;
- south: `x89..125, y40..60, z246..296`.

Do not excavate the intervening east/north box blindly. Seven source-water cells occur at `x114..117, y48, z232..233`; three source-lava cells occur at `x125, y46, z232..234`. Keep a reviewed five-block halo, connect each wing to the original dry core through its own rated bulkhead vestibule, and test isolation before fitting out storage.

---

# Migration and rollback decision

The accepted sequence is:

1. Freeze the old C01 baseline and inventory.
2. Generate exact-state guarded excavation for one dry module at a time.
3. Build independent utilities, exits, road, portal, and concealment.
4. Commission routes, drainage, lighting, ventilation, database objects, and evidence.
5. Migrate program and inventory with a signed ledger.
6. Decommission the old C01.
7. Rebuild and commission all of P01.
8. Build the two recovered warehouse wings behind isolating bulkheads.

Every phase has an exact rollback paired to the same source snapshot. A no-op caused by source drift is a failure. An offline PASS is not permission for live execution.

---

# Final recommendation

Proceed to detailed design at the selected east/north reservation, using the proven dry core. Do not issue a construction package until the access road and portal have a defensible grade/hydrology solution, the campus separation buffer is frozen, and the same-moment transaction gates pass.

DRAFT — NOT AS-BUILT

DRAFT — NOT AS-BUILT — LIVE CLOSEOUT GATES PENDING

# C01 Five-Level Underground Bunker Compiler Handoff

**State:** `SOURCE_MODELED / OFFLINE AUDIT PASS / NOT LIVE`
**Live-world mutation:** none
**Database, Box, and Sites mutation:** none

## Supersession implemented

`modelC01FiveLevelBunker` is now the active C01 source used by the integrated town-expansion generator. The former compact arena/aircraft implementation is an unreachable fail-closed tombstone. Calling it throws the controlling `SUP-012/SUP-013/SUP-014` error.

The active design contains no aircraft, aircraft hangar, arena, stadium, or exposed bunker-box program. The bunker is modeled under the terrain. The only new surface exception is the short natural-covered garage road cut at `z=-140..-137`; the binding `z=-160..-141` campus-separation/drainage band is untouched. The existing observatory and owner penthouse/estate remain the only approved visible crown masks.

## Exact source-model result

The machine audit `evidence/c01-five-level-source-model-audit.json` reports `C01_MODEL_AUDIT_PASS`, 30/30 checks, and zero unreviewed C01 interfaces.

| Contract | Result |
|---|---|
| Classified cells | 885,022 |
| Modeled final-state cells in isolated C01 audit | 901,073 |
| Gross columns | 93,268 |
| Occupied room/route objects | 165 |
| Route nodes / edges | 165 / 181 |
| Camera candidates | 165 |
| Secure garage vehicles | 24 |
| Public adult private rooms | 24 |
| Public one-to-one rooms | 5 |
| Owner-club private rooms | 12 |
| Fully furnished non-graphic adult rooms including principal room | 42 |
| Poly-living suites | 15 |
| Owner master bedrooms | 3 |
| Owner master kitchens | 2 |
| Contained active Level-5 portal cells | 28 |
| Contained pool source-water cells | 117 |

All seven occupied strata have one declared broad stair and a paired two-car lift. The modern owner branch retains the frozen five-by-five clear route and the accepted detour through `(363,55) -> (540,-20) -> (620,-42) -> (718,-42)` at floor `y=-44`.

The rooms use complete non-graphic furniture groupings: privacy thresholds, beds/platforms, lounge seating and tables, dressing screens, wash/cleanup counters, storage, distinct materials, ambient/task light, and abstract specialty-furniture silhouettes. No people, anatomy, depicted acts, or explicit imagery are modeled.

## Exact NBT ledger

`generate_c01_source_nbt_migration_ledger.mjs` reads typed NBT from immutable snapshot `f8edf99494c023dd4b7e412d146a9018bb4ac29636f19c27431083e6b0f6ec10` and produces:

DRAFT · NOT AS-BUILT

- `data/buildops/c01-source-nbt-migration.commands.txt`, and
- `data/buildops/c01-source-nbt-migration.rollback.commands.txt`.

The ledger reconciles exactly:

- 1,896 block entities;
- 1,622 inventories;
- 92 item stacks;
- 5,132 total items;
- 1,619 move entries;
- 277 retained observatory/penthouse/shelter entries; and
- 25 bed-companion placements.

Every entry records the source block state, typed full NBT, SHA-256, inventory slots, item count, destination, expected destination NBT SHA-256, sequence, rollback point/NBT/hash, and guarded forward/rollback command. The commands copy and verify commissioned destination NBT; they do not retire the source.

# Binding release blocker and next transaction sequence

The ninth scope, `c01_source_exact_retirement`, is deliberately zero-target and deferred. This is required by commission-new-before-retire-old; it is not an omitted implementation.

A complete live release still requires:

1. one fresh same-moment immutable source snapshot;
2. exact REPL forward/rollback regeneration against that source;
3. live typed-NBT hash validation of all 1,896 source block entities;
4. entity/player clearance and strict-noop parser preflight;
5. commissioning of the complete new bunker;
6. normal walking, lift/stair, portal containment, 360-degree concealment, and matched visual acceptance;
7. execution and readback verification of the 1,619 destination NBT copies;
8. exact old-C01-owned retirement while retaining all 277 sibling entries and the observatory/estate geometry; and only then
9. full P01 parking recovery and its independent route/drainage acceptance.

The pinned ledger and source-model PASS do not authorize replay against a different live state and do not prove a live build.

DRAFT — NOT AS-BUILT — LIVE CLOSEOUT GATES PENDING

# C01 East Rebuild: Five-Level Bunker, Secure Garage, and Owner Stack Source of Truth

**Decision:** reject the compact twelve-room rebuild, aircraft hangar, and arena. Replace them with a larger, fully classified five-level bunker, secure vehicle garage, doubled controlled-hospitality wing, and deep owner stack.
**Status:** `HOLD_FOR_COMPILER_INTEGRATION_AND_INDEPENDENT_QA`
**Live-world effect:** none. This document is a read-only design and release contract. **Machine authority:** `c01-bunker-classification-manifest.json`. If this narrative and that frozen coordinate manifest differ, the manifest governs.

---

## Owner correction

The east rebuild is not a collection of colored rooms, an arena, or an aircraft hangar. A hangar has no operational logic without runway access. The former high-bay allocation is superseded by a secure underground vehicle garage and road-cut portal for cars and trucks. The first occupied level must read as one coherent operating complex:

- a true clear-span secure vehicle garage with no interior structural columns;
- one glazed support and administration gallery along the garage's east wall;
- a visible orientation concourse with an immediate view into the garage, the controlled hospitality wing, the operations room, and the broad stair/lift hall;
- a flexible emergency-operations and simulation room, with separate training, meeting, communications, storage, and support spaces;
- a controlled, non-graphic adults-only hospitality/performance wing in place of the former stadium/arena program;
- legible main and service circulation, actual backrooms, and two independent surface egress routes; and
- zero unlabeled interior cells, dead zones, sealed advertised rooms, or unreachable cavities.

The adults-only wing is represented only through architecture and neutral room labels. It contains no figures, acts, explicit signs, or explicit imagery.

---

## Existing and proposed capacity

The accepted database records the old C01 visible base at `x100..300, z70..235`, a 201 by 166 footprint, or 33,366 columns. Twenty-four published C01 room/circulation/utility bounds have a combined, non-deduplicated plate total of 14,920 blocks. The current east compiler proposes only `x797..888, z-140..-85`, or 5,152 columns:

| Measure | Value | Finding |
|---|---|---|
| Old visible square | 33,366 columns | Reference footprint |
| Current compact east module | 5,152 columns | 15.44% of old footprint |
| Two compact plates | 10,304 gross blocks | Only 69.06% of the published C01 plate total before walls, circulation, stairs, or services |
| Selected dry composite | 20,806 columns | 62.36% of old footprint |
| Two composite plates | 41,612 gross blocks | 278.90% of the published C01 plate total before classification deductions |

The compact rebuild therefore wrongfully shrinks C01. Its twelve nominal rooms cannot preserve the old program after structure, clear circulation, vertical access, garage height, support, and backrooms are deducted.

The replacement uses five connected, independently surveyed, fluid-free footprints:

1. north secure-garage module: `x797..888, z-140..-85`;
2. one-row dry bridge: `x801..888, z-84`;
3. central dry core: `x700..900, z-83..-21`;
4. south dry connector: `x800..900, z-20..-18`; and
5. south service module: `x701..900, z-17..-5`.

All five were scanned through `y20..60` in the immutable expanded town snapshot and contain zero fluid cells and zero block entities. The core has one low-cover natural chasm: 87 columns inside `x706..720, z-49..-36` have surface below the three-block-cover threshold for a `y44` roof. The design preserves a larger `x702..725, z-58..-23` earth/safety island around it. That island is a deliberate classified void, not forgotten space.

The full old-size east study square `x700..900, z-140..25` was also scanned. It contains 1,368,006 cells in `y20..60`, 442 fluid cells in 22 connected components, 18,454 gravity cells, 58,404 air/cave-air cells, and zero block entities. It is not an excavation envelope. The five dry footprints are the safe expansion selected from within it.

The high bay occupies the north module:

- clear-span vehicle floor `x800..858, y42..50, z-137..-88`, 2,950 gross columns;
- 24 modeled vehicle positions: twelve cars, eight trucks, and four secure service vehicles;
- no columns, enclosed rooms, fixed stadium seating, aircraft, or decorative mass may obstruct the vehicle aisles;
- a continuous four-block-minimum perimeter loop reaches every zone;
- the east support gallery occupies `x861..886, z-137..-88`;
- its west face is glazed and readable from the floor;
- it contains security dispatch, maintenance control, parts storage, motor-pool office, decontamination overlook, staff support, and a continuous observation route; and
- the remote stair/airlock is separated from, but connected to, the gallery.

Painted floor zones, removable equipment, service pits with guarded edges, and overhead lighting may articulate the hall. They may not become structural columns or room-sized solid props.

The only permitted garage exposure is the approved road-cut portal opening `x800..818, y43..49, z=-137`. No garage wall, garage roof, concrete box, utility stack, or lower-level mass may break the mountain surface or skyline.

---

## Exact five-level organization

The frozen machine schedule classifies:

| Level | Interior volume | Binding program |
|---|---|---|
| L1 Security/Garage | 187,254 cells | security entrance, directory, checkpoints, decon, secure garage, glazed support gallery, EOC/training/logistics, visible adult-wing vestibule |
| L2 Living/Amenity | 166,448 cells | protected staff quarters, kitchen/dining, 120-seat theater, pool, offices, library, gaming, golf simulator, music studio, guest suites, doubled public adult wing |
| L3 Agriculture/Water | 166,448 cells | farms, animal husbandry, food/cold storage, seed bank, processing kitchen, water treatment, cisterns, pumps, maintenance |
| L4 Command/Medical | 59,192 cells | command center, situation room, SOC/lockdown controls, armory, vault, 16-bed medical bay, brewing/potion stores, quarantine, server room, eight-position shooting range, holding cells |
| L5 Power/Escape | 59,192 cells | power plant, switchgear/fuel support, panic bunker, Nether portal, trophy gallery, escape controls, emergency stores, two independent egresses |

Every occupied level has a seven-block broad stair, full landings, and a paired lift group. The protected staff quarters use a villager-trading-hall visual rhythm but no captive entities.

---

## Arena replacement: emergency operations

FEMA's EOC guidance supports a flexible operations room reserved for activation, separate classroom/training space, nearby meeting rooms, storage, and support. It recommends adaptable floor plans, accessible circulation, labeled communications, and movable layouts. C01 applies those public planning principles in fictional form:

- flexible operations/simulation room;
- separate training/classroom;
- communications and dispatch;
- nearby conference/briefing;
- storage for reconfiguration;
- medical/decon and staff support; and
- no bleachers, sports court, arena bowl, scoreboard, or stadium seating.

Source: FEMA NIMS Emergency Operations Center How-to Quick Reference Guide

---

## Controlled hospitality/performance wing

The former arena promise is replaced by a visible but controlled, non-graphic adults-only hospitality wing. Its public threshold is visible from the orientation concourse through an age-control/acoustic vestibule. The wing contains:

- one large open exhibition salon;
- a continuous open perimeter viewing gallery, with no fixed stadium seating;
- five small one-to-one hospitality rooms;
- twenty-four additional themed private rooms;

DRAFT — NOT AS-BUILT — LIVE CLOSEOUT GATES PENDING

- four performer dressing rooms;
- hair/makeup and wardrobe rooms;
- wash/cleanup and prop/storage backrooms;
- a performer-only service corridor; and
- an independent route to the remote surface egress.

The public and performer paths may meet only at controlled thresholds. The performer corridor may not dead-end behind a locked decorative wall.

The public wing occupies two full program plates, not one decorated room. Its classified adult-program footprint must be at least 5,364 blocks, exactly twice the first-pass 2,682-block allocation. It also requires substantially more private rooms than the first pass: four one-to-one rooms plus at least twelve other individually identified private/themed rooms across the two public levels.

Every adult room must be completely planned and furnished. “Non-graphic” does not mean blank or censored. Each room needs a distinct identity, bed or lounge zone where applicable, dressing, wash, storage, bar/refreshment function where applicable, layered materials, layered lighting, acoustic/privacy thresholds, furniture silhouettes, and non-graphic themed fixtures. The furnishing census and matched camera must be room-specific.

The official Moulin Rouge venue page describes a 1,000-square-metre, 850-person dinner-show room with a strong theatrical identity, small red table lamps, sound/light control, staff, and décor. C01 does not copy that venue or its show; it uses the public evidence to support a richly layered salon, perimeter hospitality, lighting, staff/service, and control program rather than fixed bleachers.
Source: Moulin Rouge venue

The Champagne Lodge publicly emphasizes seclusion and privacy and describes suite zoning with a bed, fireplace, whirlpool or pool, walk-in shower, steam room, desk, and private entrance. C01 does not copy its rooms; it uses those public adjacency ideas to require real sleeping/lounge, bathing, work, and privacy zones in the fictional suites.
Source: The Champagne Lodge

---

# Separate owner-only deep stack

The owner stack is physically and operationally separate from the public adult wing. It has its own access-control vestibule, broad stair, paired lifts, service path, smoke/air separation, and protected egress. Public, performer, owner-club, residential-service, and prior-owner-tunnel routes are separate graphs with only declared controlled thresholds.

A read-only deep survey of the expanded snapshot found:

| Stratum | Broad survey result | Selected buffered dry envelope |
|---|---|---|
| `y9..19` | 192 water, 0 lava; largest dry rectangle `x700..880,z-68..-20` | owner club `x705..875,z-64..-24` |
| `y-3..8` | 1 water, 53 lava; largest dry rectangle `x704..854,z-83..-5` | owner arrival/residence `x709..849,z-78..-10` |
| `y-15..-4` | 43 water, 0 lava; largest dry rectangle `x718..900,z-64..-27` | 15-suite wing `x723..895,z-60..-31` |
| `y-32..-16` | 7 water, 0 lava; largest dry rectangle `x711..898,z-79..-5` | master compound `x716..893,z-74..-10` |

No block entities occur in the broad deep core. The full `x700..900,z-83..-5,y-48..19` volume is not dry: it contains 338 water and 53 lava cells. No blanket excavation is permitted. Only the buffered dry rectangles above may advance, with repeated one- and five-cell neighbor-fluid checks.

## Owner club level

The frozen combined club/arrival envelope is `x723..850, y-14..4, z-62..-29` and contains:

- one large clear-span club theater with stage, open salon floor, perimeter hospitality, control, dressing, wash, storage, and service spaces;
- no stadium bowl and no fixed arena seating;
- at least six meeting rooms;
- at least twelve distinct furnished, non-graphic private adult rooms;
- lounges, bar/service, coat/storage, dressing, wash/cleanup, and staff backrooms;
- a separate service corridor and remote egress; and
- a short ceremonial hall to the controlled owner arrival level.

## Owner arrival program

The combined club/arrival level contains a lavish arrival suite with:

- ceremonial hall and grand reception;
- living room;
- formal dining;

- private adults-only dining;
- service kitchen;
- small cinema;
- ordinary office;
- separate twelve-monitor battle-station office;
- adjacent two-rack micro-datacenter with its own cooling/service vestibule;
- guest washrooms, coat storage, pantry, and backrooms; and
- controlled transitions to the club above and residential stack below.

### Fifteen-suite poly-living wing

The owner-residence envelope `x716..895, y-31..-18, z-74..-10` contains exactly fifteen large suites. Each suite has:

- one bedroom;
- ensuite bathroom;
- oversized rain-shower analogue;
- walk-in closet;
- sitting area;
- mini office;
- a normal front door from the residence gallery; and
- a second controlled back door to the owner-only rear corridor.

The rear corridor links all fifteen suites to the master compound. It has no public or performer connection.

### Owner master compound

The same owner-residence envelope contains exactly three large bedrooms, including one principal suite; a central grand bedroom with consent-oriented, non-graphic restraint/furniture silhouettes only; two kitchens; living; formal and casual dining; safe room; bathroom/spa; small cinema; indoor pool; hot tub; sauna; gym; computer office; library; ventilated cigar/smoke-lounge analogue without particles or consumption instructions; and a premium coffee bar.

The compound's grand door opens only from the owner residence stack. Its rear door connects through two controlled airlocks to the previously planned owner private tunnel using the frozen modern branch:

`(363,-44,55) -> (540,-44,-20) -> (620,-44,-42) -> (718,-44,-42)`.

The branch has a five-by-five clear route inside a seven-by-seven liner. Its full eleven-by-eleven neighbor halo contains 54,956 unique surveyed cells with zero water, lava, bubble columns, or block entities. The terminal stair/lift prism is `x718..734, y-48..-13, z-50..-34`; it is also fluid- and block-entity-free. The rejected straight route is prohibited because its expanded halo approaches lava and a retained chest at `630,-40,-14`.

---

## Arrival, visibility, and wayfinding

The inner airlock enters the main orientation concourse at the south edge of the north/garage approach. From the first directory point, the design must provide:

- a direct glazed sightline north into the secure vehicle garage;
- a visible and signed west opening to the controlled hospitality vestibule;
- a visible east opening to the flexible operations room;
- a visible broad stair and paired-lift hall;
- a central directory with a level diagram; and
- continuous color bands: blue garage, amber hospitality, green operations, white main loop, red service/egress, and cyan utilities.

Visibility is a graph gate, not a sign-count claim. The schedule identifies mandatory sightline origin/target pairs. A rendered ray or cell test must show no opaque obstruction at eye height.

---

## Stair, lift, and corridor standard

The existing compact switchback is rejected.

- Primary stair clear width: seven blocks.
- Maximum stair slope: one block rise per two blocks run.
- Clear headroom: six blocks.
- Full landing: at least twelve by eight blocks.
- Paired lifts: two distinct three-by-three clear shafts beside the stair.
- Every lower, main, and mezzanine landing opens to a directory and continuous circulation, not a sealed room.
- Main corridors: minimum five blocks clear width and five blocks clear height.

- No one-block pinch, forced jump, ladder, scaffold-only access, or head obstruction is accepted.

---

# Full-envelope classification

Every buildable interior cell must receive exactly one of six categories:

1. `programmed_room`;
2. `circulation`;
3. `stair_lift`;
4. `service_backroom`;
5. `structure`; or
6. `deliberate_safety_void`.

The schedule partitions both occupied plates and the double-height high bay. The only deliberate natural void is the surveyed chasm/earth island and its engineering collar. Shell, floor, roof, bulkhead, and gallery-support cells are structure. Empty but walkable room air is part of the room or circulation category, not an unclassified void.

The compiler must emit a machine-readable cell classifier and these metrics for every level:

- gross classified cells and columns;
- programmed, circulation, stair/lift, service, structure, and safety-void counts and percentages;
- unlabeled cells;
- multi-labeled cells;
- unreachable walkable cells;
- unreachable declared destinations; and
- a plan heatmap keyed to the six categories.

Acceptance requires zero unlabeled cells, zero multi-labeled cells, zero unreachable declared destinations, and zero unexplained enclosed cavities.

---

# Reachability and door-threshold gate

The inner main entrance is the route-graph origin. Every declared main-level room, each garage zone, the glazed overlook, the operations room, the controlled hospitality wing, all backrooms, the stair, both lifts, and both surface egresses require:

- a modeled door threshold or open threshold;
- a bidirectional graph edge;
- minimum width and headroom metadata;
- a voxel flood-fill from the origin after doors are treated as passable;
- a normal-walk route with no dig, tower, flight, jump, or teleport; and
- a matched route camera.

Secure rooms may have two-door airlocks. An airlock is not permission to seal the destination.

---

# Collision and concealment controls

The redesign stays within the prior east study reservation and leaves `z=-160..-141` untouched as the data-campus separation band. It does not expand the exterior road or portal target set. That avoids inventing a new surface collision while the shared compiler is under edit.

Before release:

- intersect every proposed cell with all active and rollback packages;
- repeat fluid, gravity, block-entity, entity, and player clearance;
- preserve the earth-island exclusion;
- prove at least three natural solid cover blocks above every liner/roof cell;
- prove no liner or concrete daylights in any surface camera or full surface census;
- prove zero exposed C01 structural cells outside the approved garage portal, observatory, and penthouse masks with cellwise cover and 360-degree surface-to-structure visibility rays;
- prove the portal drains away from the airlocks; and
- require a same-moment immutable snapshot and exact rollback.

DRAFT - NOT AS-BUILT

## Evidence and publication

The release is not complete until it produces:

- lower, main, mezzanine, and longitudinal/cross-section plans;
- six-category utilization heatmaps for every level;
- route and visibility graphs;
- full destination/reachability matrix;
- matched before/after exterior, entrance, garage, operations, hospitality, backroom, stair/lift, lower-loop, concealment, and egress captures;
- one database object per declared room/zone/route, with exact bounds;
- object-to-media crosswalks;
- updated surface and underground maps;
- updated master-plan dossier and Sites catalog; and
- a post-state verifier report.

No database import, screenshot, map, Box handoff, or Sites publication may call this design built before an accepted post snapshot exists.

---

# Separate PM dependency: Concord Broadcast Exchange add-on

The Concord Broadcast Exchange has a separate static design dependency: a visibly newer studio wing with two genuine clear-span sound stages, one for late-night/variety and one for sitcom production. Each stage needs a real filming volume, audience/lobby route, production/control/audio rooms, offices, talent dressing, greenroom, hair/makeup, wardrobe, scenery/prop storage, set construction, loading, acoustic vestibules, remote egress, and a partial two-story support/observation block. The remainder of each stage must stay open. Its exterior must read as a movie/television studio complex.

That dependency is not part of C01 geometry and must not be silently modeled as small colored rooms or a decorative shell.

DRAFT · NOT AS-BUILT

DRAFT — NOT AS-BUILT — LIVE CLOSEOUT GATES PENDING

# Citizen route ridge stair repair

Status: **PASS — offline proposal only; not executed**

## Finding

The production A* planner accepts the reverse edge `[-83,71,2] -> [-83,72,1]` with parkour, digging, and placement disabled. The live movement executor is the failing layer: repeated attempts log `path_reset: stuck` and time out on the two consecutive full-block rises. Even the sole historical pass took about 21 seconds and three stuck resets.

## Exact repair

Replace eight polished-andesite surface cells with north-facing bottom polished-andesite stairs: x=-84,-83,-81,-80 at y71/z1 and y72/z0. This makes two two-wide half-step walking lanes and preserves the yellow center stripe at x=-82. No route waypoint or arrival tolerance changes.

Forward: `data/buildops/citizen-route-ridge-stair-repair-2026-07-28.txt`

Rollback: `data/buildops/citizen-route-ridge-stair-repair-2026-07-28.rollback.txt`

Projected route QA: 22/22 routes and 44/44 directions PASS. This is projection evidence only.

## Controlled verification

1. Freeze and snapshot; require SHA-256 `71f52acf04f4974557fcc23e7cb02d81d76ed17cbab41bcc78ff9846cba1045d`.
2. Run an entity-clearance gate over the exact eight-cell scope.
3. Run exact source preflight and strict-noop parser dry-run.
4. Execute all 8 guarded operations atomically with zero failures/no-ops.
5. Snapshot post-state and preflight the exact rollback.
6. Run `node scripts/run_citizen_route_live_walk.mjs --segment reverse:13 --bot Surveyor` three times. It stages at reverse index 11 and exercises checkpoints 12-14.
7. Final acceptance still requires `node scripts/run_citizen_route_live_walk.mjs --execute --bot Surveyor`; cached segment passes are never an end-to-end acceptance substitute.

DRAFT — NOT AS-BUILT

DRAFT — NOT AS-BUILT — LIVE CLOSEOUT GATES PENDING

# Concord Broadcast Exchange — Soundstage Annex

**Project ID:** `CBE-STAGE-ANNEX-001`
**State:** researched design source of truth; exact compiler binding and live deployment remain pending
**Content boundary:** ordinary late-night and sitcom production spaces; no explicit imagery or depicted acts

---

## Executive decision

The Concord Broadcast Exchange receives a visibly newer studio-lot annex north of the original broadcast building. The addition is not two decorated sheds. It is a two-stage production complex with distinct public, talent, production, and service routes:

1. `CBE-STAGE-LN-001` — a late-night talk/variety soundstage;
2. `CBE-STAGE-SC-001` — a multi-camera sitcom soundstage;
3. a shared studio street, audience arrival court, scenery/loading yard, central plant screen, and enclosed link back to the Broadcast Exchange.

The outside must read as a movie and television studio complex: tall, mostly-windowless acoustic stage volumes; overscale numbered stage doors; lower two-story office and dressing-room bars; separate audience marquees; loading aprons; scenery carts; service markings; roof plant screens; and a landscaped staff edge. The newer annex may use cleaner concrete, dark metal, blue-gray terracotta, copper accents, and larger glazed office bays than the older brick Exchange so the upgrade is legible without becoming a different campus.

---

## Research translated into binding rules

Universal describes real sound stages as clear production volumes supported by hair and makeup, green rooms, staging, audience entrance/lobby, wardrobe, and broadcast control. Its public Stage 1 listing also separates these support functions from the stage itself. That becomes a hard room-list requirement, not decorative signage. Universal Studios Lot — Stages

Universal's public support-space program adds production offices, rehearsal and table-read rooms, talent holding, private dressing rooms, makeup, wardrobe, crew-feed support, and direct adjacency to sound stages. Each Concord stage therefore gets a real support bar rather than scattering these rooms through the open filming floor. Universal Studios Lot — Support Space

NBCUniversal's Stamford facility publicly describes two stages with HD control rooms, a large production office, ten greenrooms, star dressing rooms, hair/makeup, audience holding, wardrobe, security, and production-truck access. The Concord annex uses that relationship as its planning precedent while remaining a fictional Minecraft facility. NBCUniversal — Stamford Studios

Warner Bros. describes a studio lot as a combination of stages, production offices, mill space, flexible creative space, grip, lighting, property, costume, and post-production support. The annex therefore includes a shared scene shop/prop dock and a recognizable studio street rather than isolated buildings in grass. Warner Bros. Studio Operations Warner Bros. — The Ranch

The WBDG television-production facility criterion calls for a large soundproofed studio, set construction and scenery storage, video/audio control, technical support, and offices for writers, directors, producers, graphics, maintenance, and supply. It also notes the greater clear height and electrical, cooling, ventilation, fire-detection, and suppression needs of a studio. Those are represented architecturally and are not claimed as a real-world engineered system. WBDG — Television Production Facility

The late-night floor gets four visually distinct production zones—monologue, host desk/interview, house band, and musical/performance area—based on the Television Academy's public description of the traditional late-night format. Television Academy — The Arsenio Hall Show

---

## Surveyed reservation

The immutable design snapshot is:

`data/worldsnap-town-expansion-expanded-baseline-20260728T0405Z/region`

Snapshot SHA-256:

`e612b1feabcf8bd81e427804e0c5cdccea5aac79ef543cadbf2b05d360de7a5a`

The preferred north-annex reservations are:

| DRAFT — NOT AS-BUILT — LIVE CLOSEOUT GATES PENDING | | | |
|---|---|---|---|
| Late-night stage | `[680,45,-508]..[731,110,-432]` | min 47, p10 63, median 69, p90 74, max 81 | 70 buried water cells, zero lava, zero block entities, zero top-water columns |
| Sitcom stage | `[736,45,-508]..[787,110,-432]` | min 57, p10 63, median 68, p90 73, max 79 | zero water, zero lava, zero block entities, zero top-water columns |
| Enclosed/link interface | north of the existing `z=-425` shell wall, avoiding the tower and satellite field | top surface 63..72 in the surveyed east-link strip | zero fluid and block entities in the checked strip |

These are reservations, not demolition prisms. The compiler must establish an exact footprint within them, retain the natural wooded edges, and use stepped retaining courts, lower service terraces, and planted slopes. It must not replace the whole reservation with one flat platform. The 70 buried water cells in the late-night reservation remain protected unless a fresh exact foundation census proves the final structural cells do not touch them.

### Exact compiler reconciliation

The preferred prisms above were planning reservations. The separate cross-scope audit found that a first north-south layout entered DM12, DM10, the fictional Info annex, the 200-seat campus venue, and its back-of-house. Those conflicts were reported before correction and were not allowlisted. The exact compiler rotates both stages into the dry east-west band:

| Object | Exact inclusive bounds | Immutable-snapshot surface census |
|---|---|---|
| Stage 21 shell | `[674,72,-490]..[733,96,-431]` | min 47, p10 63, median 65, p90 68, max 70 |
| Stage 21 clear volume | `[680,73,-470]..[731,90,-437]` | `52 × 18 × 34`; zero scheduled or structural intrusions |
| Stage 22 shell | `[738,70,-490]..[797,94,-431]` | min 57, p10 63, median 64, p90 67, max 69 |
| Stage 22 clear volume | `[740,71,-470]..[791,88,-437]` | `52 × 18 × 34`; zero scheduled or structural intrusions |
| Studio street | x `674..797`, z `-430..-426` | min 63, p10 64, median 64, p90 65, max 66 |
| Enclosed Exchange link | `[710,66,-430]..[757,80,-426]` | one reviewed interface only: exactly 30 cells at x `710..715`, y `67..71`, z `-425` |

The east loading apron ends at x `804`, the west apron begins at x `668`, and neither stage, apron, support bar, tree canopy, nor connector enters another building scope. The known water point at `(693,66,-490)` and the three deep block entities below Stage 22 remain untargeted. Any future coordinate change invalidates this reconciliation and must rerun the exact interface audit.

DRAFT — NOT AS-BUILT

---

# Shared site program

- A numbered studio street links the Exchange to both stages.
- Public audience arrival is physically separated from trucks, scenery carts, and talent/service access.
- Each stage has two remote exits plus an independent service exit.
- The annex has an enclosed accessible link to the original Exchange and a separate exterior staff walk.
- A scenery/loading yard includes two truck-height stage doors per building, a shared scene shop, prop cage, refuse/recycling screen, and production-truck connection points.
- A two-story connector block contains security/reception, a shared commissary/crew-feed room, first aid, rehearsal/table-read room, production meeting room, restrooms, and central technical support.
- Exterior cameras must prove the annex reads as an intentional later upgrade and not a pair of warehouses.

---

# Stage 21 — late-night talk and variety

**Required clear stage:** at least `34 × 52` unobstructed blocks with a minimum 18-block clear height. Columns, stairs, offices, dressing rooms, and plant may not intrude into that volume.

Required production zones:

- monologue mark and host entrance;
- host desk and interview seating;
- house-band platform;
- separate musical/performance bay;
- audience floor with at least 96 believable seats, center and side aisles, accessible positions, and unobstructed views of the actual set;
- camera lanes between audience and set;
- overhead lighting/catwalk analogue with two protected access points;
- scenery crossover behind the set;
- direct scenery-door route that never crosses the audience lobby.

- public lobby, ticket/check-in, security, audience holding, concessions, coat storage, and restrooms;
- host dressing suite, two guest dressing rooms, green room, hair/makeup, wardrobe, and talent lounge;
- showrunner and producer offices, writers' room, production office, stage-manager station, conference/table-read room, and staff workroom;
- production-control, audio-control, lighting-control, edit/graphics, machine room, equipment cage, microphone/storage room, and technical repair bench;
- prop storage, scenery dock, janitor, electrical/plant representation, and independent back-of-house egress.

The support block is two stories along one long stage wall. Both levels receive glazed observation/control bays over the soundstage. Stairs and lift stay inside the support block; they do not consume stage floor.

---

# Stage 22 — multi-camera sitcom

**Required clear stage:** at least `34 × 52` unobstructed blocks with a minimum 18-block clear height. The permanent support block may occupy one long edge only.

Required production zones:

- three connected standing sets: primary apartment living/kitchen, secondary bedroom/hall, and café/workplace;
- a fourth swing-set/rehearsal bay;
- wide camera cross-aisle and scenery crossover;
- audience floor with at least 84 believable seats, accessible positions, and clear sightlines into the three principal sets;
- prop walls and removable set returns that visibly read as filming scenery, not finished occupied rooms;
- overhead lighting/catwalk analogue with two protected access points;
- direct set-construction and scenery-door route.

Required support:

- audience lobby, check-in, holding, concessions, restrooms, and remote public exit;
- six cast dressing rooms, two guest rooms, green room, hair/makeup, wardrobe, cast lounge, and rehearsal/table-read room;
- showrunner office, writers' room, production office, director and assistant director offices, meeting room, script/copy room, and staff workroom;
- production-control, audio-control, lighting-control, edit bay, machine room, equipment cage, and technical repair bench;
- prop cage, wardrobe workroom, set-dressing store, scene dock, janitor, and independent service egress.

The partial second floor contains writers, production, control, and observation rooms behind glass. The rest of the volume remains open to the stage roof.

---

# Circulation and visual acceptance

The annex fails acceptance if any of the following is true:

- a support room is represented only by a sign or an undivided empty box;
- the two soundstages are visually or operationally indistinguishable;
- audience seating faces an entrance, blank wall, or absent set;
- a public route crosses the scenery/truck route;
- the stage clear volume contains an office/stair/core column;
- the second floor spans across the whole stage instead of remaining a partial support/observation bar;
- scenery cannot travel from loading door to stage at grade;
- a dressing, greenroom, control, production, wardrobe, hair/makeup, scenery, prop, audience-holding, restroom, or remote-egress requirement is missing;
- terrain is replaced by a single unsupported or visibly artificial flat slab;
- a camera cannot prove each stage's set, audience sightline, partial second floor, production control, dressing/support route, loading route, and exterior studio-lot identity.

---

# Evidence package

Minimum matched evidence:

- one pre-build site overview;
- one exterior/studio-street view per stage;
- one loading/scenery view per stage;
- one audience-to-set sightline per stage;
- one stage-to-audience reverse view per stage;

- one dressing/greenroom/support corridor view per stage;
- one connector/shared-support view;
- one terrain/retaining/landscape view;
- one nighttime marquee and service-lighting view;
- a second-pass image for every defect/correction pair.

The final database import must publish separate building, room, route, support, landscape, and camera objects. Neither stage may be marked built until post-deployment route and matched-camera QA pass.

DRAFT · NOT AS-BUILT

DRAFT — NOT AS-BUILT — LIVE CLOSEOUT GATES PENDING

# Concord Broadcast Exchange

**Project ID:** `CBE-001`
**Status:** frozen architectural source of truth; implementation and live release remain pending
**District:** Concord Data-District Service Town
**Prepared:** 2026-07-28 UTC
**Coordinate schedule:** `concord-broadcast-exchange-coordinate-schedule.json`
**Adult-content boundary:** architecture, furniture silhouettes, lighting, circulation, controlled access, and hospitality atmosphere only. There are no figures, body-part motifs, explicit images, explicit signs, or depicted sexual acts.
**Cannabis boundary:** the two botanical-retail rooms and open-air garden are fictional Minecraft placemaking. They do not represent a real Iowa license, product, transaction, consumption instruction, or legal claim.

---

## 1. Binding design decision

The Concord Broadcast Exchange is the ordinary-looking media building that quietly became a district within a district. Concord Road first presents a credible brick-and-copper café, cowork hall, creator reception, and glazed showcase. The deeper production bar contains podcast, gaming, variety, and adults-only performance streaming rooms. An arcade, two billiards rooms, and a creator lounge make it possible to spend an entire shift break inside without the frontage becoming a themed façade.

Below that ordinary building are two clearly separated levels:

- **B1 / Night Market:** two original Belle Époque-inspired cabaret and exhibition halls, two coffee rooms, two fictional botanical-retail rooms, after-show lounge, backstage rooms, and an open-to-sky sunken garden;
- **B2 / Set Lab:** eight non-graphic bondage-themed capture rooms, four shared control booths, scenery/prop/equipment support, post-production, storage, and plant.

The underground spaces are not a confusing tunnel attraction. Public, creator/performer, service, tower-maintenance, and emergency routes remain legible and independent. Nothing connects to Ravensgate, the Worker Town owner corridor, the Gilded Raven owner corridor, an inactive portal room, or a future owner-city reservation.

A tall lit lattice broadcast tower is visually connected to master control by a glazed cable gallery. A separate fenced satellite-maintenance pad holds one large, four medium, and four small dish analogues, an equipment shelter, and a service apron. These are fictional visual infrastructure. There are no real frequencies, radio-security topology, transmission parameters, or compliance claims.

---

## 2. Coordinated site and factual survey

The data-district siting team reserved the Broadcast Exchange at `x 680..730, z -425..-350`. Public arrival is from the west toward the campus road; service arrival is from the east; independent discharge directions are north and south. The satellite pad is surface-only immediately east of that reservation.

The following census was read from the immutable snapshot `data/worldsnap-town-expansion-expanded-baseline-20260728T0405Z/region`, SHA-256 `e612b1feabcf8bd81e427804e0c5cdccea5aac79ef543cadbf2b05d360de7a5a`. It did not connect to or mutate the live world.

| Survey object | Survey bounds | Ground range | Fluid / block-entity result | Binding consequence |
|---|---|---|---|---|
| Main studio | `[680,25,-425,715,100,-350]` | y `56..66` | 0 fluid, 0 lava, 0 bubble column, 0 block entities; 1,452 gravity cells | B1/B2 envelope is dry; top-down pre-support and a new same-moment census remain mandatory |
| Broadcast tower | `[717,25,-425,730,150,-411]` | y `62..64` | 0 fluid, 0 lava, 0 bubble column, 0 block entities; 132 gravity cells | Tower may use the north service bench after a structural/fall-protection analogue review |
| Sunken garden | `[717,25,-380,730,100,-352]` | y `55..64` | 0 fluid, 0 lava, 0 bubble column, 0 block entities; 149 gravity cells | Open-to-sky terracing can follow the existing depression without a giant slab |
| Satellite pad | `[737,25,-425,769,100,-390]` | y `63..65` | 169 water cells below y45 in this survey band, 0 lava, 0 bubble column, 0 block entities; 481 gravity cells | Surface-only work at y62 and above; no basement, trench, deep footing, drain, or conduit may disturb the buried water |

The wider satellite-column census found water at `x 737..766`, `y 0..45`, `z -404..-390`. The pad therefore uses a shallow floating apron and above-grade utility bridge. The buried water is a protected exclusion, not a nuisance pocket to drain.

The natural site is not level. The building receives a compact y65 floor datum, but its perimeter uses y63/y64 planted benches, a retained low point near the south garden, short planted slopes, and a bridge condition where the ground drops. There is no district-wide flat pad or exposed cliff.

DRAFT - NOT AS-BUILT

| DRAFT — NOT AS-BUILT — LIVE CLOSEOUT GATES PENDING | | |
|---|---|---|
| **Object ID** | **Exact bounds** | **State** |
| `CBE-SHELL-001` | `[680,38,-425,715,84,-350]` | Main two-story/two-basement shell |
| `CBE-TOWER-001` | `[717,64,-425,730,145,-411]` | Landmark lattice tower and maintenance base |
| `CBE-GARDEN-001` | `[717,53,-380,730,64,-352]` | Open-to-sky B1 sunken garden |
| `CBE-SAT-001` | `[737,62,-425,769,78,-390]` | Surface-only dish field |
| `CBE-SERVICE-001` | `[716,63,-410,730,68,-382]` | East loading/service lane and above-grade utility interface |

The satellite reservation carries a no-entertainment/no-lodging buffer through `[733,60,-429,773,90,-386]`. The final Concord collision pass must prove that the pad is separated from the motel, Night Court, future-entertainment parcels, and any power yard. The existing Concord entertainment/beehive reserve centered near `(759,69,-340)` remains outside the pad; its required five-block no-target buffer remains binding.

---

# 3. Research translated into design

## 3.1 Broadcast production and acoustics

The U.S. Air Force television-production facility description groups a soundproofed studio with set construction/storage, scenery storage, video and audio control, equipment support, and substantial electrical/HVAC demand. That supports the Exchange's production rooms, master control, equipment checkout, loading, scenery workshop, and plant as one coordinated facility rather than a row of empty sets.

The Department of Defense architecture criteria say broadcast facilities need an acoustical consultant and that acoustic design must coordinate sound isolation, mechanical noise/vibration, room finishes, and adjacency. The Exchange therefore:

- keeps loading, arcade, billiards, plant, and cabaret rooms away from podcast microphones through buffers and separate structural bays;
- gives every microphone room an acoustic vestibule analogue;
- puts noisy plant and scenery support on the east/service side;
- avoids back-to-back studio doors;
- uses isolated-looking floors/ceilings, soft wall bands, and low-noise supply plenums as Minecraft analogues; and
- treats all numeric acoustic performance as a future specialist task, not a claim made by the block model.

Sources:

- WBDG / U.S. Air Force — Television Production Facility, FAC 141389
- WBDG / DoD — UFC 3-101-01 Architecture
- OSHA — Occupational Noise Exposure

## 3.2 Assembly routes, sightlines, and egress

The U.S. Access Board requires accessible routes to connect site arrival points, entrances, spaces, and performance/performer ancillary areas. Its assembly guidance protects equivalent lines of sight and seats/bays adjoining—but not overlapping—circulation. Its egress guide explains that accessible spaces generally need two accessible means of egress where two exits are required.

The Exchange translates those principles into Minecraft planning analogues:

- the west walk, ordinary lobby, both halls, stage routes, backstage rooms, B1 garden, and all production levels share the same broad public/creator lift system rather than a hidden accessibility detour;
- Hall A has exactly 84 audience positions: 80 seat blocks and four open-bay analogues with adjacent companion positions among the 80 seats;
- Hall B has exactly 42 audience positions: 40 seat blocks and two open-bay analogues with adjacent companion positions among the 40 seats;
- every audience position sees a real stage and backdrop/screen;
- raked floors, side aisles, rear cross aisles, and open bays remain outside the counted seats;
- north and south stair/lift pairs discharge independently to the exterior;
- below-grade spaces have two separated stair enclosures plus a lift/area-of- refuge visual analogue; and
- final capacity, exit-width, fire-rating, sprinkler, and code determinations remain professional/legal tasks. This Minecraft plan does not claim code compliance.

DRAFT · NOT AS-BUILT

CDC's evidence review says ventilation, separation, and air cleaning do not eliminate secondhand-smoke exposure. The project therefore rejects an enclosed smoking room. Both fictional botanical shops and both coffee rooms are smoke-free.

The only represented consumption place is `CBE-GARDEN-001`: a B1-level, open-to-sky sunken garden with no roof, no smoke particles, no fire/campfire blocks, no staff workstation, and two vestibules between it and enclosed interiors. Its material language—benches, planters, low lights, and an open lightwell—communicates a place to sit without pretending an exhaust fan makes indoor smoke safe.

Source:

- CDC — Ventilation Does Not Effectively Protect People from Secondhand Smoke

### 3.4 Tower and satellite visual infrastructure

FAA guidance says structures over 200 feet/61 metres above ground normally receive marking/lighting consideration, while the actual recommendation depends on an aeronautical study. The Exchange tower uses red warning-light analogues at its crown and intermediate maintenance decks solely as a visual prompt. It is not a real-height equivalency or compliance representation.

OSHA's tower resources emphasize fall protection, training, and safe access. The tower therefore has a fenced base, locked-looking maintenance gate, internal ladder/cage analogue, rest platforms, maintenance shelter, and a separate service route. Public circulation never passes through the fall zone.

NASA describes a ground station as antenna, feed, modem/control, software, foundations, and operations/maintenance infrastructure. That supports a multi-scale dish field, equipment shelter, maintenance apron, and visible master-control relationship without exposing real frequencies or system topology.

---

## 4. Architectural character and materials

### 4.1 Ordinary Concord Road face

- dark red brick, brown terracotta, dressed stone base, oxidized-copper trim, warm oak doors, and large but not full-glass café/cowork windows;
- one vertical `CONCORD BROADCAST EXCHANGE` blade sign and restrained ON AIR light boxes;
- café awning, creator bench, bicycle/shuttle lay-by analogue, rain garden, and trees;
- no erotic sign, figure, body-part motif, drug leaf, giant screen, or blank service wall;
- night-court identity appears only after entering the building or turning into the service-town interior.

### 4.2 Production levels

- charcoal/deepslate acoustic shells, wool and carpet absorption analogues, cyan/amber wayfinding bands, dark-oak equipment desks, and glass control windows;
- every studio receives a real backdrop, camera position, key/fill/back-light rig, operator desk, storage niche, and acoustic vestibule;
- adult-performance rooms use abstract canopies, textiles, upholstered bench analogues, and controllable colored light only;
- no studio is an empty decorated cube.

### 4.3 B1 Night Market

- original Belle Époque vocabulary: plum/crimson velvet-color wool, dark oak, gilded copper, patterned blackstone/terracotta floors, curved balcony fronts, floral plaster analogues, and warm chandeliers;
- it may evoke the exuberance of late-19th-century cabaret architecture but does not copy Moulin Rouge's windmill, name, marks, exact interior, or façade;
- Hall A is the larger 84-position broadcast cabaret; Hall B is a more intimate 42-position exhibition salon;
- two coffee rooms and two fictional botanical boutiques form a small indoor market street outside the halls.

### 4.4 B2 Set Lab

- pale stone structural liner, black/gray service floor, plum/cyan room identities, bright task lighting, clear numbered doors, and visible service spine;
- eight non-graphic bondage-themed rooms use modular frames, fabric panels, padded-furniture analogues, and lighting grids only;
- there are no figures, restraints applied to a figure, explicit text, or sexual animation.

DRAFT — NOT AS-BUILT

## 5. Exact program and room counts

All room IDs and exact bounds are machine-readable in the coordinate schedule. Bounds include the room shell. Corridors, wall thickness, and vestibules are separate objects and are not double-counted as rooms.

### 5.1 G0 — y65 floor / y66..72 clear

| Program | Exact count | IDs / notes |
|---|---|---|
| Public café | 1 | `CBE-G0-CAFE-001`, ordinary street frontage |
| Reception/check-in | 1 | `CBE-G0-LOBBY-001` |
| Cowork commons | 1 | `CBE-G0-COWORK-001` |
| Creator commons | 1 | `CBE-G0-COMMONS-001` |
| Public showcase | 1 | `CBE-G0-SHOWCASE-001` |
| Master control | 1 | `CBE-G0-MCR-001`, direct visual/cable link to tower |
| Ingest/QC | 1 | `CBE-G0-INGEST-001` |
| Edit suites | 2 | `CBE-G0-EDIT-001..002` |
| Podcast rooms | 6 | `CBE-G0-POD-001..006` |
| Shared podcast control rooms | 3 | `CBE-G0-PODCTL-001..003` |
| Gaming streaming minis | 4 | `CBE-G0-GAME-001..004` |
| Variety streaming minis | 2 | `CBE-G0-VAR-001..002` |
| Equipment checkout | 1 | `CBE-G0-GEAR-001` |
| Public toilets | 2 | `CBE-G0-WC-001..002` |
| Staff/creator focus offices | 4 | `CBE-G0-OFFICE-001..004` |

### 5.2 G1 — y74 floor / y75..82 clear

| Program | Exact count | IDs / notes |
|---|---|---|
| Arcade | 1 | `CBE-G1-ARCADE-001`; acoustically buffered from studios |
| Billiards rooms | 2 | `CBE-G1-BILLIARDS-001..002`; two tables each, four total |
| Creator lounge | 1 | `CBE-G1-LOUNGE-001` |
| Demonstration-kitchen studio | 1 | `CBE-G1-KITCHEN-001`; ordinary food/lifestyle production |
| Gaming streaming minis | 6 | `CBE-G1-GAME-005..010` |
| Variety streaming minis | 7 | `CBE-G1-VAR-003..009` |
| Adult-performance streaming minis | 8 | `CBE-G1-ADULT-001..008`; non-graphic |
| Mini-studio technical hubs | 3 | `CBE-G1-TECH-001..003` |
| Quiet/recovery rooms | 2 | `CBE-G1-QUIET-001..002` |
| Public toilets | 2 | `CBE-G1-WC-001..002` |

**Combined above-ground studio totals:** 6 podcast rooms, 10 gaming rooms, 9 variety rooms, 8 adult-performance rooms, 3 shared podcast controls, 3 mini-studio technical hubs, 1 master control, 1 ingest/QC room, and 2 edit suites.

### 5.3 B1 — y53 floor / y54..63 clear

| Program | Exact count / capacity | IDs / notes |
|---|---|---|
| Belle Époque-inspired Hall A | 1 / 84 audience positions | 80 seats + 4 open-bay analogues; real stage, screen/backdrop, two side aisles, rear cross aisle |
| Belle Époque-inspired Hall B | 1 / 42 audience positions | 40 seats + 2 open-bay analogues; real stage, screen/backdrop, side aisles |
| Coffee rooms | 2 | `CBE-B1-COFFEE-001..002`; smoke-free |
| Fictional botanical boutiques | 2 | `CBE-B1-BOTANICAL-001..002`; smoke-free, no product/transaction simulation |
| After-show lounge | 1 | `CBE-B1-LOUNGE-001`; smoke-free |

DRAFT · NOT AS-BUILT

DRAFT — NOT AS-BUILT — LIVE CLOSEOUT GATES PENDING

| | | |
|---|---|---|
| Open-to-sky garden | 1 / 24 seats | `CBE-GARDEN-001`; no staff station, smoke/fire blocks, or roof |
| Green rooms | 2 | `CBE-B1-GREEN-001..002` |
| Dressing rooms | 6 | `CBE-B1-DRESS-001..006` |
| Wardrobe/makeup rooms | 2 | `CBE-B1-WARDROBE-001..002` |
| Age/coat/check-in room | 1 | `CBE-B1-CHECK-001` |
| Hall control booths | 2 | `CBE-B1-HALLCTL-001..002` |
| Public toilets | 2 | `CBE-B1-WC-001..002` |
| Staff/performer toilet | 1 | `CBE-B1-WC-003` |

### 5.4 B2 — y41 floor / y42..51 clear

| Program | Exact count | IDs / notes |
|---|---|---|
| Non-graphic themed set rooms | 8 | `CBE-B2-SET-001..008` |
| Shared set-control booths | 4 | `CBE-B2-SETCTL-001..004` |
| Scenery workshop | 1 | `CBE-B2-SCENERY-001` |
| Prop store | 1 | `CBE-B2-PROP-001` |
| Equipment cage | 1 | `CBE-B2-GEAR-001` |
| Underground edit suites | 2 | `CBE-B2-EDIT-001..002` |
| Green/recovery rooms | 2 | `CBE-B2-GREEN-001..002` |
| Clean storage rooms | 2 | `CBE-B2-STORE-001..002` |
| Electrical/UPS visual plant | 1 | `CBE-B2-ELEC-001` |
| Mechanical/acoustic plant | 1 | `CBE-B2-MECH-001` |
| Staff toilet | 1 | `CBE-B2-WC-001` |

DRAFT - NOT AS-BUILT

---

# 6. Adjacency and isolation rules

## 6.1 Must-touch adjacencies

- master control → ingest/QC → edit suites → cable gallery;
- cable gallery → tower equipment base;
- each two podcast rooms → one shared podcast control;
- gaming/variety/adult mini-room banks → nearest technical hub;
- Hall A/Hall B → dedicated hall control → backstage spine;
- backstage spine → green rooms → wardrobe/makeup → dressing rooms;
- B2 set pairs → shared control booth → equipment/scenery support;
- service lane → loading room → freight lift → B1/B2 service spine;
- B1 coffee/botanical rooms → Night Market circulation, not backstage;
- open-air garden → two vestibules → Night Market; garden → independent exterior stair/ramp analogue.

## 6.2 Must-not-touch adjacencies

- podcast rooms may not share a wall with arcade, billiards, loading, tower machinery, halls, workshop, mechanical plant, or the open-air garden;
- public café/cowork circulation may not pass through adult rooms, backstage, B2 set labs, loading, tower base, or satellite pad;
- botanical shops and coffee rooms may not contain smoking/fire particles;
- the satellite pad may not share a public path or foundation with the motel, Night Court, future entertainment, or a power yard;
- no room may connect to Ravensgate, Worker Town/Gilded Raven owner routes, portal rooms, or the future owner-city reservation.

### 7.4 Circulation and operational routes

| Route ID | Users | Exact sequence | Isolation |
|---|---|---|---|
| `CBE-ROUTE-PUBLIC-01` | café/cowork/showcase visitors | west forecourt → lobby → café/cowork/showcase | never enters production or nightlife |
| `CBE-ROUTE-CREATOR-01` | checked-in creators | lobby → creator commons → north public stair/lift → G1 studio spine | controlled threshold after lobby |
| `CBE-ROUTE-NIGHT-01` | adults-only event guests | lobby age desk → broad B1 stair/lift → Night Market → halls/coffee/botanical/lounge/garden | no backstage/B2 access |
| `CBE-ROUTE-PERFORMER-01` | performers/production crew | east check-in → service core → green/wardrobe/dressing → stage/set doors | never crosses seated audience queue |
| `CBE-ROUTE-SERVICE-01` | deliveries/scenery/equipment | east service lane → loading → freight lift → B1/B2 service spine | no café or public-lobby movement |
| `CBE-ROUTE-EGRESS-N` | all occupied levels | north stair/lift/refuge analogue → north exterior discharge | independent of south discharge |
| `CBE-ROUTE-EGRESS-S` | all occupied levels | south stair/lift/refuge analogue → south exterior discharge | independent of north discharge |
| `CBE-ROUTE-TOWER-01` | maintenance only | east service lane → fenced tower gate → tower shelter/ladder/platforms | no public access; fall zone isolated |
| `CBE-ROUTE-SAT-01` | dish maintenance only | district service road → pad gate → apron/shelter/dish walks | no public/nightlife path |
| `CBE-ROUTE-GARDEN-01` | B1 guests | Night Market → vestibule A → open garden → vestibule B/exterior route | open sky; no enclosed recirculating-air claim |

Four broad stair/lift pairs—north public, south public, northeast service, and southeast service—serve all occupied levels. A central freight lift serves equipment and scenery. Every stair uses full block runs, regular landings, continuous guards/handrails, a minimum four-block clear walking width in the Minecraft model, and no jump-only geometry.

---

# 8. Systems and support schedule

## 8.1 Broadcast and data

- one master control, one ingest/QC room, five local control groups (three podcast and two hall), three G1 technical hubs, and four B2 set-control booths;
- visible overhead cable trays run to an east riser and the tower gallery;
- the satellite pad uses one above-grade utility bridge; nothing trenches into the protected water seam;
- systems are represented by colored glass, copper, observers, lamps, and server-rack analogues only—no real network diagram, frequencies, credentials, or security topology.

## 8.2 Mechanical/acoustic

- separate visual air-handling zones for public/café, studios, B1 assembly, B2 sets, plant/service, and toilets;
- no return-air analogue from the open garden;
- mechanical rooms sit east/south of microphone rooms with storage/corridor buffers;
- tower and dish equipment use exterior equipment shelters;
- final acoustic/HVAC performance requires specialist analysis.

## 8.3 Fire/life-safety visual analogues

- two separated discharge directions from every occupied level;
- illuminated-looking exit markers, emergency-light rhythm, refuge/intercom niches, protected-looking stairs, and clear cross aisles;
- no decorative arch, curtain, booth, queue, camera, or seat may reduce aisle clearance;
- no open flame, campfire, lava, smoke particle, or active portal is introduced;
- Minecraft analogues do not constitute code certification.

## 8.4 Back-of-house

- one east loading room with direct freight-lift alignment;
- scenery workshop, prop store, equipment cage, two clean stores, and wardrobe rooms;
- two green rooms at B1, two recovery/green rooms at B2, six B1 dressing rooms, staff toilets, and two G1 quiet rooms;
- waste and deliveries remain east of the public frontage and are screened by brick/copper walls and planting, not a blank façade.

DRAFT · NOT AS-BUILT

### 9.1 `CBE-TOWER-001`

- lattice base: `[718,64,-425,730,72,-413]`;
- seven-block-wide lattice shaft: `[721,73,-422,727,144,-416]`;
- maintenance decks centered at y84, y104, y124, and y144;
- red warning-light visual analogues at the intermediate decks and crown;
- one fenced equipment shelter, one maintenance gate, one internal ladder/cage analogue, one service lay-by, and one glazed cable-gallery link to master control;
- public path and Night Market route remain outside the fenced fall-zone analogue;
- final build must repeat the entity, fluid, block-entity, gravity, and collision census over the full y64..145 envelope.

### 9.2 `CBE-SAT-001`

- fence: `[737,63,-425,769,68,-390]`;
- shallow apron: `[739,63,-423,767,65,-397]`;
- equipment shelter: `[739,64,-403,750,72,-392]`;
- service apron/turning area: `[752,63,-405,767,65,-392]`;
- dish analogues: one large, four medium, and four small;
- no dish extends into public road clearance, tower fall zone, planted buffer, or the preserved beehive/entertainment reserve;
- all footings remain at y62 or above, and all utilities cross above grade;
- no real frequencies, antenna pointing, control credentials, or emissions claims are recorded.

---

## 10. Database and matched-media contract

Every scheduled room/site component is an individual object candidate with:

- stable `objectId`;
- exact 3D bounds;
- floor/program/capacity;
- material and adjacency tags;
- implementation status;
- dependency and exclusion fields; and
- one or more planned camera IDs.

After deployment, the first-pass capture must be joined to the exact database object by ID. A screenshot filename alone is not evidence. The first pass creates a defect log for empty rooms, blocked sightlines, confusing entries, unwalkable stairs, bad terrain seams, missing stage/screen, material repetition, or route contamination. Fixes are followed by a second matched capture from the same camera. Only second-pass accepted media may enter the Sites showcase.

---

## 11. Camera candidates

| Camera ID | Position → target | Required evidence |
|---|---|---|
| `CBE-CAM-001` | `(666,70,-387)` → `(684,69,-387)` | ordinary Concord Road façade, sign, café/cowork windows |
| `CBE-CAM-002` | `(684,69,-404)` → `(689,68,-395)` | café-to-lobby transition and ordinary frontage |
| `CBE-CAM-003` | `(701,69,-412)` → `(704,69,-421)` | master control, ingest, tower cable link |
| `CBE-CAM-004` | `(704,69,-396)` → `(694,69,-396)` | paired podcast rooms and real control window |
| `CBE-CAM-005` | `(704,78,-405)` → `(693,78,-405)` | G1 mini-studio row and wayfinding |
| `CBE-CAM-006` | `(688,78,-395)` → `(686,78,-414)` | arcade and two-table billiards identity |
| `CBE-CAM-007` | `(689,58,-399)` → `(688,57,-419)` | Hall A real stage, screen/backdrop, rake and 84 positions |
| `CBE-CAM-008` | `(689,58,-381)` → `(688,57,-395)` | Hall B stage, rake and 42 positions |

Exact camera block viability must be rechecked against the post-build snapshot. If a camera cell is occupied, move it minimally and record the reviewed replacement rather than fabricating a match.

---

# 12. Release gates and acceptance tests

## 12.1 Geometry and state

- all object IDs and bounds in the JSON schedule are generated or explicitly reported deferred;
- zero unreviewed cross-scope target collisions;
- main/tower/garden fluid and block-entity census remains zero in the fresh same-moment snapshot;
- satellite work remains y62+ and does not target any protected water cell;
- gravity cells are pre-supported/top-down handled and exact-listed;
- every forward state has an exact rollback partner;
- zero lava, bubble column, active portal, aquatic block, smoke particle, or fire block is introduced.

## 12.2 Program

- G0 exact counts pass: 6 podcast, 3 podcast control, 4 gaming, 2 variety, 2 edit, 4 focus offices, and all five public rooms;
- G1 exact counts pass: 6 gaming, 7 variety, 8 adult mini studios, 3 technical hubs, 1 arcade, 2 billiards rooms/4 tables, 1 creator lounge, and 1 demo kitchen;
- Hall A has exactly 80 seats + 4 open bays and Hall B exactly 40 seats + 2 open bays;
- B1 has exactly 2 coffee rooms, 2 fictional botanical shops, 2 halls, 2 green rooms, 6 dressing rooms, 2 wardrobe/makeup rooms, and one 24-seat open garden;
- B2 has exactly 8 set rooms, 4 control booths, 1 scenery workshop, 1 prop store, 1 equipment cage, 2 edit rooms, 2 green/recovery rooms, 2 clean stores, and 2 plant rooms;
- the tower has four maintenance decks and red warning-light visual analogues;
- the pad has exactly 1 large + 4 medium + 4 small dish analogues.

## 12.3 Walkability, accessibility, and routes

- public, creator, event, performer, service, tower, satellite, and garden routes pass independently;
- normal walking passes both directions through every public and service route;
- no stair requires jumping; lifts serve the same principal circulation zone;
- stage/backstage and audience routes do not cross;
- open-bay analogues adjoin but do not overlap aisles;
- every occupied below-grade space reaches both north and south discharge systems;
- no Exchange route touches Ravensgate, owner corridors, portal rooms, or the future owner-city reservation.

## 12.4 Content and smoke boundaries

- no explicit image, figure, animation, text, or body-part motif;
- adult rooms remain architectural/non-graphic;
- botanical shops are visibly fictional and smoke-free;
- no indoor smoking room exists;
- the open garden remains roofless, fire/smoke-particle-free, and separated from enclosed interiors by two vestibules;
- no real-world cannabis legality, license, product, sale, or consumption claim.

## 12.5 Terrain, district, and media

- building uses compact benching/bridging, planted slopes, and retained depressions rather than a mega-pad;
- the buried satellite-pad water seam remains unchanged;
- satellite/tower service does not cross motel/Night Court/public circulation;
- final collision report proves pad separation from lodging, nightlife, future-entertainment, power, and beehive reserves;
- all 18 planned cameras receive first-pass evidence, reviewed defect status, any required fix, and second-pass matched recapture;
- database object-to-media joins reference stable object IDs;
- Sites receives only accepted second-pass media and labels the build state truthfully.

DRAFT - NOT AS-BUILT

## 15. Explicit holds

- This document does not authorize a live world release.
- Surface coordinates must be reconciled with the final Concord complete-town generator and the full-build Meta/Google/LightEdge district road/power network. Future expansion parcels beyond those completed campuses remain protected.
- The satellite pad may not receive below-grade work; its water exclusion is binding.
- Tower structural capacity, real fall protection, aviation review, RF safety, fire/life-safety, accessibility, acoustic performance, and cannabis legality are outside a Minecraft model and are not certified here.
- A new same-moment snapshot, exact guards, entity/player clearance, protected inventory review, dry-run with strict-noop reporting, coordinated atomic transaction, post snapshot, bidirectional route QA, and matched evidence are required before any as-built claim.

DRAFT · NOT AS-BUILT

DRAFT — NOT AS-BUILT — LIVE CLOSEOUT GATES PENDING

# Concord Data-District Service Town

**Status:** binding design brief; final coordinates require the shared district terrain/collision survey
**Build scope:** complete town in the Town Expansion R1 release
**Adult-content boundary:** all adult venues are represented through architecture, circulation, color, furniture, stages, and access zoning; no explicit imagery or figures
**Prepared:** 2026-07-28 UTC

---

## Design decision

Concord is the small town travelers do not expect to find beyond the Iowa data-center district. Its road face looks practical and ordinary: gas station, post office, bar, motel sign, trees, and a compact two-street grid. One block behind that frontage is a polished adults-only night court. The court is not an accidental back lot: a 25-room motel and a smaller opulent theater face each other across a shared pedestrianized parking court, with a separate dance/strip club on the short side and reserved entertainment frontage at the rear.

This dual identity makes the town discoverable without dumping every use on the approach road. Buildings form street walls and visible corners. Parking, delivery, pedestrian, performer, and utility movements each have a legible route.

Concord's fictional economy and civic identity are intentionally purpose-built around consensual adult nightlife for the neighboring data-center construction and operations workforce. The town treats that as the workers' characteristic off-shift hobby. Shift-change arrivals, late-night food, hospitality, worker lounges, the shared adults-only court, discreet circulation, and future entertainment growth therefore drive the plan rather than appearing as an afterthought. The build communicates that identity without explicit content.

---

## Research basis

EPA's small-town smart-growth material recommends focusing development in a walkable town center, supporting existing or planned infrastructure, protecting the rural landscape, and deciding clearly where growth should and should not go. Concord translates that into two compact blocks, a defined future-growth edge, and preserved landscape between town and data campuses instead of loose roadside scatter.

Sources:

- EPA — Smart Growth in Small Towns and Rural Communities
- EPA — Putting Smart Growth to Work in Rural Communities
- FHWA — Small Town and Rural Multimodal Networks resources

The U.S. Access Board states that a site's accessible route should connect parking, loading, streets/sidewalks, and accessible entrances, and that parking access aisles must connect directly to those routes. Its transient-lodging standards inform the motel's same-quality accessible-room analogues and continuous circulation. This Minecraft build does not claim legal compliance.

Sources:

- U.S. Access Board — Accessible Routes
- U.S. Access Board — Parking
- U.S. Access Board — ADA Standards and transient lodging

USPS describes small community post offices as local service institutions and documents contract/community post-office models. That supports a compact, frontage-facing postal counter and sorting room rather than an oversized civic monument.

Sources:

- USPS — Stations and Branches history
- USPS — Smallest Post Office

---

## Street and block plan

1. **Concord Road / ordinary frontage**
   - two travel lanes with a planted pedestrian edge;
   - gas station and convenience store at the first corner;
   - compact post office on the town-square corner;
   - neighborhood bar opposite the post office;
   - motel arrival/office visible at the night-court turn;
   - marked worker-shuttle stop and shift-change waiting lounge;
   - no blank building backs facing the road.

    - shared parking court with a protected center walk and planted islands;
    - motel on one long side, Gilded Raven Annex theater directly opposite;
    - separate dance/strip-club venue on the short side;
    - age-control entries face the court; deliveries and performers use the rear service lane;
    - architecture is opulent but non-explicit.
3. **Service Lane**
    - motel housekeeping/loading, theater scenery/loading, club deliveries, waste/service yards, and utility access;
    - screened from the shared court but not hidden as a maze.
4. **Future Entertainment Row**
    - two graded, landscaped parcels with completed sidewalk/utility stubs;
    - no temporary clutter or parking that would have to be demolished;
    - the street terminates in a planted turning court that can extend later.

---

# Building programs

## Concord Fuel & General

- eight covered fueling positions represented by four double-sided islands;
- convenience store with counter, grocery wall, coolers, small hot-food area, staff room, storage, and toilets;
- separate service apron and delivery door;
- visible canopy, price-tower analogue, safe pedestrian path, and protected landscape buffer from the town sidewalk.

## Concord Community Post

- small public lobby and counter;
- PO-box wall;
- secure-looking but non-tactical sorting room;
- carrier worktables, parcel room, staff office/break room, and rear loading door;
- civic clock/sign frame and a bench plaza at the front corner.

## The Last Relay bar

- neighborhood bar, roughly 40 seats;
- horseshoe counter, booths, small stage, kitchen, cold/storage room, staff room, and toilets;
- front porch facing Concord Road and a quieter rear garden;
- no connection into the adult theater's performer routes.

## Concord Motor Lodge — exactly 25 rooms

- two-story courtyard motel;
- 13 guest rooms at ground level and 12 at upper level;
- two ground-floor same-quality mobility-feature analogues nearest the lobby;
- every room receives a sleeping zone, washroom, wardrobe, desk/seating, and exterior window;
- lobby/office, two-room manager office and lounge, breakfast nook, laundry, linen/housekeeping on both levels, staff room, vending alcove, toilets, and enclosed broad stair/lift cores at opposite ends;
- balconies and room doors face the shared night court; service rooms face the rear lane;
- the motel sign and public lobby are visible from Concord Road without making the adult court explicit from the highway.

## Gilded Raven Annex — smaller adult theater

- 72-seat main room with a real stage, proscenium, two balcony tiers, and ceiling centerpiece;
- open bowl-edge circulation rather than doors into confusing blind corridors;
- three five-seat private salon theaters and two single-guest performance salons, all non-graphic;
- court bar, supper room, two small restaurant rooms, coat/check-in, and age-control lobby;
- dressing rooms, green room, wardrobe, rehearsal room, scenery store, loading door, staff break room, and performer-only rear route;
- one concealed public discovery passage from the town bar garden to the theater court, with an ordinary signed route also present;
- one owner/management room and a short local service passage only. This mini theater does **not** connect to the Worker Town owner tunnel or Ravensgate.

## Concord Night House — dance/strip-club venue

- separate lobby and age-control threshold;
- one central non-graphic dance/performance stage with believable audience sightlines;
- lounge booths, bar, small kitchen, coat check, toilets, two dressing rooms, green room, wardrobe, office/count room, storage, and rear loading;
- no explicit figures, images, or text.

DRAFT · NOT AS-BUILT

## Terrain, parking, and landscape

- Fit the two-block plan to surveyed stepped benches. Use short planted slopes between street levels; do not place the town on one giant artificial slab.
- The motel/theater joint lot is a real shared court: marked circulation around the perimeter, planted center walk, drop-off, protected accessible-route analogues, and a direct link to every public entrance.
- Gas-station circulation stays outside the night-court pedestrian core.
- If the selected parcel includes useful drainage, make it a small planted town pond/detention garden at the future-entertainment edge. Drain only an isolated nuisance pocket after the district fluid census.
- Preserve a green buffer between the town and each power yard or transmission corridor.

---

# Release gates

- gas station, post office, bar, motel, theater, and club are fully enclosed and walkable;
- motel room count is exactly 25, with 13 ground and 12 upper rooms;
- motel and theater face the same shared court;
- main theater has exactly 72 seats, three five-seat salons, and two single-guest salons;
- ordinary/public, service, performer, and management routes are distinct;
- no mini-theater route connects to Ravensgate, the Worker Town owner corridor, or an offline portal room;
- two future entertainment parcels and an extendable street/utility stub remain;
- grading uses terrain benches and planted transitions, not a flat mega-pad;
- town/power separation and parking/pedestrian routes are legible;
- no active portal, lava, bubble-column, or introduced aquatic state;
- protected block-entity and live-entity gates pass;
- exact rollback covers every town target.

DRAFT · NOT AS-BUILT

DRAFT — NOT AS-BUILT — LIVE CLOSEOUT GATES PENDING

# Cross-scope interface contract proposal

**Decision:** `PROPOSED_ZERO_APPROVED_RELEASE_BLOCKING`
**Machine contract:** `cross-scope-interface-contract-proposal.json`
**Underlying audit:** `evidence/redevelopment-cross-scope-point-in-time-audit.json`

This proposal converts cross-scope geometry from an informal last-writer-wins behavior into a default-deny release contract. It approves **zero** current interfaces. The underlying counts came from a deliberately stale diagnostic compile, so the final compiler must regenerate them from a source hash captured both before and after generation.

An approved interface must name the exact scope direction, source and destination roles, normalized state transitions, inclusive bounds, cell count, and SHA-256 of the full sorted cell set. No wildcard, reverse-direction assumption, sample-only allowance, or count-only allowance is valid. Any drift must abort generation and report `BLOCKED_UNAPPROVED_CROSS_SCOPE_OVERRIDES`.

---

## Non-Iowa decision

The long overlapping roads are not interfaces. They are duplicate ownership:

- Parkway to RV road: 3,169 stale diagnostic cells.
- Freight to Parkway: 1,581 cells.
- Freight to RV road: 682 cells.
- ceremonial road to freight: 481 cells.

Those corridors need one canonical owner, with a small independently reviewed junction only where routes actually diverge.

Other broad overlaps also need redesign rather than approval: the competing Adventure Exchange/Ravencrest gate envelopes, Adventure Exchange/Northwind bath edge, Oasis/freight conflict, and the green link entering the HL-A building envelope.

Small junctions, bulkheads, lift landings, and quay supports may become valid interfaces after regeneration. The machine proposal records the required resolution for all 23 non-Iowa blocker pairs. None becomes approved until its final exact cell set and route, enclosure, egress, containment, or hydrology proof are attached.

---

## Compiler requirement

`Model.set()` must retain the prior role as well as both states, aggregate exact cells by scope/role/state transition, and compare the final aggregate to the contract before any operation file is written. `READY_FOR_PREFLIGHT` must require:

1. zero unapproved cross-scope overrides;
2. every approved entry matching its exact sorted-cell hash;
3. every acceptance predicate true;
4. zero protected block-entity targets and zero unresolved terrain/fluid gates;
5. complete database object and first/second-pass camera manifests for every release object.

DRAFT · NOT AS-BUILT

DRAFT — NOT AS-BUILT — LIVE CLOSEOUT GATES PENDING

# Ravensreach Guild Hall and Gilded Ledger Bar

**Status:** design source of truth; survey hold; no live-world authorization
**Workstream:** Town Expansion / Guild Hall and Bar
**Prepared:** 2026-07-28 UTC
**Scope:** two basements, three occupied storeys, direct pavilion/Garth integration, guild court and ceremonial rooms, dormitories, four kitchens, living spaces, theater, lecture hall, dance hall, monumental bar, service logistics, statues, landscape interfaces, build phases, and acceptance gates
**Companion machine schedule:** `guild-hall-program.json`

---

## 1. Executive decision

Build the Guild Hall as the **eastern bookend of the active Ravensgate Garth**. The enlarged library remains the western bookend. The Garth, south stoa, and library loggia are the active “pavilion” ensemble and become the ceremonial hinge:

```
ENLARGED LIBRARY  ⇄  LIBRARY LOGGIA / GARTH / STOA  ⇄  GUILD HALL
       west                shared pavilion                 east
```

The former `central-pavilion` is not an active building. The current manifest records it as demolished on 2026-07-26 and superseded by Ravensgate. A design that reconnects to that demolished shell would be false coordination.

The Guild Hall is intentionally lavish but legible. The money is expressed in craft, hierarchy, light, heraldry, carved figures, material depth, and rooms that actually work—not in a random mixture of rare blocks.

The preferred hold envelope is:

| Item | Design hold |
|---|---|
| Building | `x[-63,-11] z[-464,-406]` |
| Public datum | floor support `y67`; walking surface `y68` |
| B2 support | `y52` |
| B1 support | `y60` |
| Ground support | `y67` |
| Second support | `y75` |
| Third support | `y83` |
| Roof | spring `y91`; ridge target `y106` |
| Pavilion link | west portico centered on `z[-444,-432]` |
| Principal face | west, toward the Garth |
| Service face | east, to a new screened service lane |
| Concealed parking hold | below the east service court; final coordinates after survey |

These are **coordinate assumptions, not build coordinates**. The footprint extends beyond the currently cataloged Ravensreach active envelope and must be proven against a new immutable snapshot, every occupied block, terrain, trees, water, entities, protected features, and current routes before engineering.

---

## 2. Evidence baseline

### 2.1 Current world facts

The accepted post-Wave-2 atlas and build manifest establish:

- Ravensreach public grade is `y67`.
- The active six-level civic library occupies `x[-147,-108] z[-451,-423]`; its public entrance is `(-128,68,-424)`.
- The retired Central Pavilion occupied `x[-107,-63] z[-451,-423]`.
- Ravensgate now supplies the civic sequence through Bell-Gate, the Garth, library loggia, south stoa, belvedere, Long Water, and park.

DRAFT — NOT AS-BUILT

- The current library, Moot/Sanctum, Market, and Grange buildings have accepted stair-only vertical circulation. Ladders are not an acceptable primary route.

The immutable design reference is:

`data/worldsnap-wave2-postrelease-d05ac7822795eff0-20260728/region`

with SHA-256:

`d05ac7822795eff03340e46695a6f3accbdffdf82d11559d857e17b4d1962999`

It is evidence, not a future execution baseline. A fresh snapshot is required after the town-expansion survey and immediately before any guarded release.

## 2.2 Historical and operational precedents

The precedents resolve program, not style-copying:

1. **London Guildhall:** the City of London describes the Great Hall as 153 ft long and 85 ft high, with galleries, an adjoining kitchen, a built-in stage, and flexible banquet/theater arrangements. It places two major medieval crypts beneath the hall and uses monumental figures, stained glass, livery shields, banners, and a great timber roof to make institutional history visible. This establishes the vertical hierarchy: social/service undercroft, great ceremonial room above, and heraldic roof volume.
   Sources: Great Hall, visual guide, East and West Crypts.

2. **York Merchant Adventurers' Hall:** the Company describes a Great Hall directly over an undercroft, with a chapel that remains part of the complex. York's official historic-environment record documents an eight-bay, two-range hall/undercroft, chapel, entrance extension, and Governor's Parlour, with timber framing, brick, stone, tile roofs, lattice glazing, and a central undercroft arcade. This establishes a plausible medieval-communal material language and a mixed business/social/charitable institution.
   Sources: the Company’s Hall history, City of York Historic Environment Record.

3. **London livery-company hospitality:** Vintners' Hall actively programs a Livery Hall, Court Room, Drawing Room, smaller committee rooms, boardroom, roof garden, and bedrooms. Its Livery Hall supports large dinners, conferences, fundraising, and wine tasting; its Drawing Room is a pre-dinner reception and conference-catering space. Goldsmiths' Hall similarly presents adaptable grand rooms for intimate meetings through large receptions. This establishes the required hierarchy between procession, court business, reception, dining, service, and overnight accommodation.
   Sources: Vintners’ Hall rooms, Goldsmiths’ Hall.

4. **Fraternal-hall scale and specialization:** the Library of Congress records the 1926 Detroit Masonic Temple as a 1,037-room institution containing theaters, a chapel, eight lodge rooms, a large drill hall, two ballrooms, cafeteria, dining rooms, offices, and recreation. HABS measured drawings of Philadelphia's Masonic Temple show purpose-designed lodge-room plans rather than one undifferentiated hall. The Ravensreach building is far smaller, but adopts the same principle: specialized public, ceremonial, learning, residential, entertainment, and service rooms connected by a controlled circulation system.
   Sources: Detroit Masonic Temple record, Philadelphia second-floor measured plan.

5. **Assembly and acoustic planning:** the Whole Building Design Guide calls for auditorium spans and heights that accommodate sightlines and acoustics, level accessible seating positions, flexible stage lighting, and acoustic separation; it cites NC 20–30 and STC 40–50 as real-world targets for performance/presentation spaces. The University of Houston's facilities criteria call for NC-30 lecture halls/auditoriums and a speech-band reverberation time no greater than one second. Minecraft does not simulate these metrics, so they become geometric proxies: nonparallel or articulated walls, absorbent-looking rear surfaces, hard stage reflectors, deep vestibules, and no shared open doorway between loud and quiet rooms.
   Sources: WBDG Auditorium, University of Houston Campus Design Guidelines.

6. **Accessibility:** the U.S. Access Board's 2010 ADA Standards require a 60-inch turning space, accessible dining surfaces at 28–34 inches, an accessible service-counter portion no higher than 36 inches, and accessible routes to dining and performance areas. The route guide uses a 36-inch continuous clear width as the baseline. Minecraft cannot certify ADA compliance, but it can avoid gratuitous barriers: use at least three-block public corridors, five-block turning courts, a one-slab lower bar section, level seating bays, and normal-walk stair routes to every floor.
   Sources: 2010 ADA Standards, Accessible Routes guide.

7. **Life safety:** UK Approved Document B treats horizontal and vertical escape as separate design problems and warns that bar/restaurant use is not a trivial small-premises exception. OSHA's exit-route standard requires permanent, unobstructed routes and addresses independent exits, exit discharge, door swing, locks, width, and headroom. NIST's Station nightclub investigation found that crowding at the main entrance impaired egress and that untenable conditions developed rapidly; its follow-up records stronger sprinkler, egress-inspection, and crowd-manager provisions. Minecraft is not a code jurisdiction, but the design response is mandatory: two remotely separated normal-walk stairs from every assembly level, a third service stair, no locked/decorative-only exit, three-block minimum headroom, and route tests in both directions.
   Sources: Approved Document B, Volume 2, OSHA exit-route design, NIST Station investigation, NIST recommendation actions.

cleaned floors need drainage and sealed/coved junctions, carpet is excluded from prep, refrigeration, warewashing, toilet, and refuse areas. FDA inspection procedures require conveniently located, accessible handwashing in food prep, dispensing, and warewashing areas. The Brewers Association's draught manual separates gas, beer, and cooling systems, insists on constant temperature from keg to glass, and treats cleaning/maintenance as part of system design. HSE notes that CO2 is invisible, odorless, heavier than air, and can collect in cellars. These become distinct cleanable kitchen palettes, no carpet in service rooms, short protected beer-line chases, an isolated ventilated gas niche, a cellar alarm fixture, and a dirty-dish route that never crosses plating.
Sources: FDA Food Code 2022, FDA inspection procedures, Brewers Association Draught Beer Quality Manual, HSE carbon-dioxide hazards.

---

# 3. Architectural identity

## 3.1 Three-sentence identity test

1. From the Garth, the visitor sees a long stone-and-timber guild palace with a deep central portico, a cross-gable over the entry, copper cresting, and four oversized statues representing Craft, Learning, Fellowship, and Stewardship.
2. Inside, a five-block processional spine reveals the Great Hall's hammer-beam roof, court chamber, red-and-gold undercroft, and a sequence of smaller, richer rooms instead of one empty box.
3. At B1, the Gilded Ledger is unmistakably a working grand bar: an illuminated three-tier back bar, U-shaped service counter, barrel-vaulted ceiling, booths, communal table, fireplace, stage, glasswash, finishing kitchen, keg/cask cellar, and separate escape/service routes.

If any of those readings is absent from the same-camera exterior/interior evidence, the design has not landed.

## 3.2 Massing

- **Base:** two expressed stone undercrofts, mostly below grade, with a sunken south garden and limited light wells.
- **Body:** three masonry/timber storeys around a west-facing processional portico.
- **Roof:** steep deepslate-tile roof, a long ridge parallel to Z, central cross-gable at the Garth axis, two smaller stair-tower caps, and copper lanterns/cresting.
- **Great Hall:** a two-storey reading within the north half of the building; its upper wall and roof volume must read externally even though the second storey also contains independent rooms.
- **Service wing:** east edge, deliberately quieter, with a screened delivery court and vertical service core.

## 3.3 Exterior palette

| Role | Primary blocks | Use rule |
|---|---|---|
| Foundation | stone bricks, cracked/mossy stone bricks, tuff bricks | darkens toward B2; moss only at grade/light wells |
| Main wall | tuff bricks, stone bricks, calcite dressings | no flat wall run longer than 9 without pier, window, or recess |
| Frame | stripped dark oak logs, dark oak planks | structural bays and gables; not random stripes |
| Roof | deepslate tiles/stairs/slabs | steep, layered eaves; no flat dark rectangle |
| Metal | waxed cut copper, exposed copper, chains | cresting, gutters, lanterns, doors; deliberate green patina accents |
| Glazing | gray/light-gray panes, amber/yellow accent glass | tall grouped windows; stained crests only in ceremonial rooms |
| Wealth accent | chiseled quartz, gilded blackstone, gold blocks sparingly | capitals, bosses, heraldic focal points; never broad wallpaper |
| Paving | bricks, granite, mud bricks, polished andesite | shared with the Garth but organized in guild-knot bands |

## 3.4 Interior palette by acoustic/service character

- Great Hall and Court: dark oak, calcite, red carpet, banners, gilded blackstone bosses, stained glass, high lanterns.
- Theater and lecture: dark wood at front/reflecting surfaces, wool panels and articulated rear/side walls, explicit screen/stage, low aisle lighting.
- Dance Hall: sprung-looking dark-oak/slab floor, wool drapery bands, nonparallel pilasters, musicians' dais, protected chandeliers.
- Dormitories/living: spruce/dark-oak mix, wool, bookshelves, fireplaces, individual storage and lighting.
- Kitchens/service: polished andesite, smooth stone, quartz/iron counters, sealed-looking tile bands, no carpet.
- Bar: dark oak, polished blackstone, tuff-vault ribs, amber glass, copper, red carpet only in dry patron zones.

---

# 4. Level and room schedule

Coordinates below are inclusive design zones inside the hold envelope. Core walls, columns, stairs, and door thickness are not counted as net room area.

DRAFT — NOT AS-BUILT — LIVE CLOSEOUT GATES PENDING

| ID | Room | Design zone | Approx. blocks | Function / required detail |
|---|---|---|---|---|
| B2-01 | Ale, wine, and cask cellar | `x[-49,-33] z[-462,-440]` | 391 | racked barrels, bottle bins, locked vintage cage, tasting bench, drainage aisle |
| B2-02 | Guild treasury and archive | `x[-31,-13] z[-462,-440]` | 437 | charter cases, map drawers, secure stacks, four display vaults, no direct public door |
| B2-03 | Service gallery | `x[-49,-13] z[-439,-434]` | 222 | six-wide east/west logistics spine, labeled stores, no dead end |
| B2-04 | Dry, cold, and event stores | `x[-49,-31] z[-433,-409]` | 475 | dry racks, cold rooms, linen, furniture carts, separated returns |
| B2-05 | Plant, maintenance, and guild workshop | `x[-29,-13] z[-433,-409]` | 425 | tool crib, maintenance bench, waste hold, gas niche, cellar alarm |
| B2-06 | Founders' crypt gallery | west/core band | 180 target | cenotaphs, donor tablets, stair landing, quiet route to treasury |
| B2-07 | Concealed carriage/parking vault | below east service court; conceptual `x[-10,14] z[-451,-410]` | survey | eight 5×9 bays, seven-wide maneuvering aisle, guarded ramp, direct service-core lobby |

## B1 — social undercroft (`floor y60`, clear `y61..66`)

| ID | Room | Design zone | Approx. blocks | Function / required detail |
|---|---|---|---|---|
| B1-01 | Dance Hall | `x[-49,-13] z[-462,-441]` | 814 | 21×17 clear dance floor, 9×4 musicians' dais, balcony-look gallery, coat bay |
| B1-02 | Acoustic/service gallery | `x[-49,-13] z[-440,-434]` | 259 | two-door lobbies to both loud rooms; stair and toilet distribution |
| B1-03 | Gilded Ledger patron hall | `x[-49,-22] z[-433,-409]` | 700 | grand bar, booths, communal table, fireplace, founder statue, small performance niche |
| B1-04 | Bar finishing kitchen and wash | `x[-20,-13] z[-433,-409]` | 200 | cold prep, plating, three-sink/glasswash line, hand sink, clean and dirty doors |
| B1-05 | Sunken south garden | exterior `z[-405,-393]` | survey | second public exit, herb beds, fountain, terrace seating, lit retaining wall |

## Ground — ceremony and governance (`floor y67`, clear `y68..74`)

| ID | Room | Design zone | Approx. blocks | Function / required detail |
|---|---|---|---|---|
| G-01 | Garth portico and vestibule | `x[-62,-52] z[-445,-431]` | 165 | five-wide doors, donor floor mosaic, cloakroom, direct pavilion sightline |
| G-02 | Processional gallery | `x[-51,-13] z[-438,-433]` | 234 | heraldic sequence, stair landings, access to every public ground-floor room |
| G-03 | Great Hall | `x[-49,-13] z[-462,-440]` | 851 | 120 banquet / 144 theater target, dais, minstrels' gallery, hammer-beam roof reading |
| G-04 | Guild Court chamber | `x[-49,-35] z[-430,-409]` | 330 | Master/Wardens dais, horseshoe table, witness lectern, charter wall |
| G-05 | Grand banquet kitchen | `x[-33,-13] z[-430,-409]` | 462 | receiving→store→prep→cook→plate flow, separate dish return, hall servery |
| G-06 | West stair hall / public amenities | west core band | 250 target | two separated public stairs, toilets, coat room, quiet room |

## Second — performance and teaching (`floor y75`, clear `y76..82`)

| ID | Room | Design zone | Approx. blocks | Function / required detail |
|---|---|---|---|---|
| L2-01 | Guild Theater | `x[-49,-13] z[-462,-438]` | 925 | 84 seats, 17×7 screen, 17×6 stage, rear entries, accessible seating bays |
| L2-02 | Foyer / acoustic lock | `x[-49,-13] z[-437,-432]` | 222 | ticket/display bar, two-door theater entries, cross-building route |
| L2-03 | Lecture Hall | `x[-49,-29] z[-431,-409]` | 483 | 72 seats, explicit 13×6 screen, demonstration dais, rear entry |
| L2-04 | Demonstration kitchen | `x[-27,-13] z[-431,-409]` | 345 | instructor island, four learner stations, wash/hand sinks, lecture servery |
| L2-05 | Backstage / green room | east theater edge | 180 target | dressing, prop store, stage access, service-stair access |

## Third — residential guild floor (`floor y83`, clear `y84..90`)

| ID | Room | Design zone | Approx. blocks | Function / required detail |
|---|---|---|---|---|
| L3-01 | Dormitory wing | `x[-49,-13] z[-462,-440]` | 851 | eight 2-bed rooms, two warden rooms, linen, bathing suite, individual storage |
| L3-02 | Residential gallery | `x[-49,-13] z[-439,-434]` | 222 | daylit circulation, display cases, protected stair connections |
| L3-03 | Members' living salon | `x[-49,-31] z[-433,-409]` | 475 | fireplace, library wall, games tables, conversation bays |

DRAFT — NOT AS-BUILT

DRAFT — NOT AS-BUILT — LIVE CLOSEOUT GATES PENDING

| | | | | |
|---|---|---|---|---|
| L3-04 | Residential kitchen and dining | `x[-29,-13] z[-433,-409]` | 425 | 24-seat dining, domestic-scale prep, pantry, dish area |
| L3-05 | Founders' chapel / memorial room | tower/core bay | 120 target | stained crest, remembrance table, quiet seating; not a circulation shortcut |

### Roof

- Continuous inspection walk inside the roof volume.
- Minstrels' gallery and Great Hall clerestory, but no inaccessible decorative catwalk advertised as a route.
- Copper lantern over the Garth axis.
- Two roof terraces may be added only if each has a normal-walk stair, guard rails, drainage, and two-block-clear doors.

---

# 5. Four-kitchen contract

“Four kitchens” means four genuinely differentiated and usable rooms:

| Kitchen | Primary load | Required adjacency | Non-negotiable equipment/story |
|---|---|---|---|
| K1 Grand banquet | Great Hall and Court dinners | Great Hall servery, service dock, B2 stores | hot line, cold prep, pastry, plate pass, dish return, hand sink |
| K2 Bar finishing | bar and dance events | back bar, B2 cellar, acoustic gallery | cold prep, snack hot line, glasswash, three-sink line, clean-glass rack |
| K3 Demonstration | teaching and lectures | Lecture Hall, service stair | instructor island, four stations, screen sightline, separate wash |
| K4 Residential | dormitories and living salon | dining room, pantry | domestic hearth/range, communal island, pantry, dish storage |

The kitchen QA must prove:

- no patron route crosses the cook line;
- no dirty-dish return crosses the plating pass;
- every kitchen has a distinct hand-wash fixture;
- wet/service floors contain no carpet or raw porous decorative wall at working height;
- B2 storage reaches every kitchen by the east service stair without entering the Great Hall, bar guest zone, theater seating, or dorm bedrooms.

---

# 6. Circulation and core standard

## 6.1 Cores

Reserve before room detailing:

| Core | Hold | Role |
|---|---|---|
| North public stair | `x[-62,-53] z[-463,-450]` | Garth/Great Hall/theater/dorm route 1 |
| South public stair | `x[-62,-53] z[-420,-407]` | Garth/Court/bar/lecture/dorm route 2 |
| East service stair | `x[-21,-13] z[-463,-450]` | kitchens, backstage, cellar, deliveries |
| Central accessible lift analogue | `x[-20,-16] z[-447,-443]` | optional convenience only; never route acceptance |

All five occupied levels must connect to at least two remotely separated, bidirectional **normal-walk** stairs. The east service stair is a third route. No ladder, water elevator, elytra jump, trapdoor crawl, or fall is credited.

## 6.2 Width and headroom

- public processional gallery: 5 clear blocks;
- public corridors: 3 clear blocks;
- service gallery: 3 clear blocks, 4 at kitchen/delivery pinch points;
- stairs: 3 clear blocks between finished walls;
- doors serving assembly rooms: two independent 2-wide openings;
- stairs and corridors: 3 clear blocks of headroom at every traversed cell;
- landings: 5×5 clear at direction changes and assembly-room doors;
- no stair discharges through a kitchen, store, backstage room, bedroom, or behind the bar.

- Theater and Lecture Hall seating faces an **explicit, already-built screen**.
- Their public doors enter from the rear or side-rear. No principal entry is behind or through the screen wall.
- Theater seating rises one block after every two seat rows; accessible bays remain level at rear and intermediate entry levels.
- Dance Hall and bar share proximity, not an open aperture: two doors and a five-block acoustic/service lobby separate them.
- Dormitories are one full floor and two doors away from loud assembly rooms.

### 6.4 Loading, parking, and delivery logic

- Keep all public arrival in the Garth pedestrian. No exposed surface parking, delivery apron, refuse cage, or garage doors face the library/pavilion axis.
- Place a screened loading court on the Guild Hall east face, with a target dock zone centered near `z[-431,-421]`. A solid gatehouse wall, trees, and the service wing hide it from the west and south public approaches.
- Connect loading directly to K1, the east service stair, B2 event stores, and the waste hold. Deliveries must not cross the Great Hall, Court chamber, theater, bar guest room, or residential gallery.
- Hold an **eight-bay concealed carriage/parking vault** below the east service court. Planning bay: 5×9 clear blocks; central maneuvering aisle: seven clear blocks; headroom: four; protected pedestrian strip: two.
- The parking ramp approaches only from the east and descends no faster than one block per three horizontal blocks. Provide a 5×5 landing at both ends, a two-block parapet/retaining edge, continuous light, and a separate normal-walk pedestrian door to the service core.
- Keep the parking vault out of the bar/cask cellar and archive fire/service compartments. No parking bay becomes a shortcut into B1 patron rooms.
- Final parking/ramp coordinates are a survey decision. The conceptual hold extends east of the main building and cannot be engineered until the 16-block-plus expanded buffer is decoded.

This institutional parking logic does **not** revise the separate residential garage directive. Town houses remain a different package: garages are attached to their houses, never detached; large-house schedules use reviewed 4-car or 6-car attached bays. No residential garage is included in Guild Hall quantities.

---

## 7. Adjacency matrix

Legend: `3` direct opening; `2` next-door via a lobby/gallery; `1` same core, short route; `X` deliberately buffered; `–` self.

| | PAV | FOY | GRT | CRT | K1 | THR | LEC | DAN | BAR | K2 | DRM | K4 | SVC |

---

## 8. The Gilded Ledger — bar design source of truth

### 8.1 Concept

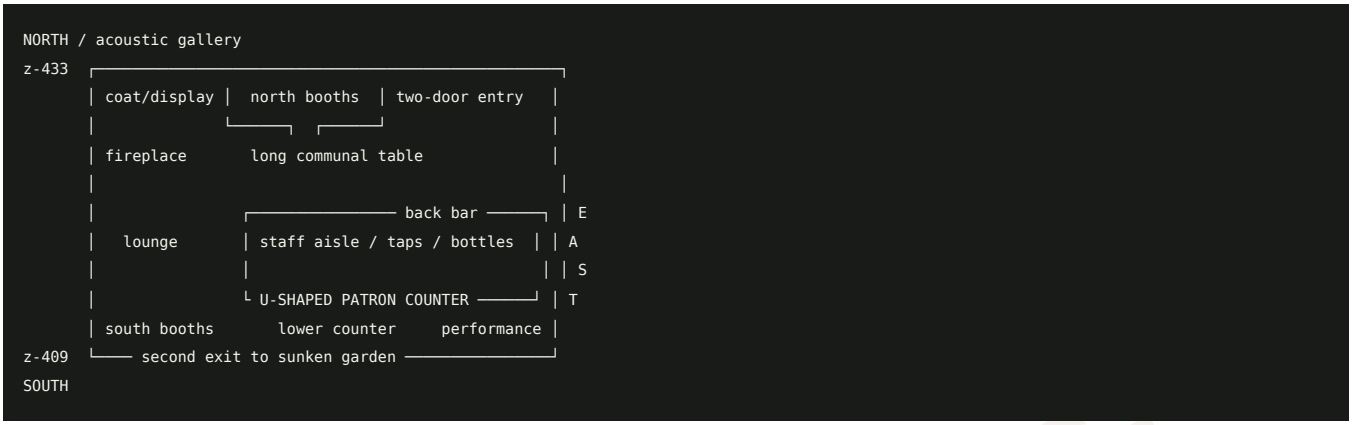
The Gilded Ledger is a guild undercroft, not a modern sports bar and not a medieval-tavern cliché. Its story is “trade made visible”:

- the long back bar reads as an illuminated cabinet of guild wealth;
- barrel-vault ribs carry carved trade marks;
- the central communal table resembles a counting-house table;

- donor names, charters, maps, casks, and tools are displayed in ordered bays;
- the bar has a working cellar, service circulation, glasswash, finishing kitchen, and staff stations;
- the palette is dark, warm, and expensive, with gold concentrated at bosses, lettering, and the founder figure.

## 8.2 Plan

Patron room: `x[-49,-22] z[-433,-409]`, floor `y60`.



Exact bar-fixture holds:

| Fixture | Hold | Build requirement |
|---|---|---|
| Long counter | `x[-29,-27] z[-429,-413]` | 3-deep, continuous foot rail, four staff stations |
| North return | `x[-40,-30] z[-429,-427]` | frames the communal table |
| South return | `x[-40,-30] z[-415,-413]` | contains 4-wide lower counter bay |
| Back bar | `x[-25,-21] z[-429,-413]` | three lit tiers, 24-tap rhythm, bottle grid, crest |
| Staff aisle | between counter and back bar | 2 clear blocks minimum, no trapdoor pinch |
| Communal table | `x[-44,-39] z[-425,-417]` | 6×9, 18 seats, chandelier above |
| Fireplace | west wall near `(-48,63,-421)` | 5-wide surround, screened fire, seating clear |
| Performance niche | southeast corner | 7×5 dais, note blocks/jukebox, no exit conflict |
| Accessible counter analogue | south return | 4-wide one-slab-lower surface, 5×5 approach court |
| Main entry | north wall | two 2-wide doors through acoustic lobby |
| Secondary exit | south wall | 2-wide door to lit sunken garden and public stair |

## 8.3 Bar elevations

**Back bar, patron view**

- plinth at `y61`, polished blackstone;
- counter top at `y62`, dark oak slab/trapdoor edge;
- first bottle/tap tier `y63..64`, amber glass and copper;
- second tier `y65`, carved dark oak grid;
- crest, clock, and founder arms centered at `y66`;
- no opaque wall of barrels; every third bay is a light, mirror, map, or crest.

**Room section**

- floor `y60`: polished blackstone border and dark-oak dry-zone field;
- spring `y63`: tuff-brick ribs every five blocks;
- vault crown `y66`: dark tuff with gilded bosses;
- chains descend only over tables/counter and never below 3-block headroom;
- service areas use smooth stone/andesite and contained floor-drain motifs.

**West fireplace elevation**

- 7-wide stone/tuff composition;
- 3-wide screened firebox;
- carved guild date band;
- two 5-block standing figures in flanking niches;

DRAFT · NOT AS-BUILT

## 8.4 Bar operations

The patron, clean-service, and dirty-return loops remain distinct:

```
B2 cask/cold store
  → east service stair
  → K2 receiving/cold hold
  → back-bar staff aisle
  → tap / service station
  → patron
  → separate glass return
  → scrape / wash / rinse
  → clean-glass rack
  → service station
```

Required service stations:

1. draught/beer;
2. wine/cask;
3. cocktails/non-alcoholic;
4. event/overflow.

Each has a sink/cauldron analogue, clean-glass storage, waste, light, and at least two blocks of staff standing room. The gas niche is sealed from patron space, marked, ventilated to the east service court, and represented by a low-level detector/alarm fixture. The beer-line chase must be short, continuous, inspectable, and never share the waste-return trench.

## 8.5 Bar material bill

Planning quantities include approximately 15% cutting/detail contingency. Final exact quantities come from the guarded generator.

| Material | Planning qty. | Role |
|---|---|---|
| Tuff bricks / stairs / slabs | 1,400 | vault, piers, wall fields |
| Stone bricks / variants | 900 | foundation, fireplace, service walls |
| Polished blackstone bricks / slabs | 1,050 | floor border, bar plinth, hearth |
| Gilded blackstone | 256 | bosses, capitals, letter band |
| Dark oak planks | 1,200 | floor, bar carcass, tables, paneling |
| Stripped dark oak logs | 320 | bay posts, ribs, door frames |
| Dark oak stairs/slabs/trapdoors | 950 | counter, shelving, booths, cornice |
| Waxed cut/exposed copper family | 520 | taps, rails, trim, service details |
| Amber/yellow/gray glass | 380 | bottle cabinets, mirror fields, screens |
| Froglights/shroomlights/sea lanterns | 128 | concealed back-bar and vault light |
| Lanterns / soul lantern accents | 160 | table, wall, route lighting |
| Chains | 220 | chandeliers, cask/display suspension |
| Barrels | 112 | cellar/display/service; no route obstruction |
| Chests / trapped chests | 32 | secured service stores |
| Item frames / glow item frames | 240 | bottles, tools, donor artifacts |
| Red/burgundy wool and carpet | 320 | dry patron zones and acoustic panels |
| Bookshelves / chiseled bookshelves | 180 | ledgers and guild records |
| Signs / hanging signs | 96 | room, cask, donor, route labeling |
| Candles | 192 | table and memorial accents |
| Brewing stands / cauldrons | 24 / 12 | working-service visual language |
| Note blocks / jukeboxes | 36 / 4 | performance niche |

DRAFT · NOT AS-BUILT

### 9. Whole-building planning material bill

Planning only, inclusive of 15% detail/cutting contingency:

| Family | Planning qty. |
|---|---|
| Stone-brick family | 14,000 |
| Tuff-brick family | 10,000 |
| Deepslate roof family | 7,200 |
| Dark-oak structural logs | 3,600 |
| Dark-oak plank/stair/slab family | 7,500 |
| Calcite/quartz dressings | 4,000 |
| Copper family | 3,000 |
| Glass panes/blocks | 2,400 |
| Brick/granite/mud-brick paving | 4,500 |
| Polished blackstone family | 3,800 |
| Gilded blackstone and gold accents | 1,100 |
| Wool/carpet/banner family | 3,200 |
| Bookshelves/chiseled shelves | 1,400 |
| Lantern/light family | 900 |
| Chains | 850 |
| Furnishing blocks and containers | 2,800 |

Rare blocks are accents. If substitution is required, preserve contrast and hierarchy before rarity.

---

# 10. Pavilion/Garth integration and statues

## 10.1 Direct connection

- Extend the active Garth paving to the Guild Hall west portico without erasing Ravensgate's route.
- Use a 13-wide processional threshold centered on `z[-444,-432]`.
- Keep a five-wide unobstructed path from library loggia to Guild Hall vestibule.
- Align the Guild Hall door head, paving band, and pavilion focal axis.
- Use a two-storey concrete/stone terrace only where the library team confirms its east walk-out; the Garth remains the shared outdoor room.
- No bridge may roof over the entire court. The buildings must remain visually separate wings joined by an open civic center.

## 10.2 Statue program

Four larger-than-life 7-block figures on 3×3 plinths:

| Figure | Suggested position | Attributes |
|---|---|---|
| Craft | northwest Garth | hammer, compass, dark-oak/tuff |
| Learning | southwest Garth | open book, lamp, calcite/copper |
| Fellowship | northeast Garth | linked hands/cup, stone/copper |
| Stewardship | southeast Garth | key/ledger, stone/gilded accent |

Guild Hall west façade adds two 9-block guardians representing the Master and the Builder. Great Hall receives smaller portrait busts, not another crowded statue forest.

Every statue must have:

- a documented name and story;
- a lit face;
- a full 3-block circulation apron;

- four-direction screenshot acceptance.

---

# 11. Build phases

## Phase 0 — survey and design freeze

1. Acquire new immutable Anvil snapshot.
2. Decode every column and occupied cell in the hold envelope plus a 16-block buffer.
3. Inventory trees, water, terrain, structures, containers, entities, current routes, protected features, and unknown player work.
4. Confirm the library/Garth/Guild Hall axis and final building/service-court boundaries.
5. Capture before images from fixed cameras.
6. Freeze coordinate schedule and publish collision report.

## Phase 1 — enabling and courtyard protection

- Mark protected Ravensgate path cells.
- Build temporary bypass before disturbing any route.
- Relocate only reviewed landscape objects with explicit inventory.
- Establish service access and construction boundary.
- Do not excavate while a player/entity is inside the release box.

## Phase 2 — undercrofts

- Excavate B2 and B1 in bounded slices.
- Install retaining walls, floor plates, drainage motifs, and both public stairs before fit-out.
- If the surveyed east site passes, build the concealed parking vault, guarded ramp, loading-core lobby, and sealed separation from archive/cellar in this phase.
- Prove rollback bijection after every slice.
- Keep water/gravity-block census at zero unresolved targets.

## Phase 3 — frame and weather shell

- Structural bays, all floors, exterior walls, stair towers, roof, glazing.
- Complete a watertight shell and continuous stairs before decorative work.
- Verify no exposed cave/exterior void at authored interiors.

## Phase 4 — Garth interface

- Portico, processional paving, loggia connection, terrace edges, statues, and wayfinding.
- Rerun the original Ravensgate bidirectional route and the new library↔hall route.

## Phase 5 — life-safety and service spine

- Finish two public stairs, service stair, five-wide spine, toilets, service gallery, loading court, all required room doors, and route lighting.
- No venue fit-out begins until all floors walk in both directions.

## Phase 6 — kitchens and logistics

- B2 stores, all four kitchens, dish return, clean pass, service stair, cellar, gas niche, and waste hold.
- Run patron/service/dirty-route isolation tests.

## Phase 7 — ceremonial and venue fit-out

- Great Hall, Court, theater, lecture hall, dance hall.
- Screens and stages precede seating.
- Validate every seat direction and every venue exit before ornament.

## Phase 8 — Gilded Ledger

- Vault, floor, bar and back bar, kitchen/wash, cellar system, booths, table, fireplace, performance niche, signage, lighting.
- Prove service loops and both exits before opening the room.

## Phase 9 — residential floor

- Dormitories, warden rooms, baths, living salon, residential kitchen/dining, chapel, storage, sound buffer.

DRAFT · NOT AS-BUILT

- Sunken garden, service-court screening, Garth restoration, final trees, paving, lighting, signs, route markers, screenshots, floor plans, object/media links, DB import package, and dossier update.

---

# 12. QA and acceptance

## 12.1 Exact-state release gates

- fresh immutable pre-snapshot hash recorded;
- every mutation exact-state guarded;
- forward/rollback one-cell bijection proven;
- `rcon_runner.py --strict-noop --report <json>` used for parser and physical release reporting;
- zero unknown-container or protected-feature overwrites;
- zero players/entities in the release box;
- zero unreviewed fluid, gravity, waterlogged, or foliage targets;
- atomic package order and failure rollback documented;
- immutable post-snapshot captured before publication claims.

## 12.2 Route acceptance

Required bidirectional normal-walk routes:

1. library public entry ↔ Garth ↔ Guild Hall vestibule;
2. Garth ↔ Great Hall dais;
3. Garth ↔ Court chamber;
4. Garth ↔ B1 bar main entrance;
5. bar main entrance ↔ south-garden exit;
6. Garth ↔ Dance Hall;
7. Garth ↔ Theater seating, stage, and backstage;
8. Garth ↔ Lecture Hall screen/dais;
9. Garth ↔ every dorm room and residential kitchen;
10. east delivery point ↔ B2 stores ↔ each of four kitchens;
11. concealed parking pedestrian lobby ↔ east service stair ↔ exterior;
12. every occupied floor ↔ north public stair ↔ exterior;
13. every occupied floor ↔ south public stair ↔ exterior;
14. every service floor ↔ east service stair ↔ exterior.

Acceptance:

- 28/28 route directions pass if concealed parking is released; 26/26 if the survey rejects parking and it is formally deferred;
- no ladder/fall/swim/crawl/tower/dig;
- 3-block headroom;
- no 1-block corridor pinch;
- no route through fire, counter, seat, chest, kitchen line, stage screen, or bedroom furniture;
- all doors are openable from both sides.

## 12.3 Room-completeness tests

- five levels plus roof service walk cataloged;
- every named room enclosed, lit, signed, furnished, and accessible;
- four kitchens are distinct and meet the contract;
- theater and lecture hall have visible screens before seating is accepted;
- dance floor has clear extents and no chandelier/headroom collision;
- dormitory target: 20 beds, 20 personal stores, two warden stations;
- Great Hall target: 120 banquet seats or 144 theater-layout positions without blocking exits;
- Gilded Ledger: four working service stations, 12 booth groups, communal table, fireplace, performance niche, lower counter, two exits, and service route;
- no room has a blank wall longer than 11 blocks unless articulated by panel, pier, opening, fireplace, art, or shelving.

## 12.4 Visual acceptance

Matched before/after cameras:

1. Garth west-to-east axis;
2. Guild Hall west façade;
3. north and south obliques;
4. roof/courtyard aerial;

DRAFT — NOT AS-BUILT

6. Court chamber;
7. Theater rear-to-screen and screen-to-seating;
8. Lecture Hall rear-to-screen;
9. Dance Hall;
10. bar entrance wide;
11. bar counter/back-bar elevation;
12. bar service/finishing kitchen;
13. B2 cellar/treasury;
14. dormitory gallery and sample room;
15. each kitchen;
16. each public stair and service stair;
17. Garth statues in four-direction context.

Screenshots must be object-linked in the media catalog; filenames alone are not evidence.

### 12.5 Decision hold points

Stop before engineering if:

- the east site collides with unknown/player-authored work;
- the final hall blocks the current Ravensgate route;
- the library expansion changes the shared Garth datum or axis;
- a fresh snapshot differs from the engineering baseline;
- the bar cannot receive two separated normal-walk exits;
- either B1/B2 intersects protected underground rooms or fluid boundaries;
- the footprint cannot keep at least a three-block landscape/service buffer.
- the concealed parking ramp cannot be graded at 1:3 or gentler without intersecting protected work, water, or a public route.

---

## 13. Engineer handoff

The engineer must produce, in order:

1. surveyed final coordinates and collision register;
2. floor-plan/elevation drawings;
3. immutable snapshot hash;
4. exact guarded forward and rollback operations;
5. exact material counts;
6. independent state/preflight/route QA;
7. before-camera report;
8. atomic execution ledger;
9. immutable post snapshot;
10. 26-direction route report;
11. after-camera report;
12. feature/room/route import package;
13. artifact register and PM dossier update.

No statement in this document authorizes a live build. It defines what a complete, reviewable, buildable Guild Hall package must contain.

DRAFT · NOT AS-BUILT

DRAFT — NOT AS-BUILT — LIVE CLOSEOUT GATES PENDING

# Independent Coordinated-Release Geometry and Safety Audit

**Audit state:** `BLOCKED_DO_NOT_RELEASE`
**Audit type:** offline/read-only; no generator or live-world mutation
**Generator audited:** `scripts/generate_town_expansion_r1.mjs`
**Captured generator SHA-256:** `37589d47df864163e1f54a6f689e9ef1b15dc324602c66f84d6b957fd39cdde3`
**Design snapshot:** `data/worldsnap-town-expansion-expanded-baseline-20260728T0405Z/region`
**Snapshot SHA-256:** `e612b1feabcf8bd81e427804e0c5cdccea5aac79ef543cadbf2b05d360de7a5a`

---

## Executive decision

The coordinated package is not safe to preflight or execute yet. The current generator does not complete, several newest scopes are not dispatched, and multiple planning schedules contradict the geometry actually modeled.

This is not a judgment on the overall master plan. The large-campus layout, deep Ravensgate exclusion, isolated library–Guild concept, owner estate, and three distinct Westlight venue identities are all viable design directions. The hold is caused by exact implementation defects that would otherwise create flood exposure, inaccessible rooms, misleading counts, incomplete C01 migration, or destructive cross-scope overwrites.

---

## Immediate blockers

1. **The generator crashes before writing a report.** At the captured source, generation reaches report construction and throws: `RangeError: Maximum call stack size exceeded` in `boundsOf()`. The cause is `Math.min(...cells.map(...))` / `Math.max(...)` over a multi-million-cell scope. Replace all six spread reductions with one iterative bounds reducer.
2. **The newest civic function is dead code.** `modelCivicPavilionEastGrounds()` is defined but is not called by `main()`. Therefore the pools, fountain, monument, east allée, secret tunnel and its rooms are absent from the generated model.
3. **There is no observatory-estate/portal-gallery model and no Westlight three-venue model.** The existing `modelPenthouse()` is the Ravensreach Moot Hall penthouse at negative coordinates; it does not satisfy the new observatory estate request.
4. **The report readiness rule is insufficient.** `READY_FOR_PREFLIGHT` currently depends only on zero protected block-entity targets. It does not fail on direct water/lava targets, cross-scope overwrites, missing requested scopes, impossible routes, stale design authority, or final-state count failures.

---

## Data-campus audit

### Direct hydrology conflicts

An exact temporary compile of the unchanged data/warehouse functions against the design snapshot found these source states inside current data-campus targets:

| Scope | Water | Bubble columns | Lava |
|---|---|---|---|
| `TE-IA-DATA-DM05` | 61 | 4 | 0 |
| `TE-IA-DATA-DM06` | 7 | 0 | 0 |
| `TE-IA-DATA-DM07` | 389 | 0 | 0 |
| `TE-IA-DATA-DM08` | 75 | 0 | 0 |
| `TE-IA-DATA-DM09` | 4 | 0 | 0 |
| `TE-IA-DATA-DM10` | 31 | 0 | 18 |
| `TE-IA-POWER-CAMPUS` | 0 | 0 | 22 |
| `TE-IA-OUTER-WAREHOUSE-A` | 99 | 0 | 0 |

The total is **666 direct water blocks, four bubble columns and 40 lava blocks**. The source of most conflicts is the blanket `model.box(..., 60, ..., baseY, ..., stone_bricks)` foundation strategy. A surface parcel with no top-water columns is not proof that every cell between `y60` and a `y90` slab is dry.

DRAFT — NOT AS-BUILT — LIVE CLOSEOUT GATES PENDING

competent layer, or shift the affected halls. A selected occupied prism must have zero direct fluid states and a reviewed neighbor fluid halo.

### Geometry and circulation defects

- `modelWarehouseRackRun()` hardcodes racks at `y51..59`. Both outer equipment warehouses have floors at `y75`, so their “computer gear” racks are underground, roughly 16–24 blocks below the buildings. Parameterize the rack floor and pass the warehouse floor elevation.
- The 40-row counter is a construction-loop counter, not a final-state proof. In each controlled-cage hall, the cage overwrites portions of four upper rack-row planes. Count surviving row identities after every override and require 40 walkable, visibly continuous row records per hall.
- Each data hall has one stair, despite the coordinate schedule requiring remote stairs and two transverse cross aisles per floor. Add a second remote protected stair and explicit row breaks/cross aisles.
- The staff lodge increments `lodgeBeds` once per 3-by-4 wool platform, has no room partitions, and has no stair or lift between its four floor plates. It is not a walkable 48-bed dormitory.
- The auditorium and cinema emit exactly 200 wool cells each, but have no center aisle, no integral accessible positions, and only block strips for risers. The “green room” and “projection/storage” additions are solid concrete volumes, not enterable rooms.
- The Info annex surface stair starts at approximately `(773,46,-498)` and ends near `(773,74,-442)`, while the DM10 threshold is near `z=-500`. Most of that stair leaves the declared access-core envelope (`z=-500..-476`), and its upper endpoint does not meet the DM10 door. Replace it with a contained switchback/shaft whose top and bottom landings touch their named thresholds.
- The annex partitions generated at `y46..51` extend above the annex roof at `y48`; the nominal `y45` floor consequently has only two clear blocks before the roof. Remove the unusable level or raise the proven dry envelope.

### Cross-scope defects

- The campus road overwrites **1,463 cells** of the power-yard boundary. It runs along and through the east fence without a designed gate.
- The road overwrites the southwest corner of DM03 rather than meeting its named entrance.
- The east-campus loop overwrites 70 cells of the venue back-of-house east wall.

**Required fix:** reserve exact gate/door openings first and treat any other road-to-building overwrite as a release failure.

---

## MainStreet underground warehouse audit

The newest warehouse feasibility schedule and the generator are not the same plan.

- The schedule rejects the broad west excavation and selects a dry high bay at `x32..88, y40..60, z200..296`.
- The generator still builds the earlier west hall at `x-112..-20, y50..61, z181..262`, then adds east pods at `y50..61`.
- The west-hall targets include 70 bubble columns, 362 kelp-plant cells, 312 seagrass cells, 252 tall-seagrass cells, 43 kelp cells, six magma blocks, 3,338 sand cells and 1,667 gravel cells. This is an aquatic column, not a dry high bay.
- All three “remote exit” boxes are too short for their stairs. For example, the NW shaft ends at `z181`, while its straight stair continues to about `z197`. The stair leaves its liner and enters raw ground.
- The generated vehicle ramp is the kind of wet approach the feasibility study explicitly rejects.
- The E2 pod lies only two blocks above the known source-water seam at `x114..117, y48, z232..233`; this violates the schedule's five-block review halo.
- The generated recovered pods stop around `z262`, while the later reservation extends the south wing to `z296`.

**Required fix:** select one warehouse authority. The defensible choice is the later dry-core schedule. Delete the wet west hall/ramp from this release, re-site the operational high bay to the proven dry prism, use contained switchback exits, keep `y62..64` untouched, and open each east wing only after its shell and fluid halo pass.

---

## C01 relocation and parking audit

### Conflicting source-of-truth schedules

Two incompatible decisions are present:

- `c01-east-relocation-coordinate-schedule.json` reserves a dry C01 rebuild at approximately `x700..900`, with the current generator using the northern `x797..888, y20..52, z-140..-85` module.
- `northeast-datacenter-c01-relocation-engineering.json` recommends the compact `x325..388, y0..45, z205..265` shell.

The generator combines the first C01 choice with warehouse geometry from the second artifact, while its data campus comes from a third, larger ten-hall schedule. Publish an explicit supersession record and retain only one coordinate authority per subsystem.

### Current C01 geometry defects

- The new main module is directly dry, but contains 2,175 gravity-sensitive cells. Staged support and neighbor-fluid checks remain mandatory.

DRAFT — NOT AS-BUILT — LIVE CLOSEOUT GATES PENDING

- **Sensitive cells**. Stop each pier at reviewed competent ground; never drive every twelfth pier blindly to `y40`.
- The west access and portal volumes are directly dry, but the main inner airlock door is placed at `z=-91`, outside the connector whose minimum is `z=-86`.
- The generated double doors never close the full corridor cross-section. Players can walk around the two door blocks inside the seven- to nine-wide passages. Add a full bulkhead wall with only the paired door openings, then place two separated bulkheads around a clear holding vestibule.
- The independent east egress is a reinforced-deepslate shaft rising to `y82`. It has no concealment landform and can visibly daylight, contradicting the zero-exposed-shell requirement.
- The module has 12 broad program rooms, not a demonstrated one-to-one recreation of all 36 C01 database objects and semantic routes.

### The old C01 is not actually moved

`modelFullParkingRecovery()` clears only the old C01 surface intrusion inside `x100..125, y71..100, z172..235`. It does not migrate and retire the full old C01 program. Both old and new complexes would remain.

The accepted source census contains 1,896 block entities, 12 non-empty inventories, 5,132 items and 36 database objects. These require a migration ledger and a commission-before-retire sequence. The owner observatory, penthouse, hangar, shelter and grand vault belong to the sibling `DIV-C01-SURFACE` tree even though they overlap the broad C01 envelope. Never decommission the old complex by clearing its bounding box; retire only object-owned C01 cells after independent estate support exists.

The parking surface itself hits only three known signs in the design snapshot, and the generator attempts to preserve them. That does not authorize parking completion before the old C01 subtree has been reconciled and retired.

---

## Westlight three-venue audit

No Westlight three-venue function is present in the generator. The waterfront work does not implement the Blue Drum entrance, Lantern Studio, backstage rooms, basements, dock, freight lift or service road.

The planning schedule also needs these corrections before implementation:

- The Blue Drum vertical core is bounded at `y40..70` but claims route levels `y40`, `y29` and `y18`. Either extend the protected core to `y18` or identify and prove the existing internal stairs used below `y40`.
- Lantern's audience floor and rear bar overlap at `x-408..-404, y35..39, z-557..-553`—125 program cells. Shrink the audience reserve to a true 40–60-seat arrangement with two aisles, or move the bar.
- The service spur still states that pile/causeway segments may be needed. It needs an exact width-buffer surface/fluid census before it can become operations.

The deep B1/B2 boxes, dungeon exclusions, dock parcel and fixed pier/crater separations are otherwise internally coherent at planning level.

---

## Pavilion east grounds and Ravensgate audit

The underground separation concept is sound: the restricted Ravensgate object ends at `y35`, its hard buffer ends at `y43`, and the civilian library–Guild tunnel is at `y58..64`. That leaves 14 untouched levels (`y44..57`) between the buffer and tunnel floor. Keep the restriction sealed; no Ravensgate entrance is authorized in this package.

The surface/tunnel implementation has four blockers:

1. The south reflecting pool at `x-58..-32, y66..70, z-417..-406` overlaps the actual Guild Hall, whose generated envelope/roof reaches `z=-408`. Shift the pool south into a newly surveyed reservation or rotate it to an east/west framing position.
2. Statues at `(-28,-456)` and `(-28,-428)` are inside the Guild Hall. Move them outside the actual `x-60..-6, z-463..-408` envelope.
3. The westward monument steps enter the Guild Hall around `x-10..-7, z-447..-440`. Turn the steps and accessible approach east or south.
4. The tunnel's three south rooms are sealed by their `z=-435` hollow walls; no doorway is cut from the main gallery. The endpoint doors are also placed along the gallery's south wall rather than across the west/east endpoint openings. Cut one controlled doorway per room, and build real closable endpoint vestibules in full cross-section.

The lawn exclusion should use the actual Guild Hall outer bounds `x-60..-6, z-463..-408`, not the smaller protected-interface rectangle.

---

## Observatory mega-estate and inactive portal gallery audit

No estate implementation exists yet. The planning schedule correctly calls for an independent podium before C01 retirement, but these exact conflicts remain:

- The full estate reservation at `x145..275, y75..150, z100..225` contains 1,058 current block entities in the design snapshot. Three are non-empty, with 1,292 items in total. The narrower support study's 784 count must not be mistaken for the whole-estate ledger.

DRAFT — NOT AS-BUILT

library" is in the east wing at `x255..270`. Move the celestial bookcase trigger into the proposed library or explicitly redesign and re-register the current safe room.

- The portal-gallery overall reservation includes `y75..76` at `x230..262, z184..190`, intersecting the existing grand-vault upper roof. Keep all portal construction at `y78+` there and add the vault roof as an exact no-target object.
- One existing sign at `(237,91,187)` requires an NBT disposition.
- Every offline destination needs a full-width two-door vestibule; two isolated door blocks in a wider corridor do not satisfy that requirement.
- Final acceptance must enumerate zero `nether_portal`, `end_portal`, `end_gateway` or activation mechanism cells.

---

# Required release order

1. Fix generator completion and make all requested scope dispatch explicit.
2. Freeze one authoritative coordinate schedule per subsystem.
3. Resolve every cross-scope collision listed above.
4. Rebuild data foundations and warehouse access around exact fluid/gravity censuses.
5. Build and commission the new C01 while the old C01 and owner estate remain untouched.
6. Build independent owner-estate support and reconcile all estate/C01 NBT.
7. Migrate C01 objects and inventory; then retire only owned old-C01 cells.
8. Complete P01 and the separately accepted dry warehouse wings.
9. Generate a fresh same-moment snapshot, exact forward/rollback operations, strict-noop preflight, entity clearance, post snapshot, route tests and matched media.

Until every failed gate in the companion matrix is closed, the release status must remain `BLOCKED_DO_NOT_RELEASE`.

DRAFT · NOT AS-BUILT

DRAFT — NOT AS-BUILT — LIVE CLOSEOUT GATES PENDING

# Iowa Data District — Full Build and Shared Worker Commons

**Status:** binding full-build design and release brief; physical/as-built status must be taken from the final guarded release and post-release verification
**Supersedes:** the planned/unbuilt Phase 0 envelope-only program in every respect
**Authorized scope:** twelve Meta-inspired halls, six Google-inspired halls, two LightEdge Solutions EdgeBCC-inspired buildings, their support facilities, roads, utilities, district power, complete fictional walkable interiors, and a shared naturalized worker commons
**Prepared:** 2026-07-28 UTC

The owner has authorized all three additional Iowa-inspired precincts for full construction in this release. They are no longer construction outlines for a future session. The shared worker commons is also a full-build target: a large drainage-informed pond, naturalized green space, a continuous walk/bike loop beginning in Concord, shelter houses, small park amenities, and an eighteen-hole disc-golf course.

This document deliberately separates three kinds of truth:

1. **Public precedent** is limited to facts and themes published by Meta, Google, LightEdge Solutions, government agencies, and the PDGA.
2. **Project design** is an original fictional Minecraft interpretation. Building positions, rooms, rack patterns, utilities, roads, trails, power infrastructure, landscape, and disc-golf routing do not represent real facilities.
3. **As-built truth** exists only after the guarded operation package is committed, the immutable post-release snapshot passes QA, every object is imported into the world catalog, and its matched after evidence is accepted.

The companion machine schedule is `iowa-data-district-full-build-coordinate-schedule.json`. Where that file and this narrative differ, the final independently audited generator report and post-release snapshot control physical truth.

---

# 1. Public-source research boundary

## 1.1 Meta Altoona precedent

Meta stated in May 2021 that two new Altoona buildings would bring the campus to ten buildings. Its December 2021 announcement added two more buildings and described more than five million square feet on completion. That supports a **twelve-building public planning precedent**. Meta also publicly describes energy efficiency, renewable-energy matching, water stewardship, construction waste diversion, and LEED certification across its owned data-center program.

Sources:

- Meta — May 2021 Altoona expansion
- Meta — December 2021 Altoona expansion
- Meta — data-center sustainability

Project translation: build twelve original compact Minecraft halls in three four-hall neighborhoods. Repeat a coherent architectural rhythm while giving each neighborhood a distinct color band, courtyard planting, and wayfinding identity. The project does not copy any real Altoona floor plan, perimeter, network, power entry, or access-control design.

## 1.2 Google Council Bluffs precedent

Google's official Iowa page dates its Council Bluffs investment to 2007 and records multiple later expansions. It does not publish a simple authoritative current building count. The project count of **six halls** is therefore an explicit fictional design choice, not a claim about Council Bluffs. Google's public gallery identifies such general program elements as a hub with offices, control and security rooms, cafeteria, gym, and yoga studio; a modular global central utilities building, or gCUB; outdoor staff seating; electrical yards; and visible server aisles.

Sources:

- Google Data Centers — Iowa
- Google Data Centers — public photo gallery

Project translation: build six original Minecraft halls in three paired courts, two fictional modular utility buildings, a visitor/operations hub, and a repair/staging building. The design may evoke Google's published use of color, staff commons, and modular support buildings. It must not reproduce real security, network, plant, or access geometry.

## 1.3 LightEdge Solutions EdgeBCC precedent

The correct name is **EdgeBCC**, not EdgeConneX. LightEdge's 2011 public release described an Altoona data-center expansion for colocation and private cage space and stated that an additional property option could support two similar facilities with four data-center spaces per facility.

DRAFT — NOT AS-BUILT

Project translation: build two original Minecraft data-center/business- continuity buildings. Each building has four legible fictional quadrants, walkable colo aisles, a shared central circulation cross, and support spaces. The two-building/four-quadrant composition is a public-inspired architectural story, not an audit or replica of the real site.

### 1.4 Water, landscape, path, and recreation precedent

Iowa DNR explains that development adds impervious area and runoff and that stormwater planning should combine water-quality, infiltration, channel protection, and conventional drainage practices. Its stormwater manual includes wet ponds, constructed wetlands, swales, soil restoration, native landscaping, and natural-resource inventory. That guidance supports preserving surveyed drainage and shaping a pond with planted transition zones instead of flattening the district into one grass slab.

Sources:

- Iowa DNR — stormwater overview
- Iowa DNR — Iowa Stormwater Management Manual
- Iowa DNR — native landscaping guidance

FHWA describes shared-use paths as low-stress, two-way facilities separated from motor traffic and serving people walking, cycling, rolling, jogging, and using mobility devices. It emphasizes firm and stable surfaces, accessible grades, and careful treatment where paths meet roads. The Access Board requires continuous unobstructed connections among arrival points, trailheads, and provided accessible features in the outdoor contexts covered by its guidance.

Sources:

- FHWA — greenways and shared-use paths
- U.S. Access Board — outdoor developed areas
- U.S. Access Board — accessible trails and shared-use paths

The PDGA's public course-development goals call for visibility of players and other users, a balanced range of hole lengths and shot shapes, effective use of elevation and foliage, and erosion protection. The PDGA recommends experienced professional design for real courses. This Minecraft course is a fictional recreational model and is not PDGA-certified.

Sources:

- PDGA — course design and development
- PDGA — course design resources
- PDGA — par guidelines

DRAFT · NOT AS-BUILT

---

# 2. District master plan

### 2.1 Spatial hierarchy

The district must read in this order while approaching from Concord:

1. the Concord trailhead and worker-arrival porch;
2. a naturalized transition from town to campus;
3. the shared pond and worker commons as the district's visual center;
4. the three distinct campus identities around the commons;
5. service roads and fenced power infrastructure beyond the public realm; and
6. a protected utility/future-growth edge.

The pond, trees, paths, shelter roofs, campus courts, and changing terrain must break the long views. A player should never see an uninterrupted field of flat grass filled only with rectangular buildings.

### 2.2 Full-build counts

| Precinct | Data buildings | Support buildings | Required interior identity |
|---|---|---|---|
| Meta Altoona-inspired | 12 | 2 or more shared support objects | repeating hall spine, walkable rack aisles, electrical/mechanical gallery, staff room, color-coded four-hall neighborhood |
| Google Iowa-inspired | 6 | 4 | paired hall courts, visible aisle rhythm, two modular utility buildings, visitor/operations hub, repair/staging |
| LightEdge EdgeBCC-inspired | 2 | 2 | four quadrants per building, colo/cage rhythm, central cross-corridor, recovery/admin and service support |
| Shared district | 0 | pond, shelters, trailhead, park, power and maintenance objects | public worker commons, continuous nonmotorized loop, landscape and recreation |

does not count.

### 2.3 Common interior minimum

Every data building must include, at Minecraft scale:

- an identifiable staffed entrance or service vestibule;
- a continuous walkable route from a door to the far end and back;
- individually legible rack or cage rows with clear aisles;
- visible overhead or edge utility language;
- a cooling/electrical/service zone that is visually distinct from white space;
- at least one staff support or maintenance room;
- emergency/secondary egress language where the footprint permits it;
- interior lighting sufficient for screenshots without night-vision effects;
- no one-block pinch point on the primary route;
- no decorative block occupying the player's head or foot volume; and
- two matched camera candidates: exterior identity and interior depth.

These are presentation rules, not a real operational specification. No hall may be advertised as a reproduction of a company's real infrastructure.

---

## 3. Precinct programs

### 3.1 Meta — twelve-hall field

The three four-hall groups are `META-N1`, `META-N2`, and `META-N3`. Each group uses the same basic building family, then changes color band, planting palette, and courtyard furniture. The repetition should make the campus comprehensible; the differences should keep it from looking copied and pasted.

Each hall must contain:

- a front vestibule and hall marker;
- a long primary aisle;
- paired rack fields separated by transverse clear paths;
- one visible mechanical/electrical gallery;
- a compact tool/store room;
- a two-zone staff break and briefing nook; and
- an independently visible rear/service exit.

The shared Meta support program includes an operations/training pavilion, materials-recovery/service yard, shaded courtyard tables, bicycle parking, and a direct path gate into the worker commons.

### 3.2 Google — six-hall paired courts

The three pairs are `GOOGLE-P1`, `GOOGLE-P2`, and `GOOGLE-P3`. Each pair faces a small planted court and shares a support connection without becoming one giant blank façade.

Each hall must contain:

- a colored arrival threshold;
- a main aisle with multiple visible rack rows;
- a front-of-room cooling/utility analogue;
- a narrow maintenance gallery;
- a staff workroom and recovery nook; and
- a clear second way out.

The public-inspired but fictional support objects are:

- two modular utility buildings;
- one visitor/operations hub with reception, control-room analogue, offices, cafeteria, gym/yoga room, lockers, and shaded outdoor seating; and
- one repair/staging shop with truck court, parts racks, work bays, and a staff desk.

The visitor hub is the public connection to the shared worker commons. No path through a data hall is required to reach the pond or park.

### 3.3 LightEdge Solutions EdgeBCC — two four-quadrant buildings

`EDGEBCC-A` and `EDGEBCC-B` are broader than the hyperscale halls. Each has:

DRAFT · NOT AS-BUILT

- a central north-south/east-west circulation cross;
- walkable rack or cage rows in every quadrant;
- a NOC/support room analogue;
- customer staging and crash-work area;
- utility/support rooms at the service edge; and
- a clearly separate main entrance and service entrance.

The shared recovery/admin building contains reception, training, conference, open work tables, kitchen, dining/break area, quiet room, showers/lockers, and two small recovery-work suites. A separate service court holds repair and delivery details.

---

# 4. Shared worker commons

## 4.1 The pond is infrastructure and public space

The central pond is formed around the surveyed drainage/water feature, not dropped onto an arbitrary flat pad. The final generator must record every pre-existing fluid column and its disposition. The full-build landscape may expand the water body, but it must do so through a reviewed, bounded shoreline package with exact rollback.

Required pond composition:

- an irregular shoreline with at least three visible concave bays;
- a planted shallow/wetland shelf represented with non-obstructing material;
- at least two high-bank overlooks and one low-bank viewing deck;
- a maintenance forebay/weir expression kept outside the main public lawn;
- a bridge or boardwalk only where it improves route continuity;
- a no-throw shoreline sector where disc flight could otherwise cross water or a busy path;
- dark and light planting bands that read as wet, wet-mesic, mesic, and upland zones; and
- enough clear water to be a district landmark from Meta, Google, and EdgeBCC.

The pond is a fictional Minecraft stormwater landscape. The release must not claim real detention volume, water-quality performance, dam engineering, or regulatory approval.

## 4.2 Naturalized terrain and planting

Landscape is modeled as clustered ecology, not decoration sprinkled on a slab.

- Preserve terrain movement and use shallow terraces only where buildings or accessible routes require them.
- Blend every cut/fill edge with two or more planted steps.
- Use asymmetric tree groves, small understory groups, prairie bands, and open lawns in deliberate proportions.
- Keep major building entrances and path intersections visible.
- Keep roots/trunks out of required path clear width, doors, utility yards, transmission corridors, and disc-golf throw lanes.
- Use taller/denser trees to screen service yards and longer blank elevations.
- Use lower planting at the pond edge and trail crossings.
- Vary grove density so the course offers open, wooded-edge, and tunnel shots without blind throws.
- Record every tree cluster as an object group with bounds and a camera candidate. Random unreported tree placement fails the object-evidence rule.

No campus landscape passes if an atlas view still reads as a flat grass sheet with isolated boxes.

## 4.3 Continuous Concord walk/bike loop

The Concord trailhead is the zero point. From it, a continuous off-road route must reach and loop all three campus precincts, the pond, the park, every shelter house, and the disc-golf start/finish area before returning to Concord.

Minecraft route standard:

- three clear blocks minimum throughout the compact model;
- firm, visually consistent surface;
- no jumps;
- no ladders;
- headroom of at least three blocks;
- terrain-following grades with broad landings where the route changes level;
- protected separation from motor roads or an unmistakable controlled crossing;
- widened passing/rest nodes at the trailhead, shelters, pond overlooks, and campus gates;
- shore-side railing or planted buffer where a direct fall into water is possible;
- lighting at intersections and gathering points, with darker habitat edges left deliberate; and
- a route graph that passes in both directions with the normal walking client.

DRAFT · NOT AS-BUILT

obstruction count, jumps, minimum clear width, grade transitions, and every road crossing.

### 4.4 Trailhead, park, and shelter houses

The Concord trailhead must contain:

- a visible gateway/map object;
- bicycle racks;
- drinking fountain analogue;
- repair stand;
- seating with adjacent companion spaces;
- waste/recycling point;
- a roofed information kiosk;
- lighting and a district-emergency marker; and
- direct, step-free connection to Concord's public path.

Provide at least four shelter houses:

1. Concord Trailhead Shelter — information, rest, and bike-repair focus;
2. Pond Commons Shelter — tables, grills, water view, and broad gathering lawn;
3. North Prairie Shelter — quieter staff lunch and bird/prairie overlook; and
4. EdgeBCC Grove Shelter — small-team outdoor work and recovery focus.

At each shelter, the primary route reaches a level floor; seating/table groups leave a clear companion position; grills or fire features are offset from roof supports and vegetation; and disc fairways do not cross the occupied floor.

The park program also includes an open event lawn, a small nature-play area, a fitness/stretch node, two pond overlooks, benches at sensible intervals, and informal outdoor work tables with shade.

---

## 5. Eighteen-hole disc-golf course

### 5.1 Course identity

The fictional course is **Three Campuses Disc Golf**. It begins and ends beside the Concord trailhead and uses the worker commons, prairie edges, pond views, campus groves, and terrain changes. It is a staff amenity shared by all three campuses, not a separate fenced attraction.

Required composition:

- exactly eighteen numbered tees;
- exactly eighteen numbered baskets;
- exactly eighteen tee signs;
- a start map and finish marker at Concord;
- a balanced mix of straight, left-finishing, right-finishing, uphill, downhill, open, wooded-edge, and water-view holes;
- a reviewed par for every hole and published total par;
- explicit tee-to-basket and basket-to-next-tee routing;
- no intended flight over a building, vehicle road, shelter floor, playground, occupied terrace, trailhead, power yard, transmission corridor, or blind path crossing; and
- no hole accepted solely because its objects fit. The entire flight corridor and the walk to the next tee must pass collision and visibility review.

The exact hole schedule, tee/basket positions, pars, centerline waypoints, camera IDs, and safety fields live in the companion JSON. Course lengths are Minecraft blocks and are not represented as real-world feet or meters.

### 5.2 Safety and circulation controls

- Tees point away from the busiest commons features.
- Where a fairway approaches the general trail, the basket is placed before the conflict and the next-tee route crosses at a visible right angle.
- Pond-edge holes are water-view holes, not forced water carries.
- Trees shape shots but do not create a blind landing zone.
- Tee signs identify hole, par, block length, intended line, next tee, and no-throw sector.
- Baskets remain visible from their tees or from a clearly identified dogleg turn.
- Each hole has a minimum camera pair: tee view and reverse basket view.
- Final visual QA must be done once with landscape complete, then repeated after defects are corrected.

## 6. Roads, utilities, and power

The full campus build retains the substantial shared power system authorized for Phase 0, but the status changes from reservations to completed fictional site infrastructure.

Required district power objects:

- one shared switching yard;
- two visually independent transmission corridors;
- one completed substation yard for each of Meta, Google, and EdgeBCC;
- transformer-bank and buswork analogues with maintenance clearances;
- protected service/firebreak lanes;
- an energy-operations building;
- future storage/operations pads that remain visibly reserved;
- planted screening from public paths without hiding every landmark; and
- continuing utility capacity at the district edge.

Required campus roads:

- exact connection to the existing east campus loop;
- public/spine road continuity past Concord and the commons;
- a complete service loop or service court for each campus;
- separated public and service approaches at Google;
- legible delivery access for all support buildings;
- no road that stops in grass without a defined turnaround, gate, or future stub; and
- no path crossing at a truck bay, transformer gate, or blind bend.

All equipment, routes, capacities, and control systems are fictional visual analogues. No real voltage, protection scheme, line route, operational detail, or security arrangement is asserted.

---

# 7. Object, database, map, and evidence contract

Every modeled feature needs a stable object ID before release. At minimum the database/import package must include:

- twenty data-building objects;
- every support building;
- three campus precinct objects;
- every power-yard and major utility object;
- the pond and each landscape zone;
- the continuous trail loop and each route segment;
- the trailhead, four shelters, and park amenities;
- all eighteen tees, baskets, signs, and hole corridors;
- material tree/grove groups;
- roads, bridges/boardwalks, overlooks, and controlled crossings; and
- one district-level aggregate object.

Each object record contains:

- `objectId`, name, precinct, class, and release scope;
- exact inclusive bounds or exact route nodes;
- planned/compiled/released/verified/publication status;
- public-precedent notes and a fictional-design disclaimer;
- generator/report scope and role;
- camera IDs;
- before, first-pass after, defect, correction, and second-pass media links;
- post-release block/material summary;
- route and accessibility checks where applicable;
- database import status and resulting feature ID; and
- map layer and Sites page assignment.

Publication must not infer a relationship merely because an image is nearby. Screenshots are linked to objects through the reviewed schedule and camera manifest.

---

# 8. Matched visual set

Minimum capture set:

DRAFT - NOT AS-BUILT

- one additional interior/program view for every support building;
- campus-wide overview for Meta, Google, and EdgeBCC;
- pond overview from two opposite banks;
- Concord-to-commons arrival sequence;
- full trailhead, each shelter, park lawn, play/fitness node, and both overlooks;
- tee and reverse-basket view for every disc-golf hole;
- power system overview plus each substation;
- road/path controlled crossings;
- landscape overview from all four district quadrants; and
- a large map frame that shows Concord, all three campuses, the complete loop, pond, disc-golf routing, roads, and power.

The first pass is diagnostic. Defects are recorded by object ID, corrected, and recaptured from the same camera. Only the second-pass accepted set may be marked `PUBLICATION_APPROVED`.

---

# 9. Release and second-pass acceptance gates

## 9.1 Compilation

- the generator completes without a missing snapshot column;
- every old Phase 0 scope is explicitly superseded or renamed as full build;
- completed hall counts are Meta 12, Google 6, EdgeBCC 2, total 20;
- every hall is roofed, lit, entered, traversable, and visibly fitted out;
- every support building in the machine schedule exists;
- exact rollback covers every changed cell;
- no protected block entity or live entity is targeted;
- no unauthorized cross-scope override remains;
- every introduced water cell belongs to the reviewed pond scope; and
- no active lava or bubble column is introduced.

## 9.2 Landscape and commons

- the pond occupies the surveyed drainage landscape and has an irregular, planted, walkable edge;
- tree and planting groups materially screen and articulate the district;
- atlas review does not read as flat grass plus boxes;
- all cuts/fills are blended;
- the Concord loop reaches every campus and returns continuously;
- route QA passes in both directions without jumps;
- four shelter houses and all required park amenities are present;
- all eighteen disc-golf holes have tee, sign, basket, safe flight corridor, next-tee route, and evidence; and
- no disc corridor conflicts with buildings, roads, shelters, play areas, paths, or power infrastructure.

## 9.3 As-built and publication

- guarded live release uses strict-noop reporting;
- immutable pre/post snapshots and a transaction ledger exist;
- post-state block verification passes;
- all objects are imported into the database;
- district and object maps regenerate from the accepted post snapshot;
- the full first-pass evidence set is reviewed;
- defects are corrected through a separate guarded package;
- all required same-camera second-pass images are accepted;
- the documentation, master PDF, README, Box mirror, and Sites payload are regenerated from the same accepted artifact set; and
- the production Sites URL returns successfully with no Error 1101.

Until every gate in section 9.3 passes, the correct external status is `FULL BUILD AUTHORIZED / COMPILED OR RELEASE IN PROGRESS`, never `AS BUILT`.

DRAFT · NOT AS-BUILT

DRAFT — NOT AS-BUILT — LIVE CLOSEOUT GATES PENDING

# GrandStreet America attached-garage engineering basis

Date: 2026-07-28 UTC
Package: `ATTACHED-RESIDENTIAL-GARAGES`
State: **coordinate basis complete; guarded physical release not yet generated**

## Decision

The owner's correction is controlling: every residential garage must be attached. The accepted R1 7×7 garage pavilions are real as-built history, but they are no longer acceptable current design.

The measured capacity schedule is:

| Class | Houses | Basis |
|---|---|---|
| Six-car | `H01`, `H07` | 6,011 and 5,979 verified square feet |
| Four-car | `H03`, `H08`, `H09`, `H10` | 3,223–4,138 verified square feet |
| Two-car | `H02`, `H04`, `H05`, `H06`, `H11`, `H12`, `C02`–`C07` | below 3,000 square feet or unverified cottage-scale C-series villa |

The large-house garage counts are not labels applied to small rooms. A four-car garage has four independent single-depth clear bays and four three-wide portals. A six-car garage has six independent clear bays and six three-wide portals. Tandem stacking is not used to inflate capacity.

The exact coordinate schedule is `mainstreet-attached-garage-engineering-schedule.json`.

## Survey provenance

The schedule was checked against the immutable 03:15 UTC town-expansion snapshot:

`data/worldsnap-town-expansion-complete-baseline-20260728T0315Z/region`

Its nine-region aggregate SHA-256 is:

`0bb1faa61ca69724816afe682080e3a517fa974ec1300c3651e399ea03505501`

The database was opened read-only. It contains eighteen complete detached garage features, `R4-GAR-H01` through `R4-GAR-H12` and `R4-GAR-C02` through `R4-GAR-C07`. No live-world or database writes were made during this survey.

The complete proposed shell-and-attachment census found:

- 18 residential parents;
- 18 attached replacement or absorption envelopes;
- zero block entities in any proposed envelope;
- zero water or lava cells in any proposed envelope;
- zero exact road-surface overlaps after resolving the width-three alley centerlines rather than relying on their broad database bounding boxes; and
- zero principal-front-door changes.

The broad database bounds for both alleys overlap several garage bounding boxes on paper. That is a false positive. The exact point-and-width check is the controlling collision test. In particular, the H08, H09 and H12 outer faces were pulled inward so none occupies a shifted `ALLEY-E` cell.

## Attachment strategy by row

### West H row

`H01`–`H06` keep their east-facing Main Street entrances and use the existing west garage door line. Their new shells grow from the old pavilion toward the house until the garage and house are face-adjacent. The only house-shell change is the enumerated three-wide mudroom threshold.

This keeps the existing `ALLEY-W` grades and aprons, reuses most R1 garage material, and avoids placing garage doors in the front gardens.

DRAFT · NOT AS-BUILT

- `H02`, `H04` and `H05` open at kitchen/dining service edges.
- `H03` opens through a great-hall service vestibule, away from the front door.
- `H06` opens at the formal-dining service edge beside the center hall.

### East H row

`H10`–`H12` use the same direct rear expansion toward their parent walls. `H08` and `H09` retain their existing high vehicle grades but convert the vertical difference into full occupied attached stair/mudroom wings.

`H07` cannot simply stretch its current pavilion toward the house: that would either occupy the `ALLEY-E` terminal or create an oversized token connector. Its six-bay motor house instead runs along the north house wall at floor Y72. A full enclosed three-rise core lands on the Y69 gallery/great-room level. The old pavilion shell is dismantled; its slab becomes an explicitly non-garage motor-court/charging overlook.

`H08` receives a four-bay Y71 garage with an enclosed stair serving both the Y64 kitchen edge and Y69 level. `H09` receives a four-bay Y77 hillside motor gallery with a full-height occupied stair wing to the Y64 kitchen edge. That wing is part of the building envelope from foundation to garage; a decorative bridge or one-block neck would fail.

### C-series villas

The six C-series houses remain smaller two-car programs, but every one becomes attached.

- `C04`, `C06` and `C07` connect at Y64.
- `C02` uses the measured R02 grade at Y69 and an enclosed five-rise stair. It moves north of its parent specifically to avoid `R05`; the earlier south concept crossed Garden Cross and is rejected.
- `C03` and `C05` retain their Y78/Y79 R03 vehicle grades. Their garage shells absorb the useful R1 material and include full-height switchback stair wings down to Y64.

The high east-villa stairs are a deliberate response to measured terrain, not a claim that a flat driveway exists. They require authored sections and normal-walk simulation before operations can be released.

---

## Old-pavilion disposition

Fifteen current feature IDs represent the same garage object expanded into its parent and should be updated in place only after QA:

`R4-GAR-H01`–`H06`, `R4-GAR-H08`–`H12`, `R4-GAR-C03`–`C05`, and `R4-GAR-C07`.

Three replacements are materially relocated. Their old features should be marked `removed`, retain prior geometry/evidence, and point to a successor:

| Old feature | Successor | Old-site reuse |
|---|---|---|
| `R4-GAR-H07` | `R6-ATT-GAR-H07` | motor-court/charging overlook |
| `R4-GAR-C02` | `R6-ATT-GAR-C02` | R02/R05 bicycle and rain-garden lay-by |
| `R4-GAR-C06` | `R6-ATT-GAR-C06` | visitor lay-by and bioswale |

No old structure may remain named or visually legible as a detached residential garage. Clean stone brick, polished andesite, quartz and dark-oak material should be reclaimed into the new shells; landscape conversions must receive distinct non-garage feature identities.

---

## Collision and room protection

The garage shells do not modify principal façades. The enumerated attachment cores are the complete permitted house-intersection list. The generator must fail if it targets:

- a furnishing or any block entity;
- a front door, portico, stoop or principal walk;
- an accepted stair;
- a floor plate outside the connector core;
- an exact alley, road or cross-street surface cell;
- fluid, gravity-sensitive or waterlogged neighbor cells without a reviewed treatment; or
- any cell outside the immutable-snapshot guard set.

The snapshot census is necessary but not sufficient. A same-moment snapshot must repeat the zero-block-entity, zero-fluid and road-width checks before live execution.

DRAFT - NOT AS-BUILT

## Physical release contract

The next implementation stage must:

1. compile the schedule into exact one-cell `REPL` operations and an exact reverse rollback;
2. preserve operation ordering for plants, connected blocks and support-dependent blocks;
3. preflight every source state against the same-moment snapshot;
4. run forward and rollback parser checks with `--strict-noop`;
5. clear players and fleet entities from every operation envelope;
6. apply retirement, absorption, shell, connector, apron and wayfinding cells as one coordinated transaction;
7. verify four or six visible bays where assigned;
8. normal-walk both directions from each house interior through its garage to the serving road;
9. take matching exterior, portal, bay, threshold and route screenshots for every residence; and
10. only then update the database, catalog, atlas, dossier, Sites source and Box handoff.

The database update must preserve prior geometry and R1 evidence, record capacity and portal count, and never leave both an old detached record and a new attached record current for the same physical garage.

---

# Release decision

**GO for guarded generator engineering. NO-GO for live mutation from this document alone.**

This memo resolves the owner’s attached-garage correction at measured coordinate and database-contract level. It does not claim that the physical retrofit has been executed.

DRAFT · NOT AS-BUILT

DRAFT — NOT AS-BUILT — LIVE CLOSEOUT GATES PENDING

# MainStreet Guest Services, Work Club and Roof House

## Independent survey and design review

**Artifact:** `MSA-B01-GUEST-SERVICES-ROOFTOP-WELLNESS-DR-2026-07-28`
**Decision:** design review complete; structural and water hold; no live release authorized
**Survey time:** 2026-07-28T04:25:44Z

This memo turns the current `B01` Guest & Design Center into a precise, reviewable proposal for a much more useful Guest Services building: visitor orientation, coworking, food and social space, upper patios and gardens, a controlled adult wellness floor, a hot-tub lounge, and a rooftop pool and bar. It also resolves the planned employee-lounge connection as a coordinated dependency.

The proposal is intentionally ambitious, but the survey found one decisive constraint: the current building has a complete roof slab and a complete foundation plate, yet **all 420 continuous foundation-to-roof columns are on the perimeter and there are zero continuous interior columns**. Two new occupied stories and a rooftop pool therefore cannot be treated as decorative fitout. A separately generated, independently checked support transaction must pass before any upper occupancy or water is authorized.

The private adult areas are tasteful and non-graphic. The proposal uses access control, privacy vestibules, acoustic separation, a red/dark material palette, bed/lounge furniture, concealed storage, decorative swing or hammock frames, wash/cleanup support and screened circulation. It does not prescribe explicit imagery or graphic details.

## 1. Immutable source and scope

The review read only:

- `data/worldsnap-town-expansion-complete-baseline-20260728T0315Z/region` — SHA-256 `0bb1faa61ca69724816afe682080e3a517fa974ec1300c3651e399ea03505501`, 9 Anvil region files, 59,287,653 bytes; and
- `data/world-map.db` — SHA-256 `1bd71512b9246b67b25a7fff91cd0745eb47d089e66fa15ee7ab23a41b21a503`, 2,547,712 bytes, opened read-only.

No Minecraft connection, RCON command, database write, world edit or service restart was made.

The machine-readable coordinate contract is `mainstreet-guest-services-rooftop-wellness-design-review.json` beside this memo.

## 2. Exact database identity

The selected feature is:

| Field | Value |
|---|---|
| Database ID | `wft_c95d5ccedf49cb25` |
| Project / external ID | `mainstreet-america` / `B01` |
| Name | Guest & Design Center |
| Kind / status | building / complete |
| Exact database bounds | x `-72..72`, y `63..80`, z `90..165` |
| Completion / condition | 1.0 / 100 |
| Source | `mainstreet-america/qa/audit-final-2026-07-26.json` |

The feature has no direct child-room records in the current database. The expanded design should eventually import separate child features for every floor, vertical core, pool, wet plant, employee connection and controlled adult zone. It must not overwrite the accepted B01 record before the post-state reconciliation succeeds.

The review envelope also intersects broad records for the Arrival and Visitor Campus, its white picket boundary, Main Street and the removed historic campus fence. The `RR-T2b` South Personnel Tunnel has a two-dimensional database overlap, but its known route is far below the B01 work envelope. A same-moment release survey must still prove vertical separation rather than relying on the 2D index.

## 3. What is actually there

### 3.1 Foundation and floors

Every one of the 11,020 footprint columns is solid at y62, y63 and y64:

| Layer | Condition |
|---|---|
| y62 | 11,020/11,020 `stone_bricks` |
| y63 | 11,020 solid: 9,728 stone brick, 836 gray concrete, 304 smooth stone, 152 yellow concrete |
| y64 | 11,020 solid; mixed finished floors led by smooth quartz, dark oak, oak, light-gray concrete, white concrete and polished andesite |

The current first floor is clear/fitted at y65..69. The second-floor slab is y70: 9,544 solid cells and a 1,476-cell central void. The clear second-floor volume is y71..75. That void is a real part of the building's spatial organization and should become an atrium with controlled bridges, not be blindly filled.

### 3.2 Roof

The current roof condition is unusually clean:

- y76 is a complete 11,020-cell `smooth_stone` slab;
- y77 contains only 145 `smooth_quartz_slab` cells;
- every cell from y78 through y110 is air within the B01 footprint;
- there are no fluid states from y63 through y110; and
- there are no gravity blocks from y62 through y110.

This is a dry, complete geometric platform. It is **not** proof that the platform can carry two occupied levels, gardens, a pool and public assembly loads.

### 3.3 Support finding

The snapshot contains 420 columns that remain solid from y62 through y76. Every one is on the perimeter. There are **zero** continuous interior columns.

That result changes the release strategy:

1. reserve and test an internal support grid;
2. build exact vertical cores and load paths as their own reversible release;
3. prove them against a post snapshot;
4. only then add dry upper shells;
5. fit out dry rooms;
6. construct empty basins; and
7. place water last.

### 3.4 Existing circulation

The only vertical stair observed above the first floor is a five-block run:

`(-24,65,109) → (-24,66,110) → (-24,67,111) → (-24,68,112) → (-24,69,113)`.

There are no ladders. The only exterior door set found in the building census is the south double door at x `-1..0`, y `65..66`, z `165`.

That is not an adequate circulation concept for four occupied floors and an occupied roof. The proposal therefore reserves four separated vertical cores, two accessible lifts, multiple direct discharges and a continuous public spine.

### 3.5 Protected block entities

Fifteen empty-inventory kitchen block entities sit at y65, z95:

- smokers at x `-67..-63`;
- furnaces at x `-61..-57`; and
- barrels at x `-55..-51`.

Their exact states and complete NBT remain protected. A later design may retain them in place or move them through a reviewed NBT-preserving migration, but it may not erase or casually replace them.

DRAFT · NOT AS-BUILT

DRAFT — NOT AS-BUILT — LIVE CLOSEOUT GATES PENDING

The occupied building is dry, but the deeper census found waterlogged natural cells at `(-3,51,146)` and `(-12,53,129)`, plus gravel in the lower geology. Underpinning below y62 therefore requires a fresh neighbor-fluid and gravity census. The complete surface plate must not be mistaken for permission to blindly drill into the terrain.

---

# 4. Employee lounge and staff path: planned, not existing

The selected immutable snapshot contains natural terrain—not a building—at the planned employee lounge. The town-expansion generator proposes:

| Element | Exact contract |
|---|---|
| Employee lounge | x `-94..-73`, y `64..76`, z `90..121` |
| Staff greenway destination | `(-82,65,90)` |
| B01 wall connection | x `-73..-72`, y `65..68`, z `103..105` |

The source parcel has zero block entities and zero fluids. At the proposed wall join, `(-73,65,103)` is air, `(-72,65,103)` is smooth quartz, and the B01 wall at `(-72,66,104)` and `(-72,68,105)` is tinted glass.

This distinction matters. The lounge and greenway are a dependency package, not as-built infrastructure. B01, the greenway and the lounge must be rebased onto one same-moment prerelease snapshot. The connection opens only after both the greenway and the lounge independently pass.

---

# 5. Research translated into design

The design uses public primary and government technical sources as planning precedents:

- Cape Cod National Seashore visitor centers combine staffed trip planning, exhibits, films, a store, restrooms, accessible media and outdoor observation. B01's first floor follows that coherent orientation sequence.
- The National Park Service's Wayside Exhibit Planning places orientation where the need to know meets the need to explain. B01's map, program board and exterior information start at arrival rather than appearing deep inside.
- GSA commercial coworking mixes open and reservable workspaces, offices, conference rooms, kitchens, restrooms and support. B01's second floor provides all of those settings around the retained atrium.
- GSA's 2024 P100 facilities standards treats architecture, accessibility, structure, fire protection, enclosure and building systems as coordinated disciplines. The B01 support, water, routes and envelope therefore release separately but reconcile together.
- The Department of Justice 2010 ADA Standards require continuous accessible routes between arrival, occupied levels and amenities, and accessible entry to pools and spas. Both lifts, the roof deck and the aquatic entries stay in the acceptance contract.
- The CDC Model Aquatic Health Code treats pool and hot-tub safety as design, construction, operations, maintenance, staff and water-quality work—not simply a water vessel. B01 reserves separate wet plant, inspection and dry circulation.
- OSHA's exit-route standard calls for permanent, adequately separated, remotely located routes with sufficient capacity and direct discharge. The proposal uses four cores and does not count the private staff link as public egress.
- OSHA's fall-protection criteria inform occupied roof-edge, stair and opening protection. Every terrace and roof route receives a guard contract.
- The Whole Building Design Guide's vegetative-roof guidance requires coordinated waterproofing, protection, drainage, root barrier, growing medium and wind/load review. B01's roof gardens are complete roof assemblies, not dirt placed on a slab.
- WBDG's waterproofing integrity guidance warns that water testing itself can exceed safe load or cause damage. B01's basins are divided, inspected dry and filled only in a separately reversible final transaction.

These are planning translations for a fictional Minecraft build. A real project would require the locally adopted code, registered design professionals and permits.

---

# 6. Exact proposed program

### Level 1 — y64 floor, y65..69 clear

Level 1 stays fully public and immediately useful:

- arrival/reception: x `-34..34`, z `148..163`;
- west visitor services: x `-70..-38`, z `132..163`;
- east exhibits/retail: x `38..70`, z `132..163`;
- retained production kitchen/BOH: x `-70..-38`, z `92..125`;
- cafe/dining: x `-35..-4`, z `92..125`;

DRAFT — NOT AS-BUILT — LIVE CLOSEOUT GATES PENDING

- orientation studio: x `58..70`, z `92..125`; and
- staff connection/service corridor: x `-72..-28`, z `101..107`.

Reception includes a map, accessible counter, program board and direct view to the main circulation. Visitor services includes trip planning, accessibility, first aid, family care and lost-and-found. The west service corridor connects to the planned employee lounge without becoming a public shortcut.

## Level 2 — y70 floor, y71..75 clear

The second floor is the work club:

- west open cowork: x `-70..-24`, z `92..125`;
- east reservable cowork: x `24..70`, z `92..125`;
- quiet work/reference library: x `-70..-24`, z `132..163`;
- meeting/training suite: x `24..70`, z `132..163`; and
- protected atrium: x `-20..20`, z `110..145`.

Open team settings and social work areas are kept apart from quiet work and private conversations. Two deliberate bridges cross the atrium; a blanket floor fill is prohibited.

## Level 3 — y76 floor, y77..82 clear

The new third level sets back to x `-60..60`, z `98..157`, preserving the long lower façades and creating patios on the existing slab:

- display/event kitchen: x `-58..-30`, z `100..125`;
- great social hall: x `-27..27`, z `100..132`;
- club/private dining: x `30..58`, z `100..132`;
- event lounge: x `-38..38`, z `135..155`;
- isolated hot-tub plant: x `-58..-42`, z `142..156`;
- north patio: z `90..97`;
- south patio: z `158..165`; and
- west/east gardens: x `-72..-61` and `61..72`.

The patios and gardens get a real membrane/drainage/root-barrier contract and remain dry until the roof assembly passes.

## Level 4 — y83 floor, y84..89 clear

Level 4 is a controlled 18-plus hospitality and wellness floor, enclosed within x `-60..60`, z `98..157`.

The access-control reception is x `-18..18`, z `142..156`. There is no direct public sightline through it. The west side contains a general wellness suite, a separately screened clothing-optional lounge and a three-tub hot-tub room. The east side contains an adult quiet commons and four private red rooms/wellness suites.

The three hot-tub water cells are bounded:

- x `-53..-49`, y `85..86`, z `146..150`;
- x `-44..-40`, y `85..86`, z `146..150`; and
- x `-35..-31`, y `85..86`, z `146..150`.

Every adult area has a privacy vestibule, accessible route, staff call point and emergency egress that cannot be defeated by age-control hardware.

The four private red rooms are:

| Suite | Exact bounds |
|---|---|
| RED-A | x `26..40`, y `84..89`, z `128..140` |
| RED-B | x `42..56`, y `84..89`, z `128..140` |
| RED-C | x `26..40`, y `84..89`, z `143..154` |
| RED-D | x `42..56`, y `84..89`, z `143..154` |

Their shared design language is red, burgundy, oxblood, dark oak and charcoal. Each receives bed/lounge furniture, concealed adult-item and general storage cabinetry, a decorative swing or hammock frame, wash/cleanup support, acoustic separation and a two-door privacy vestibule. Evidence images show architecture and circulation only; no explicit imagery or graphic detail is allowed.

## Occupied roof — y90 deck

The occupied roof envelope is x `-60..60`, y `90..102`, z `98..157`:

DRAFT · NOT AS-BUILT

- roof garden: x `-30..-20`, y `91..98`, z `134..154`;
- dining deck: x `-18..8`, z `100..154`;
- pool deck: x `8..58`, z `104..146`; and
- isolated pool plant: x `50..58`, y `91..98`, z `104..143`.

The pool water is bounded by x `12..48`, y `92..94`, z `108..140`. Its primary basin is x `9..51`, y `90..95`, z `105..143`. A dry secondary catch/inspection envelope extends to x `7..53`, y `90..96`, z `103..145`. That outer coordinate box denotes the perimeter curb, catch trench and inspection zone—not a solid fill.

The accessible entry planning zone is x `12..18`, y `92..94`, z `108..116`. The final release must implement a compliant means of entry in the project design vocabulary and retain dry deck circulation around it.

---

# 7. Circulation and egress

The main public spine is x `-3..3`, z `90..165`; the major cross-spine is z `126..132`. Four vertical cores are reserved:

| Core | Bounds | Role |
|---|---|---|
| A | x `-30..-18`, z `106..120` | main stair, accessible lift, current-stair replacement |
| B | x `-70..-58`, z `146..160` | remote west stair and discharge |
| C | x `58..70`, z `146..160` | remote east stair and discharge |
| D | x `58..70`, z `94..108` | service stair, second lift, north/east discharge |

All extend from y64 through y100. No ladder, water elevator, trapdoor or decorative stair counts as a primary route. At least two remote routes must serve every occupied level and roof. Exit capacity may not decrease toward discharge.

---

# 8. Preliminary support grid

The study reserves a 45-line grid at:

- x `{-64,-48,-32,-16,0,16,32,48,64}`; and
- z `{96,112,128,144,160}`.

The y50..90 exact-state review found gravel on four lines. The reserved study grid therefore makes four local adjustments:

| Remove | Reserve |
|---|---|
| `(48,96)` | `(50,96)` |
| `(64,96)` | `(63,96)` |
| `(32,128)` | `(32,127)` |
| `(32,160)` | `(32,162)` |

The adjusted 45 lines contain zero decoded fluid or gravity cells from y50 through y90 and collide with none of the 15 block entities. This is useful survey evidence, but it is **not** structural certification or an authorized operation. A later support design must resolve current room/furniture conflicts, establish exact foundations and produce an exact inverse.

---

# 9. Water and enclosure rules

The pool and hot tubs release last:

1. support and vertical cores pass first;
2. dry upper shells and guards pass;
3. dry floor fitouts pass;
4. primary and secondary basins are built empty;
5. plant rooms, drains, catch zones and rollback pass;
6. only then are source-water cells placed in a separate transaction.

Any drift involving neighbor fluids, waterlogged states, gravity blocks, entities, block entities or protected features aborts the release. A pool that does not leak in Minecraft is not proof of real structural or aquatic safety.

DRAFT · NOT AS-BUILT

## 10. Atomic package plan

The release should be decomposed into independently reversible packages:

1. same-moment immutable prerelease snapshot and database hash;
2. matched before media and object census;
3. support and vertical-core transaction;
4. post-support snapshot and independent route/load-path verification;
5. dry upper shells, roof guard and enclosure;
6. employee greenway and lounge, independently accepted;
7. guarded west-wall staff connection;
8. dry public, cowork, hospitality and adult fitouts;
9. empty pool/hot-tub basin and wet-plant transaction;
10. final water transaction;
11. full bidirectional public/staff/accessible/emergency route QA;
12. matched after media; and
13. database child-feature import and reconciliation.

The original B01 database feature and every source artifact remain until the new child-feature set, media, routes and rollback all reconcile.

---

## 11. Acceptance checklist

- ☐ New immutable snapshot and database hashes match the release manifest.
- ☐ All 15 B01 block entities have exact before-state/NBT evidence.
- ☐ Support grid and all four cores have exact forward and inverse operations.
- ☐ No unresolved fluid, waterlogged, gravity, entity or feature collision.
- ☐ B01 has at least two remote routes from every occupied level and roof.
- ☐ Every occupied level and aquatic amenity has an accessible route.
- ☐ Lounge and greenway exist before the B01 staff wall opens.
- ☐ The y70 atrium remains deliberate and safely bridged.
- ☐ Roof edges, terraces, stairs and openings have complete guards.
- ☐ Roof garden assembly has membrane, protection, drainage and root barrier.
- ☐ Pool and hot tubs pass empty-basin inspection before water placement.
- ☐ Pool plant and hot-tub plant remain outside guest circulation.
- ☐ Adult areas have age control, privacy vestibules, acoustic separation and unobstructed emergency egress.
- ☐ Adult-area fitout and media remain tasteful and non-graphic.
- ☐ Every public, staff, accessible and emergency route passes both directions.
- ☐ Matched before/after images use fixed cameras and exact object IDs.
- ☐ Database child records import only after the accepted post snapshot.

---

## 12. Bottom line

B01 is an excellent base for a dramatically better Guest Services building. It already has a full foundation plate, two fitted floors, a valuable atrium, a verified south arrival and a complete dry roof. The correct move is not to discard that work. It is to use it as the podium for two set-back levels and a roof house.

But the pool is not ready to build. The absence of interior continuous support is an objective stop condition. Finish the support and egress release first, coordinate the employee lounge and path second, complete dry upper levels third, and add water only after the empty containment system proves itself.

DRAFT — NOT AS-BUILT — LIVE CLOSEOUT GATES PENDING

# MainStreet Underground Warehouse and Panorama RV District Engineering Memo

Document ID: `TE-MSA-UNDERGROUND-WAREHOUSE-RV-DISTRICT-ENGINEERING-01`
Date: 2026-07-28 UTC
Decision: **SITED DESIGN BASIS / NOT AN EXECUTABLE RELEASE**
Mode: copied-snapshot and read-only-database analysis; no Minecraft, RCON, database, Sites, or Box mutation

The exact machine schedule is `mainstreet-underground-warehouse-rv-district-engineering.json`. It controls whenever prose and coordinates diverge.

---

## 1. Outcome

Two compatible facilities are now sited:

1. a 93×82-block, ten-block-clear high-bay logistics and vehicle hall under the western half of MainStreet USA's P01 parking field; and
2. a 206×201-block RV sales/service/travel district on the unregistered peninsula southwest of Panorama Oasis, connected by a 112-block side road.

The underground chamber stops at y=61. P01's parking surface is y=64, leaving y=62 and y=63 as two untouched support courses. The chamber does not enter C01. Its west earth-ramp portal mirrors the east-side bunker arrival in the parking composition without sharing C01's structures, tunnels, rooms, or routes.

The RV campus contains twelve exact-length, walk-in display vehicles—four each at 29, 39, and 48 blocks/feet—plus a lavish delivery/customer building, separate sales building, four-bay semi-height repair shop, original upper-Midwest-style travel center, fuel canopy, dive bar, and discreet, non-graphic adult nightclub.

These are coordinate and program decisions, not construction claims.

---

## 2. Evidence boundary

### 2.1 Immutable snapshot

Source:

`data/worldsnap-town-expansion-complete-baseline-20260728T0315Z/region`

Aggregate SHA-256:

`0bb1faa61ca69724816afe682080e3a517fa974ec1300c3651e399ea03505501`

Identity:

- 9 Anvil region files;
- 59,287,653 bytes; and
- algorithm `sha256(filename + NUL + bytes + NUL, sorted by filename)`.

### 2.2 Read-only database

`data/world-map.db`

SHA-256:

`1bd71512b9246b67b25a7fff91cd0745eb47d089e66fa15ee7ab23a41b21a503`

The database opened read-only and contained 875 features, 23 scans, and 1,881 observations. It was not updated.

### 2.3 Exact chamber census

The chamber census covered every cell in:

`[-112,50,181]..[-20,61,262]`

Results:

DRAFT · NOT AS-BUILT

| DRAFT — NOT AS-BUILT — LIVE CLOSEOUT GATES PENDING | |
|---|---|
| Inclusive volume | 91,512 cells |
| Chunks read / missing | 36 / 0 |
| Full water blocks | 0 |
| Lava blocks | 0 |
| Air / cave air / void air | 0 |
| Block entities | 0 |
| Waterlogged glow-lichen states | 6 |

The chamber is solid natural material, but it contains aquatic plant material and six waterlogged states. The wider survey found an aquifer below and west of the chamber, especially around y=47–49. That is why the design uses a continuous liner, threshold drain, sump, and an uncompromisable neighbor-fluid gate. “Zero full water blocks in the chamber” is not permission to skip hydrology checks.

---

# 3. Research basis

The plan converts real guidance into conservative Minecraft geometry; it does not claim real-world code approval.

- OSHA’s warehousing guidance requires permanent aisles to remain clear and marked, warns about forklift and pedestrian conflicts, calls for dock-edge warnings, ventilated battery charging, and unobstructed exit routes.
- OSHA’s narrow-aisle guidance says conventional counterbalanced-truck rack layouts typically require about a 12-foot aisle. The rack hall therefore reserves twelve clear blocks and does not pretend that decorative three-block gaps are forklift aisles.
- OSHA’s enclosed and hazardous-area guidance requires adequate ventilation where internal-combustion vehicles operate. The underground vehicle hall therefore receives dedicated exhaust, carbon-monoxide monitoring, and a no-idling operating rule.
- OSHA 1910.36 is the egress baseline: permanent remote exits, direct discharge, fire-separated stairs, adequate width/headroom, and outward-swinging doors where required. The hall has three surface stairs rather than relying on the vehicle ramp.
- The U.S. Access Board’s ADA standards control pedestrian accessibility principles. A separate accessible-feeling stair/lift equivalent remains an engineering gate; the vehicle ramp is not represented as an accessible pedestrian ramp.
- The FHWA Truck Parking Development Handbook supplies the WB-67 swept-path method and design-vehicle discipline. Both the warehouse ramp and RV repair loop require simulated swept paths before an operations file can exist.
- RVIA’s standards program treats an RV as a vehicle containing temporary living quarters and emphasizes complete electrical, plumbing, heating, fire, and life-safety systems. Display units therefore receive real walk-in programs rather than empty colored shells.
- NFPA 30A’s motor-fuel and repair-garage separation principles appear in the NFPA-hosted NFPA 1 extract. The fuel court and repair shop are different hazards, and neither shares a circulation path with food or nightlife queues.
- EPA’s UST release-prevention guidance informs the travel-center spill/overfill-control diagram. Minecraft tanks are symbolic; no real fuel-system compliance claim is made.
- The 2022 FDA Food Code informs protected receiving, prep, warewashing, handwashing, waste, and service paths. Warehouse cafeteria/kitchen, travel-center kitchen, bar kitchen, and club pantry are separate operations.
- NIST’s Station nightclub findings are controlling caution for the club: automatic suppression concept, multiple genuinely remote exits, distributed exit capacity, low-level wayfinding, no pyrotechnics, and no ignitable foam aesthetic.
- The U.S. Department of Defense Supply and Administration Warehouse Design Guide informs the legible sequence from receiving through distribution, counter service, administration, open warehouse, and loading functions.

---

# 4. Underground warehouse siting

## 4.1 Chamber and surface contract

| Element | Inclusive bounds / elevation |
|---|---|
| Outer chamber | `x[-112,-20] y[50,61] z[181,262]` |
| Clear interior | `x[-110,-22] y[51,60] z[183,260]` |
| Structural floor | y=50 |
| Ten-block clear high bay | y=51..60 |
| Structural roof | y=61 |
| Untouched support | y=62..63 |
| Existing parking | y=64 and above |

accessible pods, canopies, lamps, low lights, bicycle corral, and walking routes must compare identically before and after.

The chamber occupies the west lot to avoid C01, whose registered complex begins at x=100. The nearest Raven Rock personnel-route geometry is around y=-10..3, leaving at least 46 blocks below the warehouse floor.

## 4.2 West earth ramp

The ramp is an original planted earth cut opposite the parking-side C01 entrance:

`x[-136,-108] y[50,69] z[167,248]`

Centerline:

```
(-131,64,171)  west surface mouth
(-131,64,176)  level transition
(-131,58,236)  first run, 60 horizontal / 6 fall = 10.0%
(-125,58,244)  protected hairpin landing
(-118,58,236)  return transition
(-118,51,173)  second run, 63 horizontal / 7 fall = 11.11%
(-112,51,184)  receiving threshold
```

The vehicle envelope is ten blocks wide and eight blocks high. Five-block transition zones soften the top, hairpin, and bottom grade breaks. The ramp also gets:

- a separate raised pedestrian refuge;
- high-visibility barriers and end protection;
- drain trench, sump, and leak alarm at the low threshold;
- height bars before descent;
- retaining-wall ribs, planted roof, and stone portal;
- no fuel use; and
- RV plus WB-67 swept-path proof.

The ramp is not an exit substitute. A vehicle fire or disabled RV cannot be allowed to remove the only means of escape.

## 4.3 High-bay program

### RECEIVING

`UW01-RECEIVING`, `x[-110,-82] z[183,200]`

The arrival sequence is ramp → inspection → quarantine/staging → rack or vehicle zone. A protected pedestrian island keeps staff out of the turning envelope.

### RACK HALL

`UW01-RACK-HALL`, `x[-110,-52] z[203,260]`

Five long rack runs use end guards, heavy-load-low logic, overhead lighting, and twelve-block clear conventional-truck aisles. No rack end may interrupt an exit line, fire cabinet, or cross aisle.

### RV/CAMPER STORAGE

`UW01-VEHICLE-STORAGE`, `x[-79,-52] z[183,200]`

Eight six-by-22 clear stalls provide engine-off indoor storage, battery isolation, detection/ventilation, and protected pedestrian access. There is no fueling underground.

### OFFICES AND FOOD

The east support spine contains:

- offices/dispatch at `x[-49,-24] z[183,207]`;
- staff cafeteria at `x[-49,-36] z[210,231]`; and
- commercial kitchen at `x[-33,-24] z[210,231]`.

The kitchen has its own receiving vestibule, stores, prep, cook, warewash, and waste-hold sequence. A full-height compartment and clean-side route separate it from vehicle storage, battery charging, plant, loading, and the private wellness wing.

### ADULT WELLNESS AND RELIEF SUITE

The non-graphic private suite occupies:

`x[-33,-24] y[51,56] z[234,260]`

DRAFT · NOT AS-BUILT

DRAFT — NOT AS-BUILT — LIVE CLOSEOUT GATES PENDING

opaque walls, separate exhaust, dedicated sanitation, and no direct door into food, warehouse, loading, or mechanical rooms. The memo intentionally assigns no graphic or sexualized fixtures.

### 4.4 Egress and plant

Three remote stairs discharge outside the chamber:

| ID | Bounds | Surface discharge |
|---|---|---|
| `UW01-EXIT-NW` | `[-136,50,167]..[-127,69,181]` | `(-132,65,169)` |
| `UW01-EXIT-SW` | `[-134,50,258]..[-125,69,271]` | `(-130,65,268)` |
| `UW01-EXIT-NE` | `[-19,50,167]..[-10,69,180]` | `(-15,65,169)` |

The exact surface heads are perimeter structures, not parking-bay removals. They still require a fresh P01 child-feature and block-state gate.

Mechanical space at `x[-49,-36] z[234,247]` reserves separate vehicle exhaust, outside air, battery exhaust, CO/NO2 detection concept, fire riser, drainage, sump, and leak alarm. It is a functional room, not decorative fans.

---

## 5. Panorama RV sales and service district

### 5.1 Siting

Campus:

`x[-350,-145] y[60,112] z[-380,-180]`

The exact campus contains no registered detailed database feature and no block entity. It overlaps only the broad MainStreet/Raven Rock property contexts at its northeast edge. The land is a rolling peninsula: the surveyed candidate surface ranged roughly y=62..95, with a dry central/east upland and water at lower west/north edges.

This is a terraced-landscape project. It is not permission to flatten a 206×201 rectangle. The release must retain useful high ground, bridge local drainages, and publish a per-column grading balance.

### 5.2 Panorama Service Parkway

The 112-block side-road centerline is:

```
(-230,70,-474)  Panorama Oasis south forecourt
(-242,69,-451)
(-256,67,-428)
(-271,72,-405)
(-286,77,-381)  RV campus gate
```

It has a twelve-block carriageway, three-block shoulders, a separate six-block walking greenway, protected wet crossings, and a 60-block-diameter RV turning bulb at the gate. Its selected line stays east of the registered Malt & Lantern, Gatehead, Ferry, and High Street buildings. The broader survey box contained 26 block entities, all inside those protected Westlight buildings; the selected centerline does not enter their bounds.

### 5.3 Display rows

The display field is:

`x[-342,-246] y[74,90] z[-370,-212]`

Longitudinal scale is one block per named foot. Vehicle widths are expanded to five or six blocks so the interiors are actually walkable.

| Row | Units | Exact longitudinal ranges | Height |
|---|---|---|---|
| 29-foot | `RV29-A..D` | z=-360..-332 | y=78..83 |
| 39-foot | `RV39-A..D` | z=-321..-283 | y=78..84 |
| 48-foot | `RV48-A..D` | z=-272..-225 | y=78..85 |

The four x positions for the 29/39 rows are `[-338,-334]`, `[-326,-322]`, `[-314,-310]`, and `[-302,-298]`. The 48-foot row uses six-block-wide bodies at `[-338,-333]`, `[-325,-320]`, `[-312,-307]`, and `[-299,-294]`.

- cab or hitch nose;
- entry steps and operable-feeling door;
- galley;
- dinette/lounge;
- washroom;
- sleeping zone;
- storage;
- roof equipment and running lights; and
- exact model placard, floor plan, exterior, entry, and interior capture.

## 5.4 Customer, sales, and repair buildings

The lavish customer/delivery center occupies:

`[-238,76,-370]..[-195,101,-337]`

It gets a two-story atrium, concierge, lounge, finance suites, handover theater, hospitality cafe, family room, roof terrace, and complete support rooms. Expensive means generous circulation, layered materials, daylight, acoustics, and complete operations—not random ornament.

The separate sales building occupies:

`[-238,74,-330]..[-195,94,-302]`

It contains a model gallery, open sales desks, private consultation, trade-in appraisal, secure documents, and staff support.

The repair shop occupies:

`[-238,72,-294]..[-174,101,-242]`

Four west-face doors each provide 12×16 clear blocks:

- Door 1: z=-292..-281;
- Door 2: z=-279..-268;
- Door 3: z=-266..-255; and
- Door 4: z=-253..-242.

The `x[-298,-239] z[-299,-231]` service court supports straight staging and WB-67/RV swept-path checks. Parts, tools, technician support, waste/fluid hold, service writing, and mechanical exhaust are all programmed.

## 5.5 Travel center

The original upper-Midwest-style travel center—not a copied Kwik Star building—occupies:

`[-238,72,-232]..[-195,94,-190]`

It includes a market, hot-food kitchen, coffee/bakery, seating, driver lounge, showers, toilets, laundry, dispatch kiosk, and a separate delivery/waste path.

The pull-through fuel court is:

`[-296,71,-226]..[-246,86,-184]`

Its representation includes a high-clear canopy, separate RV and car lanes, emergency shutoff, spill-control grading, and symbolic protected tank zone. Fuel traffic never uses a food receiving court or nightlife queue.

## 5.6 Roadhouse and adult club

The dive bar occupies:

`[-188,72,-232]..[-155,90,-207]`

It contains a bar, booths, small stage, backbar, toilets, compact separate kitchen, rear delivery door, and two remote exits.

The private adult nightclub occupies:

`[-188,72,-276]..[-150,96,-239]`

It is non-graphic and has:

- discreet frontage;
- age-control vestibule at `[-188,73,-260]..[-180,81,-251]`;
- coat/check reception;
- main lounge;
- dance/performance room;

DRAFT - NOT AS-BUILT

- toilets and staff/security;
- a separate service pantry;
- a rear service path at `[-149,72,-278]..[-145,86,-232]`;
- one main and two remote exits;
- suppression/alarm concept and low-level wayfinding; and
- no pyrotechnics or ignitable-foam decoration.

The patron queue, fuel lanes, repair court, food receiving, and club service route never share a pinch point.

---

# 6. Circulation rules

The RV district reserves:

- 24-block main vehicle aisles;
- 20-block clear fire/service lanes;
- 60-block-diameter turning bulbs;
- six-block protected pedestrian promenades;
- one-way display loops where practical; and
- a service route behind the repair, food, bar, and club buildings.

Those generous dimensions are design reserves, not final code claims. The generator must run a discrete swept-path simulation for every 48-foot display unit, repair-bay movement, fuel pull-through, delivery route, and emergency route. No “it looks wide” acceptance is allowed.

---

# 7. Collision and preservation decision

## Underground warehouse

- zero missing Anvil chunks;
- zero block entities;
- zero chamber air/cave-air, full-water, or lava cells;
- zero known 3D database-feature intersections in the y=50..61 chamber;
- C01 begins at x=100, 120 blocks east of the chamber’s east wall;
- P01 detailed features remain above at y=64+; and
- Raven Rock route geometry remains more than 46 blocks below.

## RV district

- zero missing chunks in the selected campus;
- zero block entities in the selected campus;
- zero detailed registered database features in the selected campus;
- two broad contextual records cross the northeast portion and require district-owner coordination;
- 26 block entities in the broad Oasis-to-campus survey belong to existing Westlight buildings outside the selected road centerline; and
- water, trees, grade, caves, gravity blocks, entities, and concurrent future packages still require a fresh exact-cell audit.

The database is not a substitute for block-state collision detection. “No registered feature” does not mean “empty.”

---

# 8. Required release package

No live work is authorized until every gate passes:

1. freeze and hash a same-moment immutable snapshot;
2. refresh exact database and concurrent-package intersections;
3. enumerate every forward cell and exact reverse cell;
4. prove P01 y=62..64 and every parking child unchanged;
5. census block entities, containers, inventories, fluids, waterlogged cells, gravity blocks, caves, support, and entities with a three-block halo;
6. simulate warehouse ramp, 48-foot RV, fuel, repair, delivery, fire, and emergency swept paths;
7. independently review egress, fire separation, ventilation, kitchen, sanitation, fuel, repair, assembly, and wellness separation;
8. preflight forward and rollback with strict no-op behavior;
9. clear players/entities and lock the transaction order;
10. commit atomically or compensate in exact reverse order;
11. freeze and hash the post snapshot;
12. prove installed state and exact rollback;

14. capture matched before/after evidence;
15. import database objects/rooms/routes/media only after physical acceptance;
16. verify database integrity and zero foreign-key failures;
17. regenerate maps, floor plans, catalog, PM PDF, and owner-only Sites version; and
18. sync the accepted register to Box and compare every remote SHA-1.

---

# 9. Media and database contract

Required maps:

- north-up P01 surface/underground overlay;
- y=50 high-bay plan;
- ramp profile and swept-path plan;
- rack/vehicle/pedestrian conflict plan;
- egress/fire-compartment plan;
- food/plant/wellness separation plan;
- Panorama-to-RV regional route;
- RV campus figure-ground and grading;
- RV display-row plan;
- customer/sales/repair/travel/nightlife plans; and
- fuel/service/fire-lane plan.

Required screenshots include matched surface parking views, west portal, ramp top/hairpin/bottom, receiving, every rack aisle, vehicle row, offices, cafeteria, kitchen, plant, non-graphic wellness vestibule/rooms, all twelve RV exteriors/entries/interiors, four repair doors, customer atrium, sales gallery, travel center, fuel pull-through, dive bar, club frontage/age vestibule/main room, and separate service routes.

Every final object and room requires a stable external ID, parent relation, exact post bounds, immutable snapshot identity, floor-plan relation, primary camera relation, media hash, route relation where applicable, and accepted database-import ledger.

---

# 10. Final engineering decision

The two sites are defensible enough to advance into detailed surveying and package generation:

- the underground chamber is deliberately shallow, solid, and west-held;
- the parking field remains structurally and functionally untouched above it;
- the vehicle ramp is remote from C01 and is not counted as the sole exit;
- food, vehicles, battery/plant, wellness, fuel, repair, and assembly uses are separated;
- the RV campus has exact capacity and building envelopes; and
- the selected campus and road avoid known detailed database objects.

They are not yet safe to build. The remaining uncertainty is exact-cell engineering: source states, aquifer neighbors, surface grading, protected vegetation, simultaneous project envelopes, dynamic entities, and complete forward/rollback generation.

DRAFT · NOT AS-BUILT

DRAFT — NOT AS-BUILT — LIVE CLOSEOUT GATES PENDING

# Town Expansion media camera remediation and release

## Purpose and truth boundary

This record explains the terminal-snapshot camera corrections made before the Town Expansion atlas, exact-object gallery, database media relations, Box handoff, and Sites publication were frozen. It is a media-only correction record. It does not claim a new world mutation.

The canonical set remains 589 paired shots and 1,178 captures: thirteen maps (one whole-world overview plus twelve district maps), 340 exact database objects, authored room and venue views, and two evidence passes for every shot. Both passes use identical camera geometry and are bound to terminal snapshot SHA-256 `c39d0d67c9dec737aa5807cf5fa56a84f3c3d38d4b13d0f82599d3eb30fa6751`.

## Why the rerender was required

The complete diagnostic sweep preserved every rejected raw frame and found three distinct defect classes:

1. the eye occupied an opaque block, including glass or structural material;
2. the central ray hit a foreground wall, tree, or unrelated surface before reaching the exact database owner; or
3. the frame passed basic byte-size checks but did not visually substantiate its named room, route, building, portal, or infrastructure role.

Candidate searches were bounded to the affected owners. Acceptance required an air eye, an in-owner look point, the first opaque surface inside the exact owner, a nonblank 1280×720 render, and a semantic review of the full-size image. Unchanged capture contracts were adopted only when their complete camera contract and terminal-snapshot binding were byte-identical.

## Reviewed terminal camera contracts

## Release artifacts

- Canonical manifest: `data/exports/town-expansion-media-2026-07-28/capture-manifest.json`
- Exact object/media/database crosswalk: `data/exports/town-expansion-media-2026-07-28/object-media-database-crosswalk.json`
- Final render directory: `data/exports/town-expansion-media-2026-07-28/terminal-c39d-render-v6`
- Static preflight: `data/world-review/town-expansion-media-static-preflight-final-expanded-20260728.json`
- Cache-adoption audit: `data/world-review/town-expansion-media-camera-cache-adoption-final-expanded-20260728.json`
- Final media acceptance: `data/world-review/town-expansion-r1-post-release-media-2026-07-28.json`

The diagnostic report may be retained for defect archaeology, but publication is allowed only from the complete canonical `capture-report.json` and the final media acceptance report.

## Terminal acceptance

The v6 canonical resume completed all 1,178 captures with zero rejects against the terminal snapshot. All 26 map captures carry map-mode geometry with no perspective FOV. Independent media QA passed all 589 paired shots, all 1,178 files, all 13 map pairs, and all 340 crosswalk objects with finality `ACCEPTED_POST_RELEASE_MEDIA`.

Two earlier complete verification attempts were OOM-killed at approximately 14.3 and 14.9 GB anonymous RSS. The cause was native canvas-backed image surfaces retained across the complete PNG set, outside the JavaScript heap. The verifier now serializes measurements through one reusable Image, canvas, and context, and the resume path no longer measures accepted files twice. Quality metrics matched 205 prior batch records with zero drift. The accepted bounded rerun completed under a 2 GB systemd memory scope at 182,480 KB peak RSS. The structured remediation record is:

`data/world-review/town-expansion-media-render-memory-remediation-20260728.json`

Fail-closed map-FOV and report-relative path attempts are preserved at:

- `data/world-review/town-expansion-capture-report-map-fov-contract-fail-20260728T2103Z.json`
- `data/world-review/town-expansion-r1-post-release-media-contract-fail-20260728T2104Z.json`
- `data/world-review/town-expansion-r1-post-release-qa-media-path-contract-fail-20260728T2107Z.json`

The corrected consolidated post-release report is `data/world-review/town-expansion-r1-post-release-qa-2026-07-28.json`; it reports `PASS` and `ACCEPTED` with the media gate included.

DRAFT - NOT AS-BUILT

DRAFT — NOT AS-BUILT — LIVE CLOSEOUT GATES PENDING

# Modern Underground Corridor Standard

Status: binding design source for new Town Expansion R1 underground routes and for the replacement pilot on the former Ravenrock route segment.

This is a Minecraft design standard, not a representation of code compliance for a real occupied structure. It replaces the project's deprecated T2B visual and circulation language wherever this release models new work.

## Binding spatial rules

- Main owner and civic circulation uses a minimum five-block clear width and five-block clear height.
- A level, continuous center route is mandatory. One-block jumps, ladder-only access, alternating-tread shortcuts, and loose stair fragments are forbidden.
- Every elevation transition needs a full-width landing before and after the stair flight. Major vertical changes pair the broad stair with a lift analogue.
- Public, staff, performer, owner, service, and emergency routes receive different identity bands and cannot become an unlabeled shared maze.
- Doors sit on level maneuvering zones. Security doors and airlocks cannot consume the clear route.
- Long routes repeat lighting and wayfinding at predictable intervals. Refuge or rest rooms must sit beside the travel path, never in it.
- New occupied underground areas require two deliberately separated egress directions unless a reviewed scope explicitly documents a different fictional-world constraint.

## Material and wayfinding language

- Primary floor: smooth quartz with inset blue/cyan centerline lighting.
- Walls: light-gray concrete with a continuous cyan identity band.
- Ceiling: white concrete with repeatable sea-lantern strips.
- Landings: brighter quartz frames and a color-coded destination threshold.
- Mechanical/service recesses: polished deepslate, kept outside the clear five-by-five route.
- The deprecated T2B palette and its jump-like grade changes are prohibited in newly modeled occupied corridors.

## Research basis

The U.S. Access Board explains that accessible circulation should coincide with the principal circulation path, that continuous routes need stable clear surfaces, and that vertical circulation should not be hidden away from the main route. Its standards also distinguish walking surfaces, ramps, stairs, and lifts, requiring landings and controlled slopes rather than abrupt changes. Those principles inform the generous Minecraft analogue:

- U.S. Access Board — Accessible Routes
- U.S. Access Board — Stairways
- U.S. Access Board — Accessible Means of Egress

NFPA 502 identifies emergency exits and emergency lighting as explicit road tunnel design concerns. Town Expansion uses that as a high-level prompt for repeatable lighting and legible separated exits; it does not claim an NFPA review:

- NFPA 502 public standard portal

## Release checks

The generated report must show:

- five-by-five clear route dimensions;
- no jump geometry;
- a modern replacement scope over the reviewed historical pilot;
- no deprecated palette inside the replacement's occupied section;
- protected block-entity and entity scans covering the full underground bounds;
- no active portal blocks in any offline portal-room scope.

DRAFT — NOT AS-BUILT

DRAFT — NOT AS-BUILT — LIVE CLOSEOUT GATES PENDING

# Non-Graphic Adult Interior Design Standard

**Status:** binding design and acceptance standard for the 2026-07-28 redevelopment; it is not evidence of a live build.
**Applies to:** C01 public adult wing and owner stack, Gilded Raven and its rest suites, Concord adult venues and broadcast rooms, Guest Services adult-only roof/interiors, manager mini-mansions, holdout home, and every other room explicitly assigned an adults-only program.
**Content boundary:** architecture, furniture, lighting, privacy, hospitality, spa, performance, storage and circulation only. No figures, anatomy, explicit imagery or depicted acts.

## Design intent

An adults-only room may not be an empty box with a sign. It must read as an intentionally planned hospitality or performance space before the program label is visible. The design language comes from three public precedents:

- The Moulin Rouge venue combines a large performance room, food-and-show seating, balconies, controlled sound and light, and many small warm-red table lamps. This supports layered seating, good sightlines, rich ceilings and a visible service/performance relationship rather than rows facing a doorway. Source: https://www.moulinrouge.fr/en/the-moulin-rouge/the-venue/.
- The Champagne Lodge describes private ground-level entries, bed-focused suites, fireplaces, whirlpools, steam rooms, walk-in showers, in-room pools, desks and seating. It also describes alternative bed/spa layouts instead of one repeated plan. This supports privacy vestibules, spa zones, differentiated suites and complete furniture groupings. Source: https://www.thecl.com/.
- The user's program requires a non-graphic suggestion of red rooms, specialty furniture, beds, lounges and private performance rooms. That suggestion must come from scale, silhouette, palette and adjacency, never explicit imagery.

## Mandatory room anatomy

Every private adults-only room must contain all of the following:

1. A privacy vestibule or offset entry that blocks a direct corridor-to-bed sightline.
2. A clearly modeled bed or upholstered platform with a headboard, foot clearance and two side surfaces.
3. A lounge group containing at least a chaise or sofa, two seats and a table.
4. Dressing space with a screen, wardrobe and closed prop/storage cabinetry.
5. A private wash or cleanup niche with basin, shower or spa fixture as appropriate.
6. Warm dimmable-looking ambient lights plus one brighter task-light group.
7. A decorative focal element: canopy, non-load-bearing frame, suspended lounge seat, fireplace, spa, art wall or small performance platform.
8. Two-block-clear normal walking circulation between entry, bed, lounge, storage and wash areas.
9. An inside-operable exit that requires no key, tool, switch puzzle or special knowledge.
10. Acoustic and visual separation from family rooms, public workspaces, food preparation and required egress.

Closed storage is mandatory. Loose “toy” props may be implied with colored containers, shelves and cabinets, but must not be modeled as explicit objects.

## Reusable but non-cloned themes

No two adjacent rooms may use the same plan, focal element and palette together.

| Theme | Primary palette | Furniture and architectural cues |
|---|---|---|
| Red velvet salon | crimson/dark-red wool, dark oak, blackstone, warm lanterns | raised bed, tufted-looking headwall, chaise, curtained alcove, brass-colored tables |
| Spa suite | calcite/quartz, pale wood, copper, sea lanterns | bed set away from entry, hot tub or plunge pool, walk-in shower, steam/sauna niche, robe storage |
| Cabaret chamber | burgundy, polished blackstone, gold accents | small platform, crescent audience banquette, table lamps, dressing screen, backstage storage |
| Gothic library salon | deepslate tile, dark oak shelves, red carpet | book wall, hearth, bed alcove, reading chaise, concealed wardrobe |
| Art-deco observation suite | black/white floor rhythm, copper, cyan glass | symmetrical lounge, framed bed, bar cabinet, stepped ceiling and indirect light bands |
| Blackened-steel studio | polished blackstone, iron, gray wool, red highlights | non-load-bearing frames, modular platform, closed lockers, wash bay, sharply zoned lighting |
| Pool lounge | dark prismarine, quartz, glass, warm wood | pool or spa as focal point, dry lounge deck, towels/robes storage, separated sleeping alcove |
| Owner ceremonial suite | deep red, blackstone, quartz, gold/copper accents | grand vestibule, large central bed, multiple seating groups, formal dressing, spa and private service route |

DRAFT — NOT AS-BUILT

## Main public-view theater

- A real stage and focal wall must be visible from every primary seating group.
- Seating may be tables, banquettes, balconies or shallow tiers, but may not face an entrance door.
- Provide at least two public aisles, a perimeter cross-aisle, accessible-looking open positions and two independent exits.
- Provide lobby, coat/storage, bar, washrooms, dressing rooms, prop/storage, performer route, staff/service route and control position.
- Public and performer circulation must not merge before the stage threshold.

## Small group room

- Five-person target capacity unless an exact schedule says otherwise.
- One focal platform or furniture grouping, five readable seats, privacy vestibule, closed storage and wash niche.
- Must not be a subdivided leftover corridor.

## One-to-one room

- Offset entry, one bed/platform, two-seat lounge, dressing/storage and wash niche.
- Door may not open directly to a main public concourse.
- Multiple rooms need a staffed antechamber and separate service/storage support.

## Adults-only club lounge

- A central bar or hospitality point, multiple seating zones, a quieter salon, visible wayfinding and a deliberate route to private rooms.
- At least three distinct furniture groupings must be visible from the entry.
- Back bar, cold/dry storage, wash station and staff route are part of the room program, not decorative labels.

---

# Private suite hierarchy

## Manager-house private suite

Minimum readable furnishings: one bed, one lounge/chaise, two additional seats, two side surfaces, one wardrobe, one closed specialty cabinet, one dressing screen, one wash fixture group, one decorative frame or canopy and two lighting groups.

## Tunnel rest suite

Must read like a USA Stadium suite adapted for rest: arrival lounge, refreshment counter, table seating, private themed room, washroom and service closet. It is not a bedroom opening directly off a bare tunnel.

## C01 public private rooms

The doubled public wing must contain at least four one-to-one rooms and at least twelve additional private/themed rooms. Every room receives a unique ID, theme, capacity, entry, furniture census and matched camera candidate. The classified public adult footprint remains at least 5,364 blocks.

## C01 owner stack

The owner club, arrival suite, exact fifteen-suite poly-living level and exact three-bedroom master compound retain their previously frozen counts. Each of the fifteen suites must contain a bedroom, ensuite, rain-shower silhouette, walk-in closet, sitting area, mini-office, front door and rear owner-corridor door. The principal master bedroom may use multiple non-load-bearing furniture frames and a central bed, but remains non-graphic.

---

# Minecraft furnishing vocabulary

Use the block palette as a coherent visual language, not as a literal real-world equipment specification:

- beds and upholstered platforms: beds, carpet, wool, slabs, stairs and trapdoors;
- sofas and chaises: stair/slab combinations with signs or trapdoors as arms;
- side and dining tables: fences/walls with pressure plates or slabs;
- curtains and privacy screens: banners, wool, trapdoors or offset glazed partitions;
- wardrobes and closed storage: barrels, chests or decorative cabinets only when their block-entity coordinates are explicitly governed;
- warm light: lanterns, candles without uncontrolled fire, redstone lamps behind screens and low-level shroomlights;
- frames/canopies: dark fences, walls, chains and beams that remain decorative and do not obstruct required circulation;
- wash/spa: quartz/calcite/tile, cauldrons, controlled water and glass partitions;

DRAFT · NOT AS-BUILT

- acoustic separation: double walls, wool-backed panels, offset doors and buffer closets.

Every block entity requires an exact coordinate and NBT policy. Water features require a containment and rollback test. No furnishing may consume a stair landing, lift lobby, airlock, fire/escape route or two-block-clear accessible-looking path.

---

# Camera and acceptance contract

Each adults-only object must receive:

- one entrance/context image proving privacy and wayfinding;
- one interior image proving bed, lounge, storage, wash and focal furniture;
- for theater/club programs, one audience-to-stage sightline and one backroom/service image;
- for a corrected defect, matched before, defect, fix and second-pass images;
- a content review proving that no figures, anatomy, explicit imagery or depicted acts appear.

Automated and manual acceptance must fail when any of the following is true:

- the room is empty or more than half of its usable floor is an undifferentiated void;
- the only thematic evidence is a sign, red wall or bed;
- the bed is visible directly from a public corridor;
- primary seating faces a doorway or blank wall;
- storage, wash facilities, service support or normal walking clearance is missing;
- adjacent rooms are clones;
- a decorative frame blocks egress;
- a screenshot is linked by filename without exact object/camera geometry;
- a room is marked built in the database before post-state geometry, route and image verification.

DRAFT · NOT AS-BUILT

DRAFT — NOT AS-BUILT — LIVE CLOSEOUT GATES PENDING

# Northeast Data Campus, C01 East Relocation, and Parking Warehouse Expansion

**PM / engineering design review — 2026-07-28**

**State:** design basis only; no live-world mutation; no release authorization.

**Machine schedule:** northeast-datacenter-c01-relocation-engineering.json

---

## 1. Executive decision

The immutable snapshot supports a coordinated three-project plan:

1. build a fictional DM-numbered data-center campus on the dry north plateau northeast of MainStreet;
2. replace, rather than literally translate, C01 with a compact new east shell and migrate its complete program and block-entity state under rollback; and
3. after C01 is accepted and retired, extend the parking-subgrade warehouse through three separately lined east pods without touching the two support courses or the completed parking surface.

The plan deliberately rejects two seductive but unsafe shortcuts:

- the entire northeast search envelope is **not** dry; it contains aquifers, lava, caves, a dungeon, beehives, and a broad water band; and
- the obvious `+208 X` block-for-block C01 destination contains **101,675 source-water blocks**, 43 bubble columns, and two occupied beehives.

The selected occupied data-hall prisms at `y70..100` contain no water or lava. The compact C01 shell contains no source water, lava, or block entity. The warehouse east pods are fully solid, have no water or lava, and have no block entity.

---

## 2. Provenance and security boundary

The survey reads only:

- `data/worldsnap-town-expansion-complete-baseline-20260728T0315Z/region` — SHA-256 `0bb1faa61ca69724816afe682080e3a517fa974ec1300c3651e399ea03505501`; and
- `data/world-map.db`, opened read-only — SHA-256 `1bd71512b9246b67b25a7fff91cd0745eb47d089e66fa15ee7ab23a41b21a503`.

The database contained 875 features, 23 scans, and 1,881 observations at survey time. Every bound in this memo is inclusive.

The fictional DM halls borrow only public principles. They do not reproduce a real Microsoft facility, InfoBunker, continuity site, substation, access sequence, utility topology, weakness, or emergency procedure.

---

## 3. Public research converted into design rules

Microsoft's public virtual datacenter tour and security overview support a legible campus sequence, monitored operations, environmental sensing, lifecycle support, continuity planning, and least-privilege zoning. They do not justify copying the layout of a real site.

The U.S. Department of Energy's Best Practices Guide for Energy-Efficient Data Center Design drives the alternating hot/cold rack pairs, separated supply and return paths, future-load planning, electrical/cooling metering, heat-recovery placeholder, and PUE/WUE scoreboards.

NIST SP 800-53 Rev. 5 supplies high-level physical/environmental, logging, maintenance, contingency, and least-privilege control families. The FEMA Continuity Guidance Circular supports diverse communications, alternate-facility capability, tested reconstitution priorities, exercises, and sustained operations.

OSHA 1910.36 is the conservative egress baseline: permanent separated routes, remote exits, direct discharge, sufficient clear width and outward-swinging doors where occupant load requires them.

The scenic helipad and strip are controlled by design-vehicle thinking, not visual guesswork. FAA AC 150/5390-2D covers heliport planning and geometry. FAA AC 150/5300-13B requires the runway, safety area, object-free area, taxi access, drainage, and aircraft performance to be evaluated together. Until that occurs, both Minecraft elements remain scenic and non-operational.

For below-grade work, USACE EM 1110-2-2102 supports deliberate sealed joints and continuous waterstops. The FHWA road-tunnel technical manual supports a geotechnical baseline, groundwater control, risk registers, instrumentation, linings, and staged cut-and-cover work. NASA's commissioning guide supports commissioning from planning through occupancy, operation, recommissioning, and ongoing verification.

## 4.1 Northeast terrain

Candidate A, `x305..500 z-315..60`, covered 73,696 surface columns:

| Metric | Result |
|---|---|
| Top water columns | 6,580 |
| Top lava columns | 43 |
| Dry ratio | 0.910131 |
| Ground elevation | min 24; p10 62; median 68; p90 79; max 97 |

The dry north plateau at roughly `z=-256..-177` is suitable for individually censused occupied prisms. The broad water band around `z=-160..-113` is a no-build hydrology and habitat buffer.

The complete outer survey box, `[304,30,-304]..[500,112,-145]`, contains 2,616,160 cells, 17,360 source-water blocks, 80 source-lava blocks, 14,055 gravel blocks, 2,007 sand blocks, and six block entities. This is a planning envelope, never a demolition box.

The block entities are:

| Position | Type | Disposition |
|---|---|---|
| `(370,33,-158)` | cave-spider spawner | protected cave easement |
| `(382,33,-276)` | zombie spawner | protected dungeon easement |
| `(384,33,-275)` | dungeon chest | protected with inventory/NBT evidence |
| `(370,66,-158)` | beehive | wet-buffer habitat |
| `(446,76,-239)` | beehive, empty | reviewed habitat migration or hall shift |
| `(457,76,-246)` | beehive, two bees | complete NBT/bee-preserving migration or hall shift |

No detailed active database feature or known tunnel intersects the selected campus. The retired MainStreet picket-fence record touches the west boundary and must be removed from, or explicitly retained in, the future database contract.

## 4.2 C01 source

The complete source transaction survey is:

`[90,44,70]..[300,136,235]`

It contains 3,257,418 cells and 1,896 block entities:

| Block-entity class | Count |
|---|---|
| Barrels | 1,159 |
| Chiseled bookshelves | 373 |
| Beacons | 102 |
| Conduits | 90 |
| Brewing stands | 40 |
| Beds | 36 |
| Chests | 28 |
| Lecterns | 24 |
| Blast furnaces | 17 |
| Signs | 14 |
| Other | 13 |

There are 1,622 inventory-capable block entities, 12 non-empty inventories, 92 item stacks, and a total item count of 5,132. The C01 database subtree has 36 objects: 21 rooms, six custom/route objects, four landmarks, three buildings, one sidewalk, and one utility.

That is why “copy it, then delete the old one” is not an acceptable informal operation.

DRAFT — NOT AS-BUILT — LIVE CLOSEOUT GATES PENDING

A literal `+208 X` translation would occupy:

`[298,44,70]..[508,136,235]`

The destination contains:

- 101,675 source-water blocks;
- 43 bubble columns;
- 15,061 gravel blocks;
- 5,422 sand blocks; and
- occupied beehives at `(386,70,186)` and `(369,71,228)`.

That option is rejected.

---

# 5. Data-center master schedule

## 5.1 Roads

The Ravensreach connector begins on Mine Road:

```
(-72,67,-405) -> (-38,67,-405)
```

The surveyed surface search from `(-38,67,-405)` to `(304,69,-304)` found a 456-block raster route with ground elevation `y62..70`. Its review waypoints are:

```
(-38,67,-405)
(-6,70,-397)
(25,70,-388)
(56,70,-379)
(82,63,-365)
(117,65,-366)
(150,65,-361)
(182,65,-355)
(213,66,-346)
(226,65,-319)
(255,70,-308)
(304,69,-304)
```

The one-wide centerline encounters only two isolated surface-water columns, `(82,62,-365)` and `(84,62,-365)`. The design reserves a dry bridge at:

`[78,62,-369]..[90,70,-362]`

The final seven-wide corridor still requires a fresh width-buffer census; its bridge must leave the water path open. The internal seven-wide service spine runs:

```
(304,69,-304) -> (328,70,-288) -> (328,70,-216) -> (480,70,-216)
```

A separate three-wide pedestrian way parallels it.

## 5.2 DM halls

| Hall | Inclusive bounds | Water/lava | Block entities |
|---|---|---|---|
| DM10 | `[336,70,-256]..[375,100,-177]` | 0 | 0 |
| DM11 | `[384,70,-256]..[423,100,-177]` | 0 | 0 |
| DM12 | `[432,70,-256]..[471,100,-177]` | 0 | 2 beehives |

Every hall gets exactly 40 named rack rows. For pair `i=0..19`, the two rack rows occupy:

```
z = -253 + 3*i
z = -252 + 3*i
```

DRAFT — NOT AS-BUILT — LIVE CLOSEOUT GATES PENDING

`x456..468`. Each hall reserves `z=-256..-234` for front staging and `z=-194..-177` for rear electrical, cooling, circulation, and remote exits.

Vertical program:

- service plenum `y70..73`;
- white space `y74..88`; and
- roof mechanical zone `y89..100`.

The material language is restrained: structural gray concrete, smooth-stone service floors, dark rack rows, copper and cyan system accents, glazed operations rooms, and a planted forest-edge berm. Cooling and power diagrams remain fictional.

## 5.3 Separate InfoBunker-inspired facility

DM10 connects to a structurally separate underground continuity facility:

`[336,34,-256]..[395,58,-217]`

Its 60,000-cell box contains zero water, zero lava, zero block entities, and 921 gravel blocks. An eleven-block rock buffer at `y59..69` separates it from the halls; it shares no structural wall with DM10.

The lower clear level `y36..45` contains essential-record, systems-spare, staff-refuge, and sanitary-support rooms. The upper level `y47..56` contains continuity operations, communications, briefing, and controlled staging.

The normal DM10 rear connector is:

`[360,54,-256]..[367,70,-249]`

The remote protected egress is:

`[388,54,-224]..[395,70,-217]`

These are separately bulkheaded and must each pass bidirectional walking without borrowing the other path.

## 5.4 NOC, dorms, theaters, and expansion yard

| Object | Bounds | Survey result |
|---|---|---|
| Network/campus operations center | `[304,70,-256]..[319,94,-233]` | 0 fluid / 0 BE |
| Presentation theater | `[304,70,-232]..[319,94,-205]` | 0 fluid / 0 BE |
| Cinema | `[304,70,-204]..[319,94,-177]` | 0 fluid / 0 BE |
| Dormitory | `[320,70,-256]..[335,100,-177]` | 0 fluid / 0 BE |
| Expansion construction yard | `[304,70,-272]..[319,88,-257]` | 0 fluid / 0 BE |

The presentation theater has a stage at `z=-231..-228` and exactly 200 seats: ten seats across `x306..315` for 20 rows at `z=-226..-207`. Its west public door is `[304,72,-230]..[304,75,-227]`; its remote east exit is `[319,72,-208]..[319,75,-205]`.

The cinema has its own screen at `z=-203` and 200 seats at `x306..315`, `z=-198..-179`. Its west public door is `[304,72,-202]..[304,75,-199]`; its remote east exit is `[319,72,-180]..[319,75,-177]`.

They connect through a controlled rear gallery at:

`[317,72,-232]..[319,82,-177]`

They remain different rooms with separate public doors, lobbies, acoustic shells, content surfaces, and remote exits.

## 5.5 Power, equipment, aviation, and outer compound

The fictional substation and power yard is:

`[400,70,-320]..[479,91,-305]`

It contains zero water, lava, or block entity. It represents A/B feeds, metering, a battery room, transformer courts, and service access without encoding a real topology or switching weakness.

Equipment warehouses:

- `[464,70,-304]..[479,88,-265]`; and
- `[464,70,-256]..[479,88,-217]`.

Both are fluid- and block-entity-free.

DRAFT — NOT AS-BUILT — LIVE CLOSEOUT GATES PENDING

Both are hard- and block-entity-free, but neither receives an operational claim without design aircraft, safety area, object-free area, drainage, obstacle, and authority review.

Four visually prominent but non-weaponized observation/fire-watch towers are:

- `[304,70,-272]..[310,98,-266]`;
- `[490,70,-304]..[496,98,-298]`;
- `[320,70,-184]..[326,98,-178]`; and
- `[490,70,-184]..[496,98,-178]`.

---

# 6. C01 move-versus-rebuild decision

| Criterion, 5 best | Literal +208 X | New east shell + migration |
|---|---|---|
| Site dryness | 1 | 4 |
| Inventory safety | 2 | 5 |
| Rollback clarity | 2 | 5 |
| Program fidelity | 5 | 4 |
| Constructability | 1 | 4 |
| **Total** | **11** | **22** |

The recommended shell is:

`[325,0,205]..[388,45,265]`

Its 179,584 cells contain zero source water, zero lava, zero block entity, 67 flowing-water states, and 2,690 gravel blocks. The larger all-dry surface rectangle is `x301..396 z198..270`; minimum surveyed ground is y51. With the shell roof at y45, at least five cover blocks remain. The flowing-water cells still require exact neighbor-fluid isolation, compartment joints, perimeter drainage, and monitored sumps.

The restacked program is:

| Level | Clear Y | Program |
|---|---|---|
| C01-E-L4 | 2..10 | archive, bunks, communications, records, stores, fabrication |
| C01-E-L3 | 12..20 | operations theater, three conferences, briefing, service |
| C01-E-L2 | 22..32 | hangar, dispatch, maintenance, vehicle/aircraft displays |
| C01-E-L1 | 34..43 | recessed lobby, concourse, training arena, medical/decon |

The service spine is `[351,2,229]..[357,43,237]`; the primary stair is `[378,2,250]..[386,43,258]`. The public, hangar, arena, lower-loop, stair, and remote-discharge route relationships remain present even though room geometry is compacted.

The new descending road and entrance occupy:

- road envelope `[126,40,232]..[324,69,249]`;
- recessed portal `[301,38,226]..[324,64,244]`; and
- portal/shell bulkhead `[324,38,232]..[325,45,238]`.

Road centerline:

```
(126,64,245)
(180,62,245)
(240,56,245)
(292,48,245)
(301,44,240)
(301,42,236)
```

The alignment stays south of the old C01 shell until its final recessed turn. The final curve and parking-edge finish wait until source retirement.

---

# 7. Atomic C01 migration and rollback

1. Freeze snapshot and database hashes; clear entities and active builders.

DRAFT — NOT AS-BUILT — LIVE CLOSEOUT GATES PENDING

3. Build sealed destination monoliths, waterstops, drains, sumps, and temporary bulkheads before opening connections.
4. Build all rooms, stairs, and routes with placeholder empty inventories.
5. Commission dryness, lighting, exits, normal walking, concealment, room parity, and media while the source remains untouched.
6. Migrate one bounded NBT batch; compare canonical source/target hashes; accept or reverse that batch before continuing.
7. Reconcile all 1,896 block entities, 1,622 inventories, 92 item stacks, 5,132 items, and 36 C01 database objects.
8. Switch wayfinding and access to the destination while retaining the source as rollback.
9. After an explicit hold and acceptance, retire the source under exact inverse operations.
10. Complete the permanent road, restored P01 edge, and recovered warehouse pods; capture immutable post state and run independent acceptance.

Literal structure movement scores higher only for geometric fidelity. It is materially worse for dryness, partial-failure recovery, NBT safety, and constructability.

---

# 8. Full-footprint parking warehouse

The accepted west hall remains:

`[-112,50,181]..[-20,61,262]`

New dry components:

| Component | Bounds | Cells | Fluids | BE |
|---|---|---|---|---|
| Central connector | `[-19,52,217]..[19,59,225]` | 2,808 | 0 | 0 |
| East main pod | `[20,50,181]..[92,61,262]` | 71,832 | 0 | 0 |
| Recovered NE pod | `[94,50,181]..[116,61,235]` | 15,180 | 0 | 0 |
| Recovered SE pod | `[94,50,238]..[116,61,262]` | 6,900 | 0 | 0 |

Bulkheads:

- central `[19,53,217]..[20,58,225]`;
- recovered north `[93,53,208]..[94,57,214]`; and
- recovered south `[93,53,248]..[94,57,254]`.

Every pod is excavated and lined as its own pressure/water compartment. A pod must be accepted dry before one small guarded bulkhead opens. There is no single open excavation.

The structural contract is absolute:

- shell roof y61;
- y62 and y63 untouched support;
- y64 and above untouched parking; and
- every P01 bay, aisle, crosswalk, canopy, light, bicycle feature, and walking route must compare identically before and after.

The recovered pods depend on accepted C01 migration and source retirement. Those transactions must never overlap.

---

# 9. PM release gates

This design is implementation-ready only after a new release package satisfies all of the following:

1. fresh immutable same-moment snapshot and unchanged database provenance;
2. exact target, neighbor-fluid, gravity, block-entity, entity, protected feature, and active-builder preflight;
3. exact-state forward and inverse operations, independently simulated;
4. no blanket `SET`, blind terrain clear, or unmasked fill;
5. preservation of the cave, dungeon, chest, wet buffer, and habitat;
6. NBT-preserving hive migration or an approved DM12 shift;
7. 40 rack rows in every hall, clear cross aisles, rear service, and remote exits;
8. independent 200-seat presentation and 200-seat cinema tests, separate doors, and two exit routes each;
9. bidirectional DM10/InfoBunker normal connector and remote-egress tests;
10. no operational aviation claim without the FAA/design-aircraft review;
11. complete C01 block-entity, inventory, item, route, room, database, and media reconciliation before source retirement;
12. zero visible C01 concrete, at least five cover blocks, dry joints, working drainage, and two exits;
13. warehouse pod-by-pod dry acceptance before bulkhead opening and zero y62..64 change;
14. matched before/after captures, immutable post snapshot, database import, bidirectional route QA, and independent final acceptance.

DRAFT · NOT AS-BUILT

DRAFT · NOT AS-BUILT

DRAFT — NOT AS-BUILT — LIVE CLOSEOUT GATES PENDING

# Northeast Data-Center Megacampus: Public-Source Architecture Memorandum

**Document status:** researched program; not a coordinate release
**Prepared:** 2026-07-28 UTC
**Scope:** Minecraft architectural source of truth for the proposed northeast megacampus, its DM10 program, and a separate underground resilience annex inspired by InfoBunker's public descriptions
**Live-world effect:** none
**Security boundary:** public, non-tactical material only. This document deliberately omits and does not infer real access-control sequences, surveillance coverage, credentialing, network topology, utility entry points, emergency response procedures, or other non-public security details.

---

## Executive decision

The proposed program is viable, but a single undifferentiated floor holding all 40 rows would read as a warehouse, make circulation monotonous, blur operational and visitor paths, and make future expansion difficult to understand. Retain **40 rack rows in each completed data-hall building**, divided into four 10-row pods over two walk-through floors. Each floor receives ten front-to-front/back-to-back thermal pairs, contained hot aisles, cold service aisles, transverse cross-aisles, and an adjacent mechanical/electrical support gallery. The exact ten-building layout is controlled by `northeast-data-campus-coordinate-schedule.json`.

The public experience must be a separate interpretive route, not a public path through active white space. Microsoft's own public-facing solution is an immersive digital tour of a typical datacenter, organized around the server room, network, operations, mechanical systems, and innovation. The Minecraft campus should translate those topics into an architectural gallery running beside the halls, with sectional windows, cutaway mock-ups, synthetic dashboards, and a contained demonstration aisle. The real hall aisles remain operator space.

The NOC belongs in the operations/admin block, overlooking a non-sensitive central campus diagram. It does not belong in the power yard. The power yard is an outdoor service district with legible but deliberately non-tactical A/B visual bands, acoustic/landscape screening, and direct service relationships to electrical galleries.

The connected 200-seat auditorium and separate 200-seat cinema are approved as two independent rooms sharing a visitor lobby and back-of-house support. The auditorium gets a stage, backstage, green room, and lecture infrastructure. The cinema gets a real screen, projection/AV room, raked seating, and rear/side entries so the audience faces the screen—not a doorway.

The dormitory idea should become a **48-bed training and resilience lodge** on the public/staff edge of campus. Neither the reviewed Microsoft material nor InfoBunker's public disaster-recovery page supports placing residential rooms in a production data hall. InfoBunker publicly describes recovery workspaces with kitchen, break, conference, and shower facilities; that supports a resilience-support program, not an invented claim about real dormitories.

The underground facility must be a **separate fictional annex**, identified here as `IB-ANNEX`, with its own support zones and independent exits. A walkable connector from the Minecraft object `DM10` is permissible as a fictional campus convenience, but no reviewed public source establishes a real Microsoft-to-InfoBunker connection. The connector must be isolatable at both ends and must never be the annex's only route.

---

## What the public record actually establishes

### Greater Des Moines campus names and counts

The City of West Des Moines identifies the first three projects as **Mountain**, **Alluvion**, and **Osmium**. Mountain planning began in 2008, Alluvion was announced in 2014, and Osmium in 2016.
Source: City of West Des Moines, 2017

The city's fiscal-2022 report calls **Ginger East** and **Ginger West** the fourth and fifth datacenters at new city sites, each occupying roughly 130–160 acres, while Osmium construction continued.
Source: City of West Des Moines, fiscal-2022 report

The city's 2025 Community and Economic Development annual report says five Microsoft data-center campuses were built or under construction and a sixth campus was proposed. The reviewed primary material does not provide a public name for that sixth proposal.
Source: City of West Des Moines, 2025 CED annual report

Microsoft's Iowa community page confirms its Greater Des Moines presence. Its current public construction pages identify Ginger East and Ginger West and estimate their construction completion in mid-2028 and summer 2028 respectively; Microsoft also warns that construction completion does not establish operational availability.
Sources: Microsoft Local—Iowa, Ginger East update, Ginger West update

explicitly calls Ginger East "aka Microsoft DSM-14," while listing DSM-40 at a different address. A 2024 record calls DSM-44 the fifth of six **buildings on that campus**. Those identifiers must not be treated as a count of metropolitan campuses.
Sources: West Des Moines 2021 Planning and Zoning agenda, West Des Moines 2024 Planning and Zoning minutes

**Naming rule for this project:** `DM10` is an internal Minecraft object identifier only. It must not be presented as the name or replica of a real Microsoft facility. The campus should use an original fictional public name, with "Greater Des Moines precedents" confined to the research notes.

### Inside a datacenter

Microsoft's public tour organizes the datacenter story around the server room, network, operations room, mechanical area, and innovation. It says the operations room monitors critical infrastructure categories including power, cooling, network, and security. This supports the NOC program and the visitor-gallery topics, but it does not justify reproducing tactical operations.
Source: Microsoft, "We Live in the Cloud" public tour

Microsoft's public feature on the virtual tour describes a typical hot-aisle/cold-aisle arrangement: technicians work from the cold aisle; server airflow moves through the equipment; hot exhaust leaves at the rear and returns toward mechanical cooling. The same article characterizes the public experience as a digital tour. That strongly favors an isolated visitor gallery and demonstration cutaway over a public route inside active white space.
Source: Microsoft Source, virtual datacenter feature

### Rack and aisle planning

The U.S. Department of Energy's 2024 guide calls for alternating cold intake and hot exhaust aisles, front-to-back equipment airflow, back-to-back rack placement, blanking of empty rack openings, and separation of supply and return air.
Source: DOE, Best Practices Guide for Energy-Efficient Data Center Design

ASHRAE describes front-to-front and back-to-back cabinet arrangement as the first step in avoiding air mixing, then identifies hot-aisle, cold-aisle, and rack-based containment as further separation methods. ASHRAE also advises designing for future loads rather than locking the facility to a single present-day density assumption.
Source: ASHRAE Handbook, Chapter 20

These sources are operational principles, not a license to claim that Minecraft block widths are real engineering dimensions. The block dimensions below are representational design controls intended to make circulation and system relationships legible in-world.

### Public InfoBunker characteristics

InfoBunker's public overview describes a more-than-65,000-square-foot underground colocation facility with critical systems underground and redundant cooling, power, and suppression. Its HVAC page describes separated cooling systems and references ASHRAE environmental practice. Its power page describes A/B distribution and conditioned power. Its disaster-recovery page lists three 30-person recovery suites plus conference, kitchen, break, and shower facilities.
Sources: InfoBunker overview, HVAC, power, disaster recovery

Only those high-level public characteristics inform `IB-ANNEX`: underground siting, operational separation, resilient support systems, colocation/recovery rooms, and staff welfare. No real layout, system route, protection specification, or security procedure is copied or inferred.

---

# Campus master-plan program

### Campus structure

The megacampus is five connected but visibly distinct bands:

1. **Civic/visitor edge** — arrival court, visitor center, public datacenter gallery, auditorium, cinema, café, and exhibit garden.
2. **Operations spine** — admin, NOC, training labs, repair/staging, spares, loading interface, and staff commons.
3. **Data-hall field** — a phased family of 40-row buildings, each divided into four 10-row pods, with paired support galleries.
4. **Utility/service edge** — power yard, mechanical yards, maintenance road, screened service courts, and utility-reserve corridors.
5. **Resilience edge** — 48-bed lodge, future hall parcels, landscaped stormwater/meadow reserve, DM10 connector headhouse, and the separate underground `IB-ANNEX`.

These bands should be understood at a glance from the main approach. The visitor district gets a civic façade and planted court; the halls form a measured industrial rhythm; the utility district is screened but not disguised as unrelated decoration; the expansion land reads as deliberately reserved.

### Per-building 40-row standard

Each completed data-hall building contains 40 rack rows arranged as 20 thermal pairs: 20 rows on each of two walk-through floors, with four 10-row pods per building.

DRAFT · NOT AS-BUILT

| DRAFT — NOT AS-BUILT — LIVE CLOSEOUT GATES PENDING | |
|---|---|
| White-space clear envelope | 52 blocks wide × 78 blocks long × 10 blocks clear |
| Rack rows | 40 per completed building; 20 per floor |
| Row run | 64 blocks nominal, divided at a central cross-aisle |
| Cold service aisle | 3 clear blocks |
| Contained hot aisle | 2 clear blocks |
| Perimeter service aisle | 4 clear blocks |
| Transverse cross-aisles | 5 clear blocks at both ends and midpoint |
| Support gallery | 10 blocks wide along one long side |
| Visitor observation gallery | 6 clear blocks, outside the hall enclosure |

Rack fronts face cold aisles. Rack backs face contained hot aisles. Empty rack bays receive blanking-panel visual treatment. Floor and ceiling cues must show supply versus return zones without pretending to reproduce real mechanical engineering.

The two end cross-aisles and one midpoint cross-aisle interrupt the “infinite corridor” effect. Each hall has a distinct color/material identifier, visible hall number, north arrow, and “you are here” diagram. Service doors align to the support spine. The public gallery never dead-ends inside a hall.

## Public tour gallery

The gallery is a six-block-clear loop outside the operational hall enclosure. Its five stops follow Microsoft's public teaching sequence:

1. Cloud and server-room cutaway.
2. Demonstration cold aisle and contained hot-aisle section.
3. Network concept display using fictional, non-operational diagrams.
4. Operations room exhibit using synthetic status data.
5. Mechanical and cooling principles plus an innovation/future-density exhibit.

Use glazed sections only where they help the visitor read a hall. Do not turn every wall into glass. A full-size demonstration rack pair in the gallery is more informative than allowing public access to the operational rows.

## Operations and NOC

The NOC is a 32 × 26 block room within a two-story admin/operations building. It includes:

- three stepped operator rows;
- a broad synthetic status wall;
- an incident collaboration table;
- an adjacent briefing room;
- an operations-manager office;
- direct staff circulation to the central service spine;
- a visitor-side overlook that displays only the fictional campus model.

The NOC's role is to make power, cooling, network, hall state, and maintenance coordination readable. It must not expose or simulate real security controls. The power yard remains physically and architecturally separate.

## Power and mechanical yard

The power yard occupies a 90 × 54 block service parcel with:

- two visually legible, fictional A/B equipment bands;
- a maintenance loop wide enough for in-world vehicles;
- clear service aprons;
- an opaque architectural screen plus planted berm;
- separation from the auditorium, cinema, and lodge;
- utility-reserve strips leading toward future halls;
- no public entrance and no decorative pedestrian route through equipment.

The design communicates redundancy at a diagrammatic level only. It must not duplicate any real campus topology. Mechanical equipment should be grouped by the hall it serves so the campus is readable rather than scattered.

## Auditorium and cinema

The two venues share a 28 × 22 block lobby, restrooms, coat/storage space, café service, and an outdoor arrival court, but each room has independent circulation.

DRAFT NOT AS-BUILT

DRAFT — NOT AS-BUILT — LIVE CLOSEOUT GATES PENDING

- 200 seats represented as ten rows of twenty;
- 30 × 34 block audience chamber;
- 24 × 10 block stage;
- side-stage access, green room, two dressing/ready rooms, and lecture storage;
- rear and side audience entries;
- accessible front and rear seating platforms;
- acoustic vestibules at entries.

**Cinema**

- 200 seats represented as ten rows of twenty;
- 30 × 36 block chamber with raked seating;
- 22-block-wide × 10-block-high screen wall;
- dedicated projection/AV room;
- rear and side entries only;
- acoustic vestibules and a separate exit path;
- no doorway on the screen wall and no seating orientation toward an entrance.

The lobby may connect directly to the visitor gallery, but neither venue opens into the data-hall spine.

### Training and resilience lodge

Build a 64 × 42 block, two-story, 48-bed lodge at the campus edge. The first floor contains reception, two training classrooms, shared kitchen/dining, lounge, laundry, showers, and flexible team rooms. The second floor contains 24 twin rooms. A planted courtyard separates it from the service district.

Call it a “training and resilience lodge,” not a Microsoft dormitory. It is a fictional campus-support choice. Keep it outside the data-hall envelope and away from the power/mechanical yard.

### Expansion yard

Reserve two future hall parcels, each 72 × 98 blocks including support apron, plus a 16-block utility/circulation reserve between them. Until expansion, grade them as managed meadow, stormwater landscape, and a temporary training lawn. Never fill the reserve with random storage or roads that future buildings would have to erase.

The reserve should be shown on maps as `FUTURE DH-E` and `FUTURE DH-F`, not as completed capacity.

---

## Separate underground resilience annex

### Program

`IB-ANNEX` is a fictional, independent, underground resilience and recovery facility inspired only by InfoBunker's public descriptions. It is not a replica and must not carry the InfoBunker trademark as if affiliated.

The annex uses three underground levels:

- **B1 / Arrival and recovery:** reception, three 30-seat recovery suites, conference room, kitchen, break room, showers, medical/quiet room, stores, and two independent surface exits.
- **B2 / Colocation and operations:** four compact equipment rooms, repair/staging, operations desk, spares, and separated support galleries.
- **B3 / Plant and water management:** fictional A/B power rooms, cooling plant rooms, drainage collection, maintenance workshop, and a service lift/stair core.

The annex receives its own diagrammatic power, cooling, network, drainage, and exit systems. The DM10 connector is a convenience link, not a shared life-support dependency.

### DM10 connector standard

The connector is a straight or gently segmented walkable route:

- nine blocks structural width with seven blocks clear;
- six blocks clear height;
- maximum one-block rise per twelve blocks of run;
- level landing at least seven blocks long at every turn and every 36 blocks;
- non-slip floor palette and continuous lighting;
- drainage channel and low-point sump represented in the build;
- protected cable/service chase separated from the pedestrian way;
- two-stage architectural vestibule at each end;

- no staff-only segment;
- no blind intersection;
- wayfinding every 24 blocks;
- independent surface egress from both DM10 and `IB-ANNEX`.

This standard solves the walkability problem seen in earlier tunnel work while avoiding invented claims about real security features.

---

# Adjacency rules

Required adjacencies:

- visitor arrival ↔ shared theater lobby ↔ datacenter gallery;
- datacenter gallery ↔ controlled hall observation points;
- NOC ↔ admin ↔ central operations spine;
- repair/staging ↔ loading interface ↔ each hall support gallery;
- each hall ↔ its mechanical/electrical support bands;
- lodge ↔ training/admin, with a planted buffer from utilities;
- DM10 ↔ connector headhouse ↔ `IB-ANNEX`;
- future hall parcels ↔ utility reserves and service road.

Forbidden adjacencies:

- public lobby directly into operational white space;
- theater exits into the power yard;
- lodge against generator/mechanical screening;
- NOC inside the power yard;
- connector as the annex's only exit;
- shared single-point plant dependency between DM10 and the annex;
- public wayfinding that presents internal identifiers as real Microsoft facility names.

---

# Phasing

1. **Survey and coordinate release:** immutable terrain snapshot, feature/database query, parcel polygon, no-build/protected-feature overlay, grade sections, and approach-road capacity.
2. **Civic and operations core:** visitor center, gallery shell, admin/NOC, auditorium, cinema, and central service spine.
3. **Hall pair 1:** `DH-A` and `DH-B`, their support galleries, and the first power/mechanical band.
4. **Hall pair 2:** `DH-C` and `DH-D`, remaining power/mechanical band, complete gallery loop.
5. **Lodge and landscape:** resilience lodge, staff courtyard, stormwater/meadow reserve, and approach landscape.
6. **Underground annex:** annex excavation and independent exits before connector breakthrough.
7. **Connector:** build from both safe endpoints, verify slope/clearance/drainage, then connect only after both facilities have independent routes.
8. **Publication:** maps, floor plans, object-to-media crosswalk, matched screenshots, database objects, and dossier update.

---

# Release gates

No coordinate package or live build is authorized by this memo. A future release must pass:

- fresh immutable snapshot and hash;
- database-feature intersection report;
- exact coordinate bounds for every phase;
- protected-object and water/fluid census;
- non-overlap with concurrent build packages;
- before-map and matched before screenshots;
- exact-state forward and rollback operations;
- parser dry run and independent reconstruction;
- clear two-way walking route through every hall cross-aisle;
- auditorium and cinema 200-seat count;
- cinema screen present and seating facing it;
- visitor route never entering operational white space;
- lodge buffered from utility yards;
- annex has independent surface egress before connector opening;
- connector seven-block clear width, six-block clear height, and compliant gentle grade;
- object-to-media crosswalk and post-build matched captures;

DRAFT · NOT AS-BUILT

# Source hierarchy and unresolved inputs

This memo is the research/program source of truth. It is subordinate to:

1. the user's stated program and corrections;
2. a future accepted immutable world snapshot;
3. database objects and protected features in that snapshot;
4. exact guarded coordinate release and independent QA.

Coordinates remain intentionally unset. Before engineering, the PM team must provide or derive from a fresh snapshot:

- northeast campus parcel bounds;
- the existing DM10 object bounds and finished-floor elevation;
- distance and grade to the proposed annex;
- approach-road tie-in;
- water table/fluid and protected-feature census;
- conflicts with any pending town, stadium, crater-lake, or tunnel package.

Until those inputs exist, the correct status is **RESEARCHED_PROGRAM_NOT_COORDINATE_RELEASE**.

DRAFT · NOT AS-BUILT

DRAFT — NOT AS-BUILT — LIVE CLOSEOUT GATES PENDING

# Object Evidence and Second-Pass QA Standard

**Status:** binding release and documentation gate for every object built in the 2026-07-28 Town Expansion R1 session

An operation file completing without error is not final acceptance. Every individual building, infrastructure object, landscape object, underground route, and planned Phase 0 envelope needs a database identity and a matched visual second pass.

---

## Required object record

Each object receives:

- stable object ID and parent district ID;
- official display name and build status (`BUILT`, `PHASE_0`, `PLANNED`, `RESERVATION_ONLY`, or `RETAINED`);
- exact XYZ bounds and entrance/route anchors;
- purpose, complete room/feature schedule, material palette, floor levels, and capacity/count contracts;
- generator scope(s), source snapshot hash, forward operation hash, rollback hash, and deployment journal reference;
- dependencies and explicit non-connections/exclusion zones;
- protected block-entity, live-entity, fluid, terrain, and cross-scope results;
- before, first-pass after, defect, and final second-pass media IDs;
- route/access results and final acceptance decision.

---

## Matched camera method

1. Freeze a camera ID, position, yaw, pitch, field of view, target object ID, and intended visible features before deployment.
2. Capture or render the before view using that camera definition.
3. Reuse the same definition for the first-pass after image.
4. Record every visible defect against the object and camera ID.
5. Correct accepted defects through a new guarded operation/rollback package.
6. Recapture the same camera for the second pass.
7. Add detail/interior cameras only when they document a different acceptance condition; do not substitute them for the matched overview.

---

## Minimum visual set

- one matched exterior/overview before and final pair;
- one arrival/entrance view;
- one circulation/wayfinding view;
- one interior or programmed-detail view for each public floor or major underground level;
- one infrastructure/service view where relevant;
- one terrain/landscape integration view;
- additional count-verification views for seats, rooms, racks, garages, future envelopes, power yards, tower/satellite elements, or similar contracts.

---

## Second-pass checklist

- building and landscape sit naturally on the surveyed terrain;
- no exposed floating slab, raw cut wall, accidental water leak, dry lake gap, or unplanned void;
- roads, walks, doors, stairs, landings, lifts, parking, loading, and exits actually connect;
- major rooms are easy to distinguish and audiences face a real stage/screen;
- no seat, rack, bed, vehicle, tree, billboard, or decorative block obstructs a route or entrance;
- façades, roofs, rear/service elevations, basements, and support rooms have deliberate detail rather than a finished front and empty back;
- district spacing and sightlines make the next destination understandable;
- adult venues remain architectural and non-graphic;
- planned/Phase 0 objects cannot be mistaken for completed buildings;
- every database object has its own usable media, not a loosely related district screenshot.

DRAFT — NOT AS-BUILT

DRAFT — NOT AS-BUILT — LIVE CLOSEOUT GATES PENDING

## Acceptance outputs

The database object is `FINAL_ACCEPTED` only when:

- the guarded deployment and rollback records verify;
- post-build world state matches the target;
- all route, entity, fluid, geometry, and count checks pass;
- the first visual pass has a closed defect log;
- matched second-pass media exists and is nonblank;
- the PDF, Sites object page, Box manifest, and object/media crosswalk all point to the same hashes.

DRAFT · NOT AS-BUILT

DRAFT — NOT AS-BUILT — LIVE CLOSEOUT GATES PENDING

# Observatory Mega-Estate and Inactive Portal Gallery

**Decision:** preserve the current observatory and penthouse as the crown of a coherent owner estate, but give them an independent structural podium before the old C01 complex is decommissioned.
**Estate reservation:** `x145..275, y75..150, z100..225`
**Release status:** planning only; no live-world mutation.

---

## Existing condition and critical dependency

The database places `OBS-S01` at `x175..235, y119..136, z137..182` and `APT-S01` at `x178..225, y105..114, z139..180`. Both sit over the old C01 envelope, which reaches `y105`. They cannot be treated as independent buildings while the bunker team removes their support.

The estate therefore begins with a retained independent podium/foundation package. P01 ends at `x125`, while the estate begins at `x145`; preserving the estate does not consume the recovered lot. The broad `y75..104` study volume is fluid-free, but contains 784 existing block entities, mainly C01/estate fixtures and inventory. Any broad clear is prohibited. Every container and NBT object gets an explicit preserve, move, or retire record.

---

## Architectural response

Keep the existing white symmetrical Art Deco observatory crown, central copper dome and twin smaller domes. Add lower flanking wings rather than a competing tower:

- west: guest suites, conservatory, art gallery and owner offices;
- east: grand library, music salon, dining room, two kitchens and family rooms;
- south: arcaded arrival court, porte-cochère, sculpture and terraces;
- north: night-sky terrace and a clear approach to the domes;
- outer east: a small five-dish sculptural radio-astronomy garden;
- southwest: pool/spa/gym winter court.

The National Park Service's Vassar Observatory record describes a dome-centered observatory whose telescope rests on massive independent stone piers. That is a useful structural expression: the telescope/dome should read as supported independently from occupied rooms. NPS, Vassar College Observatory

The National Radio Astronomy Observatory presents the VLA as an array of dish antennas accompanied by a visitor center, interpretive exhibits and a signed outdoor walk. The estate's small dish garden uses that public interpretive relationship, not a copy of VLA geometry or operations. NRAO, Visit the Very Large Array, NRAO VLA virtual tour

---

## Expanded shelter

Place the new shelter east of the inventory-dense old storage rooms at `x240..270, y93..104, z170..215`; the broader surveyed volume there has zero fluids and zero block entities. Program it with a safe room, independent air/utility room, stores, sanitation, communications, medical/quiet room and two remote egress routes.

FEMA's public safe-room guidance identifies standby power, protected critical support systems, ventilation, lighting, egress, accessibility, emergency provisions and operations/maintenance as coordinated planning topics. Those categories guide the Minecraft room program; this document does not claim real-world code compliance. FEMA P-361, FEMA safe-room design criteria advisory

---

## Hidden inactive portal gallery

The owner-library's large armillary sphere and constellation bookcase is the fun-to-find architectural trigger. Aligning its celestial model reveals a five-wide descending gallery. This is theatrical discovery, not a description of a real security system.

The underground destination hall has a 21-by-21-block central circulation room, a district compass/floor mosaic, status directory and separately bounded destination rooms for:

- MainStreet America;
- Raven Rock;
- Ravensreach/Ravensgate civic;

DRAFT — NOT AS-BUILT — LIVE CLOSEOUT GATES PENDING

- Panorama Oasis;
- Northeast data campus;
- two scalable spare destinations.

Every room has its own district identity, floor map, return arrow, inactive frame and status sign. Uncommissioned rooms get two sequential metal doors and an `OFFLINE` sign.

No active portal block is allowed. Specifically, the release must prove zero `nether_portal`, `end_portal`, `end_gateway`, active-frame states, or command mechanisms that create them. These are walkable architectural galleries and map rooms only. The portal complex cannot connect to C01, the estate shelter, Raven Rock, Ravensgate, the library–Guild tunnel, natural caves or any other tunnel network.

---

## Acceptance

The estate passes only when its support is independent of the decommissioned C01 shell, every existing NBT object is accounted for, the shelter's two routes and utilities are commissioned, every destination room is safely walkable, and a block census proves all frames remain inactive.

DRAFT — NOT AS-BUILT — LIVE CLOSEOUT GATES PENDING

# Pavilion East Grounds and Ravensgate Underground Separation

**Controlling correction:** Ravensgate does not expand. Its recorded district boundary remains `x-148..-64, z-562..-420`. The new work expands the existing civic pavilion ensemble and outdoor grounds above/east of Ravensgate to the flat-land/tree-line transition at `x20`.
**Release status:** planning only; no live mutation.

---

## Design decision

The civic composition remains a three-part sequence:

`expanded library → Russian-referenced open civic pavilion/Garth → Great Guild Hall`

The east grounds then continue around the Guild Hall rather than pretending the building is isolated on empty grass. North and south reflecting pools frame the Guild Hall. A Buckingham-Fountain-inspired centerpiece anchors the north garden. A small Lincoln-Memorial-inspired monument terminates the east axis. An allée, flowers, banners, benches, lights and statuary make the tree-line edge deliberate.

The pavilion is not a glass box and is not a literal copy of a Russian monument. It is an original symmetrical masonry-and-timber arcade with a steep metal roof, patterned soffit, central lantern/cupola and integrated sculpture. It remains visually open enough that the library and Guild Hall read as the two bookends.

---

## Public-source design basis

The National Park Service describes the Lincoln Memorial landscape as an axial composition in which the memorial, reflecting pool, tree-lined walks and reciprocal vistas reinforce one another. That is the useful lesson here: a monument needs a deliberate approach and a long view, not an object dropped into leftover land. NPS, Views and Vistas of the Lincoln Memorial Cultural Landscape

NPS also records the memorial's raised approach, plaza, monumental urns and Doric colonnade. The Minecraft monument translates the sequence—pool/approach, steps and ramp, terrace, colonnade, central figure—without copying inscriptions or representing itself as the real memorial. NPS, Lincoln Memorial Exterior Features

The Chicago Park District describes Buckingham Fountain as a major sculptural fountain with periodic large water displays and night lighting. Chicago's landmark record identifies it as the centerpiece of a Beaux-Arts garden. Those sources support a strong central basin, cardinal sculpture, a hierarchical jet composition and an evening-light identity. Chicago Park District, City of Chicago Landmark record

For the ceremonial station room, Kyiv's official city guide describes Lukianivska as a three-vault station with pylons, an island platform and multiple underground halls. Its Holosiivska entry describes a low-ceiling hall made visually taller with lighting, a central island platform, white marble, gray granite and green smalt. The tiny Minecraft chamber borrows those public architectural cues while remaining a stationary library room with no rail or network connection. Kyiv City Guide, Lukianivska, Kyiv City Guide, Holosiivska

The Library of Congress describes collection storage as a coordinated program of storage planning, inventory control, preservation, security and accessibility. That supports cataloged closed stacks, controlled service points and conservation support in the two lower archives. Library of Congress, Collections Management Division

---

## Restricted underground decision

Treat `x-148..-64, y-64..35, z-562..-420` as the frozen Ravensgate restricted underground exclusion. The snapshot census found 36,192 fluid cells, 87,975 air cells, 14,124 gravity-sensitive cells, a spawner and two chests. That is not an invitation to explore. It is evidence that the volume contains caves, water and generated features and should be protected as one restricted object until a dedicated survey proves otherwise.

No civilian/library/Guild/portal tunnel may enter it. `y36..43` is a hard vertical no-penetration buffer. A broader horizontal review buffer applies through `y43`. No access point is authorized in this package. The reserved south-edge access study is sealed and exists only to prevent later teams from improvising an entrance. Any future authorized access gets a named coordinate package and two sequential metal-door vestibules.

The surface grounds may cross above the restricted footprint because their occupied surfaces begin at `y67`, but foundations, basins and utilities still stop above the vertical buffer. Surface expansion does not broaden underground access.

DRAFT — NOT AS-BUILT — LIVE CLOSEOUT GATES PENDING

## Isolated library-guild hall tunnel

The dry corridor at `x-110..-60, y58..64, z-442..-436` has zero fluids and zero gravity cells. Three dry rooms branch only to its south:

- restricted/challenged-materials archive;
- non-explicit private adult-literature archive;
- Ukrainian-metro-inspired ceremonial station chamber.

This is one isolated building-to-building passage with exactly two parent endpoints. It cannot connect to Raven Rock, C01, natural caves, the owner-estate portal gallery, utilities, or any future tunnel network. The station room is theatrical architecture, not transit.

---

# Acceptance

No release is acceptable until the Ravensgate exclusion and buffers exist as protected 3D database objects, all surface water bodies pass closed-basin testing, the secret corridor remains network-isolated, and matched sections show the required vertical separation.

# Town Expansion Architecture and Siting Survey

Status: **survey/design basis; not a physical release**
Date: 2026-07-28 UTC
Source state: accepted immutable Wave 2 post snapshot `d05ac7822795eff03340e46695a6f3accbdffdf82d11559d857e17b4d1962999`

---

## Executive decision

The program is buildable, but not as one undifferentiated construction package. The recommended sequence is:

1. complete the Moot penthouse as a refit inside its recorded envelope;
2. remove the Amsterdam terrace only after an exact protected-cell comparison, then build the bowed longhouse and court;
3. treat the library expansion as a stepped/cantilevered civic project because the four-times footprint is 29 percent water;
4. build the Guild Hall on the dry east parcel as the pavilion's terminating civic anchor;
5. form Westlight as a stadium-island district with a porous pile-supported pier, crater lake, westward paired parks and continuous public green loop;
6. terrace the housing rather than flattening its steep parcels;
7. use the surveyed dry MainStreet warehouse core only; and
8. hold the warehouse vehicle ramp until a watertight west portal or an alternate surface portal is designed.

No live world, database, Sites or Box state was changed by this survey.

---

## 1. Ravensreach civic ensemble

### 1.1 Moot penthouse

The database records the penthouse at x `-99..-71`, y `87..98`, z `-391..-367`. The current south oblique and block census show a complete but visually blunt top volume: it reads as a rectangular cap rather than the paid-for culmination of the nine-floor Moot stack.

Keep the footprint and stair landing. Recompose the shell as a symmetrical great-room suite with a recessed central lantern, four roof corners, a deep south loggia, private dining/library rooms behind the great room and a continuous parapet walk. The lift/stair core remains the fixed datum. The release must be an exact-cell refit with matched before/after cameras; it must not demolish the floor support at y=87.

### 1.2 Period longhouse and courtyard

The six Amsterdam houses occupy x `-104..-67`, z `-352..-346` and overlap the broad Moot database envelope. That overlap is a stop condition until the next snapshot identifies every exact shared cell.

The replacement envelope is x `-104..-75`, y `67..88`, z `-356..-342`, with the court at x `-105..-67`, z `-365..-357`. The long axis runs east-west. Use bowed long walls, a high timber roof, opposing long-wall doors, gable service doors, a central double-height hearth hall, west service bay and east lodging/work bay. The court needs a well, kitchen garden, timber gallery, covered work edge and a direct civic-square threshold.

That translation follows Denmark's National Museum description of Viking longhouses—bowed long walls, gable and long-wall entrances, and houses grouped around courts—without copying a reconstructed building: National Museum of Denmark, Viking homes and the museum's Trelleborg district plan.

### 1.3 Library, terrace and pavilion

The current library floor plate is 782 cells. The proposed x `-178..-111`, z `-448..-403` plate is exactly 3,128 cells, four times the recorded plate. It is not a flat-building site: 904 of 3,128 surface columns are water, and support elevations run from a p10 of 62 to a p90 of 98.

The accepted concept therefore uses three structural attitudes:

- retain and refit the present six-level library as the east reading stack;
- step new closed stacks and reading rooms into the high west terrain; and
- bridge/cantilever public rooms over the low/wet middle with visible piers.

The two-level concrete walk-out terrace occupies x `-110..-96`, z `-447..-433`, with support/landings at y `75`, `71` and `67`. Use a broad accessible switchback beside the ceremonial stairs. Do not resurrect the old glass pavilion: it was deliberately removed. The current civic middle is the Ravensgate Garth, Loggia, Stoa, campanile and belvedere. The new terrace must connect to that as-built ensemble.

DRAFT — NOT AS-BUILT — LIVE CLOSEOUT GATES PENDING

The preferred dry parcel is x `-59..-7`, z `-462..-418`; its surface is predominantly y `63..67` and has no surveyed water columns. Floors are y `53`, `60`, `67`, `75` and `83`: two basements and three public/residential stories.

The pavilion/Garth remains the middle hinge: library on the west, Guild Hall on the east. The hall receives four kitchens, dormitories, living rooms, lecture hall, theater, dance hall and bar. Its architecture should spend money on craft, not merely scale: a stone plinth, deep carved entry, layered roof, lanterns, guild heraldry, gallery stairs, acoustic ceilings and visibly different public, resident and service routes. The detailed room schedule and bar research are in `guild-hall-and-bar-source-of-truth.md` and `guild-hall-program.json`.

The Library of Congress is a useful public precedent for the way a single institution can layer reading, ceremonial and event rooms around a legible central composition: Jefferson Building floor plans and event facilities.

### 1.5 Town infill rule

Fill blocks, not leftover rectangles. Every infill parcel must have a public front door, rear/service address, courtyard or garden role, roof hierarchy and database ID. Preserve a readable hierarchy of civic frontage, lane, mews and service edge. The UK National Model Design Code supports this block/street discipline, defined building lines, active frontages and context-specific movement hierarchy: National Model Design Code Part 2.

---

## 2. Stadium approach, oasis and bunker

Widen the Ravensgate–Westlight approach to a nine-block section with seven clear travel blocks and distinct shoulders/footways. Keep the existing keyframes in `coordinate-schedule.json`; do not straighten it through terrain. Use billboard clusters only at decision points, keep sight triangles open and never let a sign replace the absent stadium screen.

The oasis parcel x `-248..-210`, z `-510..-482` is dry. Make it a true halfway service court: fuel/charging canopy, food hall, restrooms, terrace, maintenance yard, signed return movements and a landscape basin. Illinois Tollway's oasis program is the operational precedent: Illinois Tollway Oases. Road signs and billboard placement should use the current FHWA MUTCD as the public source of truth.

The GTA-like mini-bunker remains a spatial mood reference only. Its approved envelope moves west to x `-252..-220`, z `-548..-515`, which eliminates the 52 surface-water columns present in the earlier eastern envelope. Conceal it under natural landform, give it a dogleg portal and keep the service apron subordinate to the oasis. Do not copy proprietary GTA geometry, branding or missions.

---

## 3. Westlight island, pier and crater

The stadium throat at x `-356..-353`, z `-506..-471` remains exactly four blocks wide; preserve it. The new primary pedestrian mall extends north in x `-362..-347`, z `-470..-318`, crossed by a secondary mall at z `-379..-364`. The pier envelope x `-428..-274`, z `-445..-318` is zoning, not a solid platform.

The brew barn, seven shophouses and ferry building need pile-and-cap retrofits because their existing stone pads meet substantial water edges. Keep open-water slots between deck ribbons. The Skiff House's existing dark-oak piles are the local construction precedent. Provide two independent shore returns and continuous guarded public circulation. NYC's rules usefully demand continuity and a clear waterfront path: NYC waterfront public access continuity and pier circulation. FEMA's public coastal-construction guidance supports open/pile foundations rather than broad fill in exposed wet areas: FEMA Coastal Construction Manual, Volume II.

The crater lake is a bounded fill concept, not an executable fill command. Its low dry component is x `-491..-447`, z `-620..-556`, 1,507 columns with support y `46..61`. The modeled water datum is block y=62. The gross exact fill inventory is 12,288 cells: 11,746 air, 523 grass blocks and 19 short grass. Fresh closed-basin, cave, block-entity and neighbor-fluid proofs are mandatory.

---

## 4. Paired parks and crater housing

The two parks face each other across the westward boulevard:

- dry park x `-640..-520`, z `-550..-480`; and
- water park x `-640..-520`, z `-462..-360`.

The dry park is extremely hilly (median support y=76, p90=99), so its signature coaster and paths follow the slope. The water park is 65.6 percent water at the sample grid. It requires pile decks and self-contained wave/lazy-river vessels; natural water is landscape, never a substituted pool.

Adventureland/Adventure Bay and Worlds of Fun/Oceans of Fun demonstrate only the transferable operating pattern: adjacent dry/water parks, a coordinated arrival and an internal relationship. The plan does not reproduce their names, marks, attraction forms or layouts: Adventureland, Adventure Bay, and Worlds of Fun. Ride systems require a licensed design against the current applicable standard; ASTM publishes the scope of F2291, amusement ride design, and the UK HSE publishes operational design guidance in HSG175.

DRAFT — NOT AS-BUILT — LIVE CLOSEOUT GATES PENDING

fieldstone bases, shingle wall planes, broad porches, gables and dormers. Keep the entire lake edge public. The NPS description of Sagamore Hill supports the Shingle/Colonial Revival vocabulary without licensing a copy: Sagamore Hill architecture.

## 5. Southwest housing and staff connection

The north housing parcel, central court and south housing parcel are all dry, but their slopes are material. Project A is x `-306..-259`, z `-298..-275`; the shared court is z `-274..-259`; Project B is z `-258..-235`. Step both projects around the court at design support y=82. Give every home a dignified address, daylit stair and visible route to the court. Keep refuse/loading outside the social center.

HUD's public case studies show transferable features: mixed-use/shared-court organization, visible common space and strong resident amenities: Five88, Bear River Cottages, and Via Verde.

The provisional dry contour staff route begins at `(-111,68,-332)`, reaches MainStreet West Lane at `(-82,65,-219)`, then follows the accepted lane north to B01. The attached lounge x `-94..-73`, z `90..121` connects to B01's west wall. It contains breakroom, kitchen, lockers/showers, quiet room and dispatch. A fresh five-block-wide halo scan and both-direction normal-walk test are still required.

## 6. Attached MainStreet garages

The separate schedule covers all 18 houses. Every garage is attached. H01 and H07 receive six bays; H03, H08, H09 and H10 receive four; the remaining houses receive two. Vertical/side attachments at H07, H08, H09, C02, C03 and C05 carry the highest collision risk. Do not execute the old detached-garage layouts as a substitute.

## 7. MainStreet underground warehouse

The full requested box x `-118..88`, y `35..60`, z `180..296` is rejected as one excavation. It contains 10,958 source-water cells, 36 source-lava cells, additional flowing fluids, bubble columns, wet vegetation and magma. Its north edge also intersects the protected RR-T2b route envelope.

The verified dry core is x `32..88`, y `40..60`, z `200..296`: 116,109 cells and zero fluid cells. At 5,529 cells per plate it can support one meaningful high-bay hall with receiving, racks, vehicle/RV storage, mechanical plant, office/mezzanine, cafeteria/kitchen and private adult staff wellness/relief rooms. The latter are intentionally non-graphic and separated by a privacy vestibule, independent exhaust and wash support.

The user-requested west ramp opposite the C01 portal is not presently releaseable. A direct 1:4 ramp crosses 156 fluid cells, 290 unique fluid-halo cells and 293 gravity-sensitive cells. An adaptive nine-block-wide search across x `-160..-100` finds no continuous dry route beyond z=267. A dry deep transfer route exists at y=40, but it does not solve the wet rise to the surface. Choose between:

1. a separately engineered watertight/cofferdam west portal;
2. a dry surface portal on the east/central parking side with a west-facing architectural expression; or
3. a reduced non-vehicle west shaft plus a remote dry vehicle ramp.

WBDG recommends high bays, flexible storage, marked handling routes, separation of receiving/shipping, flat durable floors, ventilation and fire protection: Whole Building Design Guide, Warehouse. OSHA requires sufficient safe mechanical-handling clearances and marked, unobstructed aisles: 29 CFR 1910.176. At least two remote exits, clear discharge and illuminated, unobstructed routes are the baseline: 29 CFR 1910.36 and 29 CFR 1910.37. The CDC/NIOSH building-air guide specifically calls for local exhaust in an underground parking garage: Building Air Quality. Kitchen and employee-storage separation should be resolved against the current FDA Food Code.

## 8. Release gates

Every physical package requires a new immutable snapshot, exact source guards, inverse rollback, block-entity/inventory census, protected-feature comparison, entity/player clearance, fixed transaction order, post snapshot, independent QA, normal-walk tests and matched before/after evidence. The current schedules are planning coordinates; none authorizes a bulk `SET`, live database import or replay of an accepted release.

## Artifact index

- `coordinate-schedule.json` — Ravensreach civic, boulevard, oasis and bunker siting.
- `mainstreet-attached-garage-coordinate-schedule.json` — all 18 attached garages.
- `westlight-waterfront-coordinate-schedule.json` — stadium-island, pier and crater.
- `westward-parks-housing-workforce-coordinate-schedule.json` — paired parks, housing, staff path and lounge.
- `mainstreet-underground-warehouse-coordinate-schedule.json` — warehouse feasibility, program and rejected/accepted envelopes.
- `evidence/` — read-only current-condition maps and block/parcel censuses.

## Blocking offline findings

- None.

## Live-only follow-up gates

- **TE-LIVE-ROUTE-01:** Run a no-dig/no-tower Mineflayer walker over each representative route in both directions against the same live save state. Status: `PENDING`.
- **TE-LIVE-ROUTE-02:** Exercise powered iron-door, airlock and access-control interactions without breaking blocks. Status: `PENDING`.
- **TE-LIVE-ROUTE-03:** Observe dynamic entity collision and crowding at C01, civic, Westlight, warehouse, data-district and observatory thresholds. Status: `PENDING`.
- **TE-LIVE-ROUTE-04:** Complete the separately controlled citizen commute live walk before enabling resident shifts. Status: `PENDING`.

This PASS accepts immutable-snapshot geometry only. It does not claim a live Mineflayer traversal, powered iron-door controls, dynamic entity clearance, or citizen-shift activation.

## Blocking offline findings

- None.

## Live-only follow-up gates

- **TE-LIVE-ROUTE-01:** Run a no-dig/no-tower Mineflayer walker over each representative route in both directions against the same live save state. Status: `PENDING`.
- **TE-LIVE-ROUTE-02:** Exercise powered iron-door, airlock and access-control interactions without breaking blocks. Status: `PENDING`.
- **TE-LIVE-ROUTE-03:** Observe dynamic entity collision and crowding at C01, civic, Westlight, warehouse, data-district and observatory thresholds. Status: `PENDING`.
- **TE-LIVE-ROUTE-04:** Complete the separately controlled citizen commute live walk before enabling resident shifts. Status: `PENDING`.

This PASS proves only the exact guarded offline projection. It is not as-built evidence and cannot satisfy final acceptance before execution, fresh post snapshot, route rerun, live controls, and entity clearance.

DRAFT · NOT AS-BUILT

DRAFT — NOT AS-BUILT — LIVE CLOSEOUT GATES PENDING

# Town Expansion R1 accessibility repair

Status: **OFFLINE_PROJECTED_ROUTE_PASS_NOT_EXECUTED**

This is an offline-only exact-guarded repair design. It has not been executed against the live world.

- Immutable source snapshot: `0a74e06adf1b0520ad24433a459346f1d65105e40b0c92da222b94b356db3218`
- Canonical Town Expansion package: `1a10954b1ae6ae702dcc01cd92d39adbb3820e3feff5461f3caa1283a578b896`
- Forward operations: **1526**
- Exact rollback operations: **1526**
- Unchanged source/replacement candidates omitted: **1914**
- Exact-text no-ops omitted: **1910**
- Property-order-only semantic no-ops omitted: **4**
- Block-entity targets: **0**
- Ravensgate review-buffer targets: **0**
- Active portal blocks added: **0**
- Ladders added: **0**

## Eight-route diagnosis

| Route | Classification | Guarded cells | Baseline gap |
|---|---|---|---|
| TE-ROUTE-C01-MOUNTAIN-PORTAL-L1 | MANIFEST_WAYPOINT_ERROR | 0 | multi-component |
| TE-ROUTE-C01-PUBLIC-VERTICAL | REAL_INACCESSIBLE_BUILD | 175 | 15 |
| TE-ROUTE-C01-OWNER-VERTICAL | REAL_INACCESSIBLE_BUILD | 366 | 28 |
| TE-ROUTE-WESTLIGHT-VENUE-CORE | REAL_INACCESSIBLE_BUILD | 350 | multi-component |
| TE-ROUTE-MAINSTREET-WAREHOUSE-DRIVE-HALL | REAL_INACCESSIBLE_BUILD | 54 | 2 |
| TE-ROUTE-MAINSTREET-WAREHOUSE-EAST-WINGS | REAL_INACCESSIBLE_BUILD | 31 | multi-component |
| TE-ROUTE-OBSERVATORY-ESTATE-PUBLIC | REAL_INACCESSIBLE_BUILD | 268 | multi-component |
| TE-ROUTE-OBSERVATORY-PORTAL-HUB | REAL_INACCESSIBLE_BUILD | 282 | multi-component |

The C01 mountain-portal failure is a contract error, not a request to reopen the retired x684 portal. The corrected manifest points at the active five-level C01 garage road cut. Every other failure is a physical disconnect in the immutable post snapshot and receives a bounded repair.

## Projected route result

- Status: **PASS**
- Acceptance class: `OFFLINE_PROJECTED_REPAIR_GEOMETRY_ACCEPTED_NOT_AS_BUILT`
- Routes: **22/22**
- Directions: **44/44**
- Isolation assertions: **4/4**
- Remaining route blockers: **0**

The projection does not satisfy final/as-built acceptance. A later authorized release still requires a fresh exact preflight, frozen live entity gate, strict-noop guarded execution, immutable post snapshot, this same full route gate against that post snapshot, powered-door checks, and live no-dig/no-tower Mineflayer walks.

DRAFT — NOT AS-BUILT

DRAFT — NOT AS-BUILT — LIVE CLOSEOUT GATES PENDING

# Town Expansion R1 Database Closeout

Status: `PASS_DATABASE_IMPORTED_AND_CENSUS_VERIFIED`

This is the database boundary for the accepted Town Expansion R1 release and its ordered supplemental chain. The guarded importer committed the accepted registry to `data/world-map.db`; it did not mutate the live world. The independent publication census then reopened the database read-only and passed every object, relationship, observation, media, integrity, and foreign-key gate.

The accepted commit report is:

`data/world-review/town-expansion-r1-database-closeout-2026-07-28.json`

The independent publication report is:

`data/world-review/town-expansion-r1-database-publication-report-2026-07-28.json`

The database SHA-256 after commit is `71876a7ecf73e90475a9b5047938e14f39ea0a20381dea8c5286582059f95f8a`. The pre-import database and WAL sidecars are preserved under `data/backups/world-map-town-expansion-preimport-20260728T211037376Z.db*`.

---

## Canonical registry

The importer consumes:

`data/exports/town-expansion-media-2026-07-28/object-media-database-crosswalk.json`

Its normative shape is:

`docs/redevelopment/2026-07-28-town-expansion/town-expansion-database-registry.schema.json`

Counts are dynamic and must equal the registry arrays. The accepted registry contains 340 exact objects, 1,178 declared capture files, and 13 map pairs. Those figures are not hard-coded into the importer.

Each imported object must provide its exact external ID, bounds, source provenance, requested state, physical as-built claim, database lookup contract, and paired media IDs. Map-only IDs are evidence, not database features. Relationships come only from explicit `parentExternalId` values; filenames, names, proximity, and overlapping bounds never fabricate a relationship.

---

## Fail-closed evidence gates

The guarded importer refuses to continue unless all of the following agree:

- The canonical registry and generator/design report.
- The exact forward operation package.
- A committed, strict-noop, one-package atomic transaction.
- A byte-for-byte matching immutable post-release Anvil snapshot.
- A `PASS` and `ACCEPTED` post-release QA report with all eight required gates.
- A final `PASS` media QA report tied to that registry, forward package, and post snapshot.
- Every declared pass-one/pass-two image, including file hash, dimensions, camera geometry, shot ID, object ID, evidence pass, and distinct output file.
- A structurally compatible, integrity-clean, foreign-key-clean database.

An object with `plannedOnly: true` is refused. A future program may be imported only when the registry certifies an actually built marker, wall, construction staging treatment, or reserved-parcel treatment. Its database attributes retain the future program state and explicitly state that the broader requested program is not complete.

---

## Accepted dry-run

Run this only after the final post-release snapshot, transaction ledger, media QA, and post-release QA exist:

DRAFT — NOT AS-BUILT — LIVE CLOSEOUT GATES PENDING

```
  --qa data/world-review/town-expansion-r1-post-release-qa-2026-07-28.json \
  --post <accepted-immutable-post-region-directory> \
  --transaction <committed-town-expansion-transaction-ledger.json> \
  --media-report data/world-review/town-expansion-r1-post-release-media-2026-07-28.json \
  --out data/world-review/town-expansion-r1-database-closeout-2026-07-28.json
```

Dry-run is the default. The accepted dry-run report is `data/world-review/town-expansion-r1-database-closeout-dry-run-2026-07-28.json`. It opened the database read-only and emitted `PASS_DRY_RUN`, the exact pre-import database hash, the evidence hashes, and the create/update plan. It does not create a backup or write database rows.

---

# Committed transaction

Only after reviewing a successful dry-run may an operator repeat the command with both:

```
--commit --expected-db-sha256 <database.sha256 from that dry-run>
```

The importer rechecks the database hash, creates an integrity-checked SQLite backup, and upserts all features, one deterministic accepted scan, and one observation per object inside one `IMMEDIATE` transaction. Any exception rolls back every logical row. Commit success is `PASS_DATABASE_IMPORTED`; idempotent repetition updates the same exact feature, scan, and observation identities.

The commit inserted 340 features, one deterministic accepted scan, and 340 observations inside one immediate transaction. Database counts advanced from 875 to 1,215 features, 23 to 24 scans, and 1,881 to 2,221 observations. The closeout report exposes:

- `evidence.postSnapshotSha256`
- `evidence.forwardSha256`
- `evidence.crosswalkSha256`
- `evidence.mediaQaSha256`
- `evidence.postReleaseQaSha256`
- `evidence.transactionSha256`
- `database.sha256` and database integrity/foreign-key results

---

# Read-only publication census

After a successful import, generate the independent registry-to-database census:

```
node scripts/report_town_expansion_database.mjs \
  --registry data/exports/town-expansion-media-2026-07-28/object-media-database-crosswalk.json \
  --database data/world-map.db \
  --out data/world-review/town-expansion-r1-database-publication-report-2026-07-28.json
```

It is read-only. The accepted census reports exactly one deterministic scan, 340 features, 340 observations, and 1,152 exact media relations. `PASS` requires exactly one accepted deterministic scan, every registry object and observation, no extra project features, exact explicit parents, complete requested-versus-as-built truth, complete exact media relations, a common evidence chain, and clean SQLite integrity/foreign keys. It publishes the same evidence hash aliases plus `database.sha256`.

The first census attempt failed closed because it required in-registry parent external IDs to be globally unique across historical projects. That rejected report is preserved at `data/world-review/town-expansion-r1-database-publication-report-parent-scope-contract-fail-20260728T2110Z.json`. The corrected census scopes in-registry parents to the accepted project and requires global uniqueness only for declared external parents.

---

# Verification

The isolated fixture suite exercises dry-run immutability, commit, idempotent upsert, exact media relations, independent database census, injected mid-transaction rollback, planned-only refusal, and media-hash drift refusal:

```
npx vitest run test/build/importTownExpansionRelease.test.ts
```

The test database, snapshots, transaction, registry, QA, and media files are all temporary fixtures. The suite does not mutate the live world or live database.

DRAFT — NOT AS-BUILT — LIVE CLOSEOUT GATES PENDING

# Town Expansion global cross-scope ownership and interface gate

**Status:** GLOBAL_CROSS_SCOPE_INTERFACE_GATE_PASS **Generated:** 2026-07-28T15:04:42.978Z **Mode:** offline model audit; no database, snapshot, or live-world mutation

## Result

- Final modeled target cells: 6,328,504
- Canonical ownership refactors: 79
- Exact reviewed interfaces: 13
- Unreviewed interfaces: 0

## Manager Vale exact module ownership

- Module status: PASS_OFFLINE_INTEGRATION_READY_LIVE_GATES_PENDING
- Exact one-cell targets: 37,584
- Unique target cells: 37,584
- Shared-model target intersections: 0
- Cottages / attached garage bays / rooms: 5 / 24 / 55
- Furnishing groups / cameras: 406 / 45
- Protected block-entity copies: 41
- Source retirement included: false
- Exact owner: `scripts/manager_vale_cottage_compiler.mjs#compileManagerValeCottages`

## Canonical ownership

Publication scopes remain independently cataloged. The assignments below only remove duplicate physical ownership inside one designed road, landscape, house, or park program.

- Component-set SHA-256: `e987ffd7dc6c83627bc7b390c8ed29626ddb33aa4baca71ee2c800d81ab9561b`
- Reason: One continuous three-column ceremonial-gallery attachment is the sole Gilded Raven owner-route arrival into the separately owned observatory estate.
- Geometry evidence: worker-town-gilded-raven-theater-owner-tunnel-coordinate-schedule.json documents one estate interface; the global audit binds the exact changed-cell subset.

## TE-IA-OUTER-COMPOUND -> TE-IA-HOLDOUT-HOME-ROAD

- Exact cells: 159
- Transition events: 159
- Bounds: `{"minX":557,"minY":74,"minZ":-222,"maxX":563,"maxY":74,"maxZ":-187}`
- Sorted cell-set SHA-256: `e4b7b8cab03ea5d480da3255d09bd4ad0c5b531dffcf562d75894fede84d1dff`
- Connected components: 2 (largest 135 cells)
- Component-set SHA-256: `4903b70f9be55ae46ce8d572177085a2eaebd81b7015baeae730c852f63401bc`
- Reason: The private holdout access has one road-deck junction and one separated edge fragment where it meets the outer-compound drive.
- Geometry evidence: The global audit binds both disconnected junction components and rejects any extension along the compound drive.

## TE-OWNER-CORRIDOR-GRT-OBS -> c01_owner_tunnel_detour

- Exact cells: 91
- Transition events: 91
- Bounds: `{"minX":364,"minY":-45,"minZ":50,"maxX":368,"maxY":-37,"maxZ":58}`
- Sorted cell-set SHA-256: `14b894b88045fde6a45d545af51fb6d1eb8d6745e96773a3a6efe48cfc83f2e6`
- Connected components: 1 (largest 91 cells)
- Component-set SHA-256: `3c031c544ae87f2ea94012e760d4c44c5d98a4d3b6acebb38254371995877aee`
- Reason: The modern C01 detour replaces one bounded end-turn segment of the Gilded Raven owner corridor so the two separately compiled tunnel systems have one continuous five-wide joint.
- Geometry evidence: c01-bunker-classification-manifest.json and the C01 compiler route proof bind the detour; the global audit binds only this end joint.

## TE-IA-OUTER-COMPOUND -> TE-IA-RAVENSREACH-DIRT-ROAD

- Exact cells: 86
- Transition events: 86
- Bounds: `{"minX":465,"minY":74,"minZ":-224,"maxX":470,"maxY":75,"maxZ":-217}`
- Sorted cell-set SHA-256: `93a156a0287740db76ef359bdf5f43aa495b2f299200d6eb2d1d039520cacd6d`
- Connected components: 1 (largest 86 cells)
- Component-set SHA-256: `694c931e2363c2862e55e81328958ccceb9631cd1285c44a607feeadb9eeb37c`
- Reason: The Ravensreach dirt road terminates at one compact, graded junction on the outer-compound drive.
- Geometry evidence: The one-component exact cell set prevents the dirt road from claiming any longitudinal compound-drive segment.

## TE-LIBRARY-TERRACE -> TE-RUSSIAN-TEREM-PAVILION

- Exact cells: 75
- Transition events: 75
- Bounds: `{"minX":-106,"minY":71,"minZ":-447,"maxX":-96,"maxY":82,"maxZ":-432}`
- Sorted cell-set SHA-256: `163217b23b66d8f0d78e1b4d945a049e13934459d272eb9da27998d3fb1219bb`
- Connected components: 13 (largest 11 cells)
- Component-set SHA-256: `7546a1802d6b089ea855695617f3133c94897bb1156137a740d9ade89f83b270`
- Reason: The walkout terrace is deliberately threaded into the pavilion's west and north arcade piers and stepped roof edge; each of the 13 tiny structural contacts is independently hashed.
- Geometry evidence: The global audit records all pier, parapet, stair, and roof-edge transitions; no pavilion interior or broad terrace surface is admitted.

## TE-IA-DISTRICT-GOOGLE -> TE-IA-DISTRICT-ROAD-NETWORK

- Exact cells: 51
- Transition events: 51
- Bounds: `{"minX":1155,"minY":71,"minZ":-550,"maxX":1157,"maxY":78,"maxZ":-524}`
- Sorted cell-set SHA-256: `2517465ebddc9759c8669766b0aeabae000a76e6fd6aa21d564761c5a20314d6`
- Connected components: 15 (largest 4 cells)

- Reason: The road spur opens the Google-inspired security gate through exact separated lane, door, and clearance fragments.
- Geometry evidence: Fifteen small hashed fragments bind the gate mechanics without approving a fence or hall overwrite.

## TE-IA-DISTRICT-META -> TE-IA-DISTRICT-WORKER-COMMONS

- Exact cells: 49
- Transition events: 49
- Bounds: `{"minX":1040,"minY":71,"minZ":-512,"maxX":1040,"maxY":76,"maxZ":-475}`
- Sorted cell-set SHA-256: `68055e7a76e70e9894efcbfb1275baa692dcb6e0590ae64b3006195599ceec9a`
- Connected components: 16 (largest 6 cells)
- Component-set SHA-256: `766c8cddf5f0db79b1b340045aae18aee518eb1ee69022ca3041af511b46d7a6`
- Reason: The controlled worker spur passes through the Meta-inspired perimeter as exact separated gate and clearance fragments.
- Geometry evidence: Sixteen small components lock the fence opening and reject any broader campus-edge overwrite.

## TE-WL-BLUE-DRUM -> TE-WL-FREIGHT

- Exact cells: 32
- Transition events: 32
- Bounds: `{"minX":-347,"minY":18,"minZ":-611,"maxX":-340,"maxY":18,"maxZ":-608}`
- Sorted cell-set SHA-256: `ade3b732029a9be8dc560b1bd9e2cc45a2da626a79688be60ad9d4614ceb3ac4`
- Connected components: 1 (largest 32 cells)
- Component-set SHA-256: `7cda9750befdf508baf7394b77426ff4db5867cb088e4968c8d650106b5e9fd6`
- Reason: The stage freight lift has one eight-by-four landing joint in the Blue Drum rear crossover floor.
- Geometry evidence: The one-level, one-component footprint proves the lift does not erase backstage rooms or circulation.

## TE-IA-CONCORD-BROADCAST-EXCHANGE -> TE-IA-CONCORD-SOUNDSTAGE-ANNEX

- Exact cells: 30
- Transition events: 30
- Bounds: `{"minX":710,"minY":67,"minZ":-425,"maxX":715,"maxY":71,"maxZ":-425}`
- Sorted cell-set SHA-256: `dd9285738983a29344a05104d258c373e2732217a21aabf48ce0a4e1721eb2e1`
- Connected components: 1 (largest 30 cells)
- Component-set SHA-256: `68f42187478464810f26eccf6f4954dd5d7c05e5252699626912abd5069c4d6c`
- Reason: One exact six-wide by five-high enclosed link opens the original Broadcast Exchange to its soundstage annex.
- Geometry evidence: concord-broadcast-exchange-soundstage-annex-coordinate-schedule.json binds x710..715, y67..71, z-425.

## TE-MAINSTREET-EMPLOYEE-LOUNGE -> TE-MSA-B01-GUEST-SERVICES-DESTINATION

- Exact cells: 25
- Transition events: 25
- Bounds: `{"minX":-72,"minY":77,"minZ":98,"maxX":-72,"maxY":77,"maxZ":122}`
- Sorted cell-set SHA-256: `ac8e1d54492dad18e11f7374ed7ce2bb51d5caebc59334e4b83cd94d7c028e9a`
- Connected components: 1 (largest 25 cells)
- Component-set SHA-256: `e6980ead88a61695e09fb1bdf987d39da57afda0d2fbf0ae24010660dedd57af`
- Reason: The B01 third-level terrace guard replaces one straight 25-block roof-edge course on the physically attached employee lounge.
- Geometry evidence: The interface is one horizontal line and does not enter either occupied interior.

## TE-GUILDHALL-01 -> TE-LIB-GUILD-SECRET-01

- Exact cells: 15
- Transition events: 15
- Bounds: `{"minX":-59,"minY":59,"minZ":-440,"maxX":-58,"maxY":62,"maxZ":-438}`
- Sorted cell-set SHA-256: `86dfc3e5efbc82e5a7e03df0717804d08010804c229cd756f52b7147fabef5c4`
- Connected components: 1 (largest 15 cells)
- Component-set SHA-256: `99b6d40d405ff9dad1b31b9410cb8cd61095eff198dd0db1c68b63cde60f49ef`
- Reason: The isolated library-to-Guild-Hall archive tunnel has one two-column endpoint vestibule in the Guild Hall wall and floor.
- Geometry evidence: The one-component endpoint is direction-specific and the tunnel has no third network connection.

## TE-IA-DATA-DM10 -> TE-IA-INFO-ANNEX

- Exact cells: 12
- Transition events: 12
- Bounds: `{"minX":799,"minY":75,"minZ":-509,"maxX":799,"maxY":78,"maxZ":-507}`
- Sorted cell-set SHA-256: `9ee82761a46031aa143361c8379d734ed8e9e1ebc60fe21c1aebc2c555119325`
- Connected components: 1 (largest 12 cells)
- Component-set SHA-256: `e6bf4884b6310da0e1a1a119e64322cfdbaebd6d40ee0facf7e7fa2228b6f0d1`
- Reason: One exact three-wide by four-high threshold connects the fictional DM10 hall vestibule to the separate InfoBunker-inspired annex.

## Blocking offline findings

- **TE-ROUTE-C01-MOUNTAIN-PORTAL-L1:** no bounded normal-walk path found; no bounded normal-walk path found (closest 10 blocks at 807,57,-84; closest 29 blocks at 701,43,-52).
- **TE-ROUTE-C01-PUBLIC-VERTICAL:** no bounded normal-walk path found; no bounded normal-walk path found (closest 15 blocks at 839,43,-50; closest 18 blocks at 772,25,-44).
- **TE-ROUTE-C01-OWNER-VERTICAL:** no bounded normal-walk path found; no bounded normal-walk path found (closest 28 blocks at 836,15,-47; closest 29 blocks at 815,-13,-33).
- **TE-ROUTE-WESTLIGHT-VENUE-CORE:** no bounded normal-walk path found; no bounded normal-walk path found (closest 44 blocks at -438,68,-536; closest 44 blocks at -433,24,-538).
- **TE-ROUTE-MAINSTREET-WAREHOUSE-DRIVE-HALL:** no bounded normal-walk path found; no bounded normal-walk path found (closest 104 blocks at 42,64,202; closest 2 blocks at 42,64,204).
- **TE-ROUTE-MAINSTREET-WAREHOUSE-EAST-WINGS:** no bounded normal-walk path found; no bounded normal-walk path found (closest 6 blocks at 86,43,254; closest 46 blocks at 90,43,247).
- **TE-ROUTE-OBSERVATORY-ESTATE-PUBLIC:** no bounded normal-walk path found; no bounded normal-walk path found (closest 14 blocks at 195,107,144; closest 13 blocks at 209,120,182).
- **TE-ROUTE-OBSERVATORY-PORTAL-HUB:** no bounded normal-walk path found; no bounded normal-walk path found (closest 34 blocks at 224,106,157; closest 41 blocks at 231,79,156).

## Live-only follow-up gates

- **TE-LIVE-ROUTE-01:** Run a no-dig/no-tower Mineflayer walker over each representative route in both directions against the same live save state. Status: `PENDING`.
- **TE-LIVE-ROUTE-02:** Exercise powered iron-door, airlock and access-control interactions without breaking blocks. Status: `PENDING`.
- **TE-LIVE-ROUTE-03:** Observe dynamic entity collision and crowding at C01, civic, Westlight, warehouse, data-district and observatory thresholds. Status: `PENDING`.
- **TE-LIVE-ROUTE-04:** Complete the separately controlled citizen commute live walk before enabling resident shifts. Status: `PENDING`.

This FAIL does not accept the immutable-snapshot geometry and cannot satisfy Town Expansion final acceptance. A future PASS would still not claim live traversal, powered-door controls, dynamic entity clearance, or citizen activation.

DRAFT - NOT AS-BUILT

DRAFT — NOT AS-BUILT — LIVE CLOSEOUT GATES PENDING

# Town Expansion terminal as-built route QA

- Status: **PASS**
- Evidence class: `IMMUTABLE_TERMINAL_POST_SNAPSHOT_OFFLINE_GEOMETRY_ACCEPTED`
- Immutable terminal snapshot: `c39d0d67c9dec737aa5807cf5fa56a84f3c3d38d4b13d0f82599d3eb30fa6751`
- Routes: 22/22
- Directions: 44/44
- Terminal recovery commit: 57 successful guarded groups, 0 failed
- Exact rollback post-state guards: 49/49 red-carpet and 8/8 ridge-stair
- Manifest: `docs/redevelopment/2026-07-28-town-expansion/town-expansion-terminal-as-built-route-manifest.json`
- Report: `data/world-review/town-expansion-terminal-as-built-route-qa-20260728T1839Z.json`

This is immutable-snapshot geometry acceptance. Live powered-door, dynamic entity, and citizen end-to-end gates remain pending. Cached seam diagnostics cannot substitute for a fresh full bidirectional citizen walk.

DRAFT · NOT AS-BUILT

DRAFT — NOT AS-BUILT — LIVE CLOSEOUT GATES PENDING

# Westlight Island and Russian Pavilion Change Control

Change ID: `REDEV-2026-07-28-CR-WESTLIGHT-PAVILION-02`
Effective: 2026-07-28 UTC
State: **APPROVED REQUIREMENT / SURVEY, RESEARCH, DESIGN, AND RELEASE PENDING**
Mode of this record: documentation only; no live-world or database mutation

---

## 1. Controlling directives

### 1.1 Ravensreach civic pavilion

The active civic-space/pavilion design must use a researched **Russian architectural reference**. Glass-pavilion language is superseded.

The historical fact that the old `central-pavilion` glass shell was demolished remains true and must not be rewritten. This change does not authorize restoration or replay of that shell. It authorizes a new, researched Russian-referenced civic composition.

The controlling connectivity remains:

```
ENLARGED LIBRARY
    ⇄ RUSSIAN-REFERENCED CIVIC PAVILION / SHARED CIVIC SPACE
    ⇄ MONUMENTAL GUILD HALL
```

The design research must select and cite one coherent Russian architectural lineage before material or roof geometry is generated. It may not combine unrelated onion domes, Constructivist forms, folk ornament, imperial classicism, and timber-terem motifs as a decorative collage. The selection must explain:

- massing and roof form;
- structural/material language;
- arcade, porch, loggia, or gallery precedent;
- color and ornament hierarchy;
- relationship to statues and ceremonial space;
- winter/light interpretation in Minecraft; and
- how the library and Guild Hall remain the two civic bookends.

Glass may appear as normal windows or lantern glazing appropriate to the selected precedent. The pavilion may not read as a modern glass box.

### 1.2 Westlight stadium island

Westlight must be redesigned as one coherent stadium-island destination:

1. buildings that sit on or enter the water become intentional pier buildings with visible piles, deck/wharf structure, landings, service access, and public waterfront relationships;
2. add a researched amusement pier with a roller coaster and Ferris wheel;
3. place two paired outer-edge dining houses—one steak house and one shrimp/seafood house—as destination bookends;
4. align the island’s main district, pier, and stadium into one legible system of pedestrian malls and streets;
5. fill the crater west of the stadium with contained water; and
6. edge the new water body with a designed quay and green space.

The result must read as a planned waterfront/island district, not a stadium with unrelated objects scattered around it.

---

## 2. Source-state and protected-history rule

The accepted Wave 2 post snapshot is the current documented design reference:

`data/worldsnap-wave2-postrelease-d05ac7822795eff0-20260728/region`

SHA-256:

`d05ac7822795eff03340e46695a6f3accbdffdf82d11559d857e17b4d1962999`

It is not a future execution baseline. A fresh immutable snapshot is required for the Westlight/Ravensreach engineering packages.

- `westlight-venue` and `westlight-district` registered objects;
- Westlight bowl, theatre, members club, district buildings and rooms;
- the accepted Westlight infinity screen and its sightline modes;
- existing town-to-Westlight approach-road identity and wayfinding;
- the Ravensgate Garth, south stoa, library loggia, library, and accepted circulation;
- R1/Wave 2 database relations and media tied to their named snapshots; and
- every accepted operation/rollback record.

The current program may modify protected objects only through an explicit owner-approved scope, exact guards, and a new rollback package. It may not replay an old forward file or erase provenance from a catalog.

---

# 3. Required research packages

## 3.1 Russian civic-pavilion research

Required output:

- at least three authoritative museum, heritage, archival, or architectural sources;
- one selected lineage and two rejected alternatives;
- diagrammed features suitable for a pavilion/civic-space scale;
- an original Minecraft adaptation rather than a direct copy;
- a materials/roof/arcade/statue detail sheet; and
- a compatibility statement for the existing library and proposed Guild Hall.

## 3.2 Amusement-pier research

Required output:

- at least three authoritative pier, amusement-park operator, engineering, or historic-preservation sources;
- comparative plan of pier width, entry, ride zone, service zone, waterfront edge, emergency route, and destination food uses;
- roller-coaster footprint, crest/turn/clearance logic, station and maintenance access;
- Ferris-wheel diameter, hub, support, loading platform, clearance envelope, lighting, and view axis;
- queue and pedestrian-mall capacities expressed as Minecraft geometry;
- night identity and wayfinding; and
- two rejected layouts with documented reasons.

The rides may be static architectural representations, but they must be structurally legible, accessible to view, and integrated with routes. A random loop of rail or decorative circle does not pass.

## 3.3 Waterfront and crater-water research

Required output:

- quay/promenade precedents;
- pier-building structural vocabulary;
- storm/flood-edge interpretation translated into safe Minecraft containment;
- planted/green edge and hard-quay hierarchy;
- water-level datum and basin section;
- closed-boundary/leak-risk model; and
- relationship between the crater lake, stadium, outer restaurants, and pedestrian network.

---

# 4. Work package breakdown

## WL-01 — Island survey and figure-ground

Survey:

- exact island shoreline and land/water mask;
- every Westlight building/room/custom object;
- ground and water elevations;
- bridges, roads, walks, loading/service paths, and dead ends;
- stadium gates, screen axes, seating modes, stage, and destination views;
- all over-water or water-adjacent buildings;
- the west crater’s rim, bottom, openings, caves, fluids, vegetation, entities, block entities, and neighboring water;
- protected landscape and existing district buildings; and

Outputs:

- north-up island base;
- figure-ground diagram;
- water/grade map;
- protected-object overlay;
- route/sightline map; and
- problem/opportunity register.

## WL-02 — Coherent district alignment

Create a small number of legible axes:

- **Main Mall:** land arrival to stadium;
- **Pier Mall:** stadium/main district to amusement pier;
- **Waterfront Street/Quay:** continuous public edge;
- **Outer Dining Walk:** paired steak and shrimp houses;
- **Service Street:** screened, continuous, and separate where possible; and
- **Crater Green Loop:** quay/park route around the new water.

The main district, pier and stadium must share paving hierarchy, lamps, street furniture, signs, view terminals, and address logic. Every principal door must face or visibly connect to one of these routes.

## WL-03 — Intentional pier buildings

For every building occupying water:

- identify parent object and exact bounds;
- show structural piles/caissons/wharf deck;
- provide landward arrival and waterside identity;
- separate public and service access;
- prove a continuous normal-walk route;
- avoid unsupported floating walls;
- model underside, waterline, fenders/rails/steps as appropriate; and
- provide floor plan, section, exterior, waterline, and arrival captures.

## WL-04 — Amusement pier

Minimum program:

- ceremonial pier gate;
- broad public boardwalk;
- Ferris wheel with loading platform and protected clearance;
- roller coaster with station, coherent lift/crest/turn sequence and supports;
- queue/forecourt;
- arcade/concessions or small support buildings;
- service/maintenance route;
- end-of-pier overlook;
- lighting and signs; and
- unobstructed emergency-return route.

The Ferris wheel and coaster must not collide with one another, stadium sightlines, billboards, buildings, bridges, or navigation headroom.

## WL-05 — Paired outer dining houses

Design basis:

- one steak house and one shrimp/seafood house;
- paired massing and address role without identical interiors;
- outer-edge siting as island bookends;
- direct pedestrian-mall/quay access;
- water views and terraces where safe;
- complete kitchens, storage, dining, bar/service, staff and delivery routes;
- distinct identity readable from the main district and water; and
- exact building/room/media database relations.

## WL-06 — West crater lake, quay, and green space

The crater becomes a contained designed water body:

DRAFT — NOT AS-BUILT

- approved water surface datum;
- exact water volume;
- protected rim and subgrade objects;
- hard quay at civic/active edges;
- green/soft edge at park edges;
- continuous green loop and overlooks;
- lighting, rails, stairs and landings;
- no uncontrolled outflow or flooded cave;
- no accidental connection to unrelated water systems; and
- before/after hydrology maps and sections.

No broad unguarded `fill water` command is acceptable. The release package must enumerate or safely group exact-air/source cells within a proven closed boundary and account for neighbor-fluid behavior.

### WL-07 — Integrated release and evidence

Westlight packages must be integrated with:

- the ceremonial town-to-stadium boulevard and billboard program;
- the midway oasis/mini-bunker work;
- existing Westlight screen sightlines and modes;
- town-expansion database/media IDs;
- the final atlas and PM dossier;
- the next owner-only Sites version; and
- the Box handoff.

---

## 5. Pavilion correction work package

### PAV-RU-01 — Research and selection

- select the Russian architectural lineage;
- record authoritative sources and rejected alternatives;
- define materials, roof, porch/arcade, fenestration, ornament and statues; and
- publish a compatibility matrix against the library, Garth/stoa/loggia, and Guild Hall.

### PAV-RU-02 — Spatial integration

- preserve the library–civic-space–Guild Hall axis;
- align doors, terraces, paving and ceremonial movement;
- preserve or deliberately redesign accepted Ravensgate routes;
- keep the enlarged-library terrace functional;
- prevent pavilion massing from hiding the Guild Hall or library; and
- establish day/night landmark hierarchy.

### PAV-RU-03 — Release evidence

- existing-condition and proposed plans;
- elevations/sections;
- protected-object/cell intersection report;
- exact forward/rollback;
- bidirectional library ↔ civic pavilion ↔ Guild Hall route;
- fixed-camera exterior/interior/axis evidence; and
- refreshed database, atlas, dossier, Sites and Box records.

---

## 6. Acceptance matrix

| ID | Requirement | Pass condition |
|---|---|---|
| PAV-RU-01 | Russian reference replaces glass pavilion | Selected cited lineage; no modern glass-box reading |
| PAV-RU-02 | Civic connectivity retained | Library ↔ civic space/pavilion ↔ Guild Hall route passes both directions |
| WL-COH-01 | Island coherence | Figure-ground, axes, routes and addresses read as one district |
| WL-PIER-01 | Water buildings intentional | 100% have designed pier/wharf structure and valid routes |

DRAFT · NOT AS-BUILT

| DRAFT — NOT AS-BUILT — LIVE CLOSEOUT GATES PENDING | | |
|---|---|---|
| WL-RIDE-01 | Ferris wheel | Complete wheel/support/loading/clearance evidence |
| WL-RIDE-02 | Roller coaster | Complete station/track/support/clearance evidence |
| WL-FOOD-01 | Paired outer houses | Steak and shrimp houses complete, distinct, and connected |
| WL-MALL-01 | Main/pier/stadium alignment | Continuous malls/streets with clear destination sequence |
| WL-WATER-01 | Crater water | Exact contained water volume; zero leaks/unplanned flooding |
| WL-QUAY-01 | Quay and green edge | Continuous public loop with hard/soft edge hierarchy |
| WL-SIGHT-01 | Stadium modes protected | Screen/stage/sports sightline matrix passes |
| WL-ROUTE-01 | Movement | Every required route passes both directions without dig/tower/flight |
| WL-DB-01 | Database | All new/changed objects and relations imported with integrity/FK PASS |
| WL-MEDIA-01 | Evidence | Plans, sections, maps and exact captures pass hash/decode QA |
| WL-PUB-01 | Sites | New owner-only version healthy in production |
| WL-BOX-01 | Box | Final remote paths and SHA-1 match local artifacts |

## 7. Risk register

| ID | Risk | Response / stop condition |
|---|---|---|
| WL-R01 | Water fill escapes crater or enters caves | Closed-boundary proof, neighbor-fluid model, exact post census |
| WL-R02 | Water destroys block entities/inventories | Complete basin object census; zero unapproved intersections |
| WL-R03 | Pier buildings still look accidentally afloat | Required waterline structure and section evidence |
| WL-R04 | Ferris wheel/coaster collide with district or each other | 3D clearance envelopes and cross-package cell audit |
| WL-R05 | Rides block stadium screen/stage modes | Existing Westlight sightline matrix is a protected gate |
| WL-R06 | Pier becomes a dead end | Emergency-return/service route plus normal public loop |
| WL-R07 | Main/pier/stadium remain visually disconnected | Shared axis, paving/lighting family, fixed approach cameras |
| WL-R08 | Restaurants become decorative shells | Full operational room/service/route schedule |
| WL-R09 | Quay is an unsafe vertical drop | Rails, landings, stairs, continuous walk-edge audit |
| WL-R10 | Green space is leftover filler | Programmed loop, overlooks, planting/edge hierarchy |
| WL-R11 | Russian pavilion becomes theme-park collage | One selected lineage and rejected alternatives |
| WL-R12 | Russian pavilion blocks civic bookend views | Axis/elevation/sightline test before generation |
| WL-R13 | Old glass-pavilion package is replayed | Historical shell remains retired; new exact package only |
| WL-R14 | Box receives stale pre-change atlas/catalog | Final sync after post atlas/catalog/dossier only |

## 8. Affected records

The following are historically valid but no longer sufficient as current design/publication records after this change:

- `docs/redevelopment/2026-07-28-town-expansion/coordinate-schedule.json` — records the retired glass pavilion and preliminary Westlight road/oasis holds; it must receive a Russian-pavilion and island-plan addendum;
- `docs/redevelopment/2026-07-28-town-expansion/guild-hall-and-bar-source-of-truth.md` and `guild-hall-program.json` — connectivity remains, but the generic Garth/pavilion interpretation must be coordinated with the selected Russian architectural response;
- `builds/manifest.yaml` — active Westlight source objects remain protected inputs, not the final island master plan;
- `data/exports/box/town-expansion-baseline-2026-07-28/team-a/*` — baseline evidence only;
- `data/exports/world-catalog-wave2-post-2026-07-28/*` — historical Wave 2 catalog; refresh after database import;
- `data/exports/box/redevelopment-atlas-wave2-post-2026-07-28/team-a/*` — historical accepted atlas; generate a new post atlas;
- `world-showcase/public/data/buildings.json` and `world-showcase/public/reports/*` — current Sites content; replace in the next source commit; and
- Sites version 4 — healthy current historical publication, not a claim that the Westlight/Russian-pavilion change is built.

DRAFT - NOT AS-BUILT

## 9. Required Box closeout

The final Box handoff must contain, at minimum:

- Russian pavilion research brief and selected-source matrix;
- Russian pavilion plan/elevations/sections/material sheet;
- library–pavilion–Guild Hall route and sightline reports;
- Westlight island existing/proposed figure-ground maps;
- shoreline/water/grade and protected-object surveys;
- pier-building register and individual plans/sections/captures;
- amusement-pier research paper;
- amusement-pier plan;
- Ferris-wheel elevation/clearance and evidence;
- roller-coaster plan/profile/clearance and evidence;
- steak-house and shrimp-house plans, room schedules and captures;
- main/pier/stadium mall/street alignment plan;
- crater-lake containment and neighbor-fluid report;
- quay/green-space plan and loop-route QA;
- exact forward/rollback, transaction and independent post QA;
- database import and object/media catalog;
- final atlas and PM PDF;
- Sites saved-version/production-health record; and
- Box sync report plus remote SHA-1 comparison.

Files must be copied to approved Box connector roots before sync. A local path under `data/exports/box` is staging evidence only. The change is not Box-verified until the remote folder/path and SHA-1 equality checks pass.

---

## 10. Current decision

The owner requirements are recorded and controlling. No document reviewed here proves that the Russian pavilion, coherent Westlight island, amusement pier, paired restaurants, aligned pedestrian malls/streets, crater lake, quay, or green space has been engineered or built.

Current state: **REQUESTED / CHANGE CONTROLLED / PHYSICAL RELEASE PENDING**.

DRAFT — NOT AS-BUILT

DRAFT — NOT AS-BUILT — LIVE CLOSEOUT GATES PENDING

# Westlight Three-Venue Audit and Redesign

Date: 2026-07-28

Status: **AUDIT AND COORDINATE DESIGN — NOT A BUILD RELEASE**

Companion schedule: `westlight-three-venue-coordinate-schedule.json`

---

## Executive decision

Westlight does not currently contain three theaters. It contains three nested database structures:

1. `WL-BOWL`, a stadium/arena with a four-sided center-hung display;
2. `WL-THEATRE`, one end-stage theater with orchestra, parterre and balcony tiers; and
3. `WL-CLUB`, a two-level members club/private box lounge.

The orchestra, parterre and balcony are not separate auditoria. They all face one north-end stage. Calling them three theaters is the principal source of confusion in the records. The recommended correction is to operate the complex as three plainly different **venues**:

- **Westlight Sky Bowl** — the existing stadium/arena;
- **Blue Drum Theatre** — the existing single end-stage house; and
- **Lantern Studio** — a new small cabaret/black-box performance room inserted inside the members-club program while its lounge and bar remain.

This produces three honest public identities without damaging the accepted stadium bowl, infinity screen, field, concourses, public entrance throat or verified stair routes.

---

## Evidence control

This audit is offline and read-only. It uses:

- immutable snapshot `data/worldsnap-town-expansion-complete-baseline-20260728T0315Z/region`, canonical SHA-256 `0bb1faa61ca69724816afe682080e3a517fa974ec1300c3651e399ea03505501`;
- `data/world-map.db`, opened read-only, SHA-256 `1bd71512b9246b67b25a7fff91cd0745eb47d089e66fa15ee7ab23a41b21a503`;
- the authored geometry in `scripts/gen_westlight.py`;
- the accepted screen release and its 48-view evidence matrix in `docs/redevelopment/2026-07-27/westlight-screen-release.md`;
- the current waterfront and expansion coordinate schedules; and
- the existing exact-object media catalog.

The current media record contains one exact-object theater capture, `wl-theatre--below-grade-theatre-and-lobbies.png`. It is a dark lateral view from approximately `(-357, 36, -556)` looking east, not a centered view toward the stage. There is no exact-object capture that independently explains the club or the three venue arrivals. The accepted bowl screen does have 48 matched views. The overview and theater floor-plan graphics are useful inventories, but their large half-floor rectangles are explicitly functional database zones, not proof of physical walls.

---

## What is actually built

| Object | Exact bounds | Current program | Finding |
|---|---|---|---|
| `WL-BOWL` | x `-429..-291`, y `55..91`, z `-629..-491` | Field, service ring, main and upper concourses, members terrace, crown walk and press gallery | Arena; preserve |
| `WL-INFINITY-SCREEN` | x `-369..-351`, y `74..92`, z `-568..-552` | Four display faces with 48-view evidence | Correct focal object for an all-around bowl; preserve |
| `WL-THEATRE` | x `-421..-299`, y `18..50`, z `-613..-498` | One fan-raked orchestra, parterre, cantilevered balcony, one north-end stage, three lobby levels | One theater, not three |
| `WL-CLUB` | x `-417..-400`, y `35..44`, z `-566..-550` | Members lounge, bar/dance floor, private balcony and club landing | Hospitality room, not currently a theater |

The source geometry confirms the Blue Drum house is organized around a stage at x `-377..-343`, y `18..43`, z `-607..-590`. Fifteen orchestra rows and eleven balcony rows are elliptical arcs centered on that stage. Its existing seat orientation is therefore fundamentally correct. The deficiency is not that the entire house faces the wrong way; it is that the distinct house, support spaces and public identity are not legible in the shared stadium shell.

DRAFT — NOT AS-BUILT — LIVE CLOSEOUT GATES PENDING

## Why the three identities disappear

1. `WL-BOWL` and `WL-THEATRE` use almost the same south arrival: `(-359,68,-498)` and `(-354,68,-498)`.
2. The members club has only an internal below-grade entrance at `(-408,36,-560)`.
3. The arena, theater and club are stacked inside one broad blue/white/black material family, so a visitor sees one object rather than three destinations.
4. The database partitions every floor into broad functional halves. These rectangles obscure the actual radial lobby, fan-shaped house and private club geometry.
5. Existing exact-object media does not provide a complete arrival-to-seat sequence, and the one theater capture does not show the stage-facing relationship.
6. Backstage, rehearsal, dressing, technical and freight functions are too weakly registered as distinct rooms, so the building reads as seats plus corridors instead of a working performance complex.

---

# Public-source design basis

This is a Minecraft planning analog, not a claim of real-world code compliance. The following public standards nevertheless supply useful and testable design logic:

- The U.S. Access Board requires assembly wheelchair spaces to be integral to the seating plan, horizontally and vertically dispersed, connected without overlapping required circulation, and provided with comparable sightlines to the screen, performance area or playing field. See ADA Standards §§221 and 802.
- The Access Board also states that an accessible route must connect stages and performance areas to seating, dressing rooms and ancillary performer spaces. See the Chapter 4 accessible-route guide.
- Where a ramp analog is used, the ADA Standards use a maximum 1:12 running slope, landings and clear-width requirements. See ADA Chapter 4.
- The federal Whole Building Design Guide identifies sloped floors with level row terraces as a sightline tool, recommends directly accessible lower and intermediate rows, and includes a lobby, stage, control/projection room and equipment storage in its representative auditorium program. See WBDG Auditorium.
- WBDG places loading docks away from public entrances and public spaces, near freight elevators, with a protected staging area and separated public/service circulation. It also calls for marked pedestrian/forklift routes and says a dock must not be an emergency egress path. See WBDG Loading Dock.
- OSHA requires dockboards to support their intended load, resist run-off and movement, and requires measures that keep the trailer from moving while the dockboard is in use. See OSHA 29 CFR 1910.26.
- GSA identifies its current P100 as mandatory performance criteria for GSA-owned buildings. Its loading-dock planning is used here only as a public service-separation precedent. See GSA Facilities Standards.

---

# Three distinct public identities

## 1. Westlight Sky Bowl

Keep the all-around bowl and the center-hung four-face screen. The screen is the right focal form for encircling seating and already has a 48-view evidence matrix. The south gate remains the arena address, but two flanking sign pylons and low ticket/wayfinding counters give it a name without touching the protected four-block throat at x `-356..-353`, z `-506..-471`. The west pylon stops at x `-365` to preserve the forecourt fountain sources at x `-364..-361`, y `68`, z `-496..-492`.

The Sky Bowl identity uses high-contrast white, black and lime display accents. No proposed work changes the screen, field, bowl rake, vomitories, concourses or canopy anchors. Any future accessible-seating work must be an exact, row-level controlled repair and must reproduce the screen sightline matrix.

## 2. Blue Drum Theatre

Give the end-stage theater a separate west arrival at x `-443..-431`, z `-548..-526`, with a visible blue masonry drum, warm-brass canopy, marquee and vertical core to the three existing lobby levels. A short underground link enters the theater outside the arena's y `55..91` bowl volume.

Inside, retain the north-end stage and fan-raked seating. Strengthen:

- a stage-centered center aisle plus two radial side aisles;
- level wheelchair/companion terraces at lower, parterre and balcony entry levels, subject to a ray-by-ray proof;
- row-end lighting and unmistakable section/row wayfinding;
- an acoustical vestibule between lobby and house;
- a rear control room with a direct view to the stage;
- separate stage-left and stage-right wings and a full rear crossover;
- dressing suites, an accessible dressing room, green room, rehearsal room, wardrobe/laundry, instrument and equipment storage; and

public lobbies.

### 3. Lantern Studio and Club

Do not falsely rename the entire members club as a theater. Retain `WL-CLUB` as the hospitality parent and add a child feature, `WL-STUDIO`, for a 40–60 seat cabaret/black-box room. Its small footprint is appropriate for a flexible room, not another large proscenium house.

The studio receives a separate west arrival at x `-443..-431`, z `-589..-568`. The stage occupies the north edge of the existing club, the cabaret seating faces north, and the existing bar/lounge remains at the rear. A west annex contains an acoustical vestibule, dressing/green room, control booth, equipment store and a small rehearsal/meeting room. The private balcony becomes a technical/gallery level while retaining hospitality use.

Lantern's public language is dark oak, amber light, oxblood fabric and copper, clearly different from the blue theater and white/lime arena.

---

## Sightline and seating contract

The coordinate schedule establishes one focal target per venue:

- Sky Bowl: center of `WL-INFINITY-SCREEN`, approximately `(-360,80,-560)`;
- Blue Drum Theatre: stage focal point `(-360,22,-598)`; and
- Lantern Studio: stage focal point `(-408,37,-564)`.

No seat may be accepted merely because it points generally toward a stage. Release evidence must include:

1. unobstructed seated-eye rays to the relevant focal target;
2. standing-spectator checks where a concert configuration makes standing likely;
3. horizontal and vertical accessible-position dispersion;
4. no wheelchair position inside a required aisle;
5. an arrival-to-seat normal-walk test from each venue's named entrance; and
6. a performer normal-walk test from dressing room and freight lift to stage.

For the Sky Bowl, the existing 48-view screen matrix remains the baseline. For Blue Drum, at least 24 fixed same-camera views are required: left, center and right across lower, middle and balcony bands, with seated and standing configurations. Lantern requires at least 8 views covering the flexible floor, rear bar and gallery.

---

## Back-of-house and basement program

Two new support levels fit below the theater without using the known natural or authored voids:

- **B1, y** `7..15` — a larger L-shaped scene shop, scene store, wardrobe/laundry, instrument/equipment store, technical plant and freight receiving route;
- **B2, y** `-5..3` — a deliberately narrowed western L-shaped archive, secure props/costume store, staff support and resilient plant level.

The broader B2 eastern candidate is rejected. It contains existing plain-air voids at approximately x `-352..-336`, z `-611..-601` and x `-351..-344`, z `-591..-579`. Whether those voids are old excavation or an unregistered tunnel, they are not safe ground to overwrite. The selected B2 boxes stop west of those voids and contain zero air, cave-air, fluids, waterlogged blocks or block entities.

---

## Freight and semi-truck service

The only credible dock is east of the registered stadium district, not in the south public forecourt or future pier mall:

- dock/court parcel x `-271..-243`, z `-620..-584`;
- two east-facing loading positions at the west dock wall;
- weather-protected receiving/staging, dock manager sightline, personnel door, freight lift and marked pedestrian strip;
- a separated freight road tied to the approach around `(-224,70,-496)`, staying east of the planned pier egress; and
- a below-grade corridor x `-340..-264`, y `7..15`, z `-611..-605`, joining a stage lift at x `-347..-340`.

The surface spur may require short pile/causeway construction where the broader approach crosses water pockets, but the exact dock, lift and below-grade route boxes are dry in the immutable census. The public stadium throat and pier pedestrian mall never double as freight routes.

---

## Snapshot census and exclusions

Exact offline Anvil censuses found:

DRAFT · NOT AS-BUILT

| DRAFT — NOT AS-BUILT — LIVE CLOSEOUT GATES PENDING | | | | |
|---|---|---|---|---|
| Blue west portal/link | 0 | 0 | 0 | viable design reserve |
| Lantern west portal/link/club | 0 | 0 | 0 | viable design reserve |
| Lantern annex/B1 | 0 | 0 | 0 | viable design reserve |
| East loading court and lift | 0 | 0 | 0 | viable design reserve |
| B1 north and east L-shape | 0 | 0 | 0 | viable design reserve |
| B2 selected western L-shape | 0 | 0 | 0 | viable design reserve |
| Underground freight corridor | 0 | 0 | 0 | viable design reserve |
| Stage freight/core link | 0 | 0 | 0 | viable design reserve |
| Narrowed Sky Bowl identity pylons | 0 | 0 | 0 | viable design reserve |

The wider stadium district contains 84 block entities, including containers and three mob spawners. All remain protected. The spawners at `(-289,23,-596)`, `(-358,38,-639)` and `(-368,42,-618)` do not intersect the selected basement, dock or freight geometry. `WL-THEATRE` and `WL-CLUB` contain no block entities, but that fact does not authorize unguarded edits.

---

# Cross-package fit

- **Crater lake/greenway:** its east edge is x `-447`; the two west portals begin at x `-443`, leaving a three-cell intervening buffer. No portal enters the lake envelope.
- **Westlight pier:** its planning envelope begins south at z `-445`. The dock and freight system remain north/east and do not enter the pier or the stadium-to-pier pedestrian mall.
- **East pier egress:** x `-290..-278`, z `-502..-365`; the freight spur and court remain east of x `-277`.
- **Westward parkway:** its south outer edge is z `-652`; the dock begins at z `-620`, leaving a 31-cell intervening band.
- **Protected stadium throat:** x `-356..-353`, z `-506..-471`; the arena identity elements flank it and do not occupy it.
- **Forecourt fountain:** its 19 water-source cells at x `-364..-361`, y `68`, z `-496..-492` remain outside the narrowed west identity pylon.
- **Accepted bowl/screen/routes:** no work package may modify them unless a new exact defect report and controlled repair package supersede this preservation rule.

---

# Required database and media handoff

After a future accepted build, update the database only from post-state evidence:

- retain `WL-BOWL`, `WL-THEATRE` and `WL-CLUB`;
- add `WL-STUDIO` as a performance-room child of `WL-CLUB`;
- add discrete lobby, dressing, green, rehearsal, control, storage, dock, freight-corridor, B1 and B2 room features;
- attach exact screenshots to their object IDs rather than relying on folder proximity; and
- mark old broad functional zones as superseded only after the detailed room geometries are proven.

The post-build media minimum is 42 new matched images: 6 exterior/arrival, 24 Blue Drum sightlines, 8 Lantern sightlines and 4 dock/backstage/freight views, plus an updated overview, one floor plan per occupied level and one service section showing dock-to-stage continuity.

---

# Release gates

This package does not contain build operations and authorizes no live mutation. A physical release still requires a fresh immutable snapshot, exact one-cell guards, a protected block-entity register, fluid and neighboring-fluid census, cross-package lock, player/entity clearance, before media, a fixed atomic transaction, exact rollback, post snapshot, route/sightline QA, database import and matched after media. A passing planning census is not an execution permit.

DRAFT · NOT AS-BUILT

DRAFT — NOT AS-BUILT — LIVE CLOSEOUT GATES PENDING

# Westward Entertainment, Housing, and Workforce Change Control

Change ID: `REDEV-2026-07-28-CR-WESTWARD-DISTRICTS-03`
Effective: 2026-07-28 UTC
State: **APPROVED REQUIREMENT / RESEARCH, SURVEY, DESIGN, AND RELEASE PENDING**
Mode of this record: documentation only; no live-world, database, Sites, or Box mutation

---

## 1. Controlling directives

### 1.1 Facing amusement-park pair

Create two researched, facing amusement parks west of Westlight:

- a dry amusement park informed by the operating and spatial lessons of Adventureland and Worlds of Fun;
- a water park informed by the operating and spatial lessons of Adventure Bay and Oceans of Fun; and
- a shared arrival composition that makes the two gates read as a deliberate pair without making them identical.

These references are precedent prompts, not copy instructions. The final district must be original, scaled to the world, independently named, and supported by cited research into entry sequences, ride zoning, water attractions, family zones, service circulation, safety, queues, food, landscape, parking/transit analogues, and night identity.

### 1.2 Westward approach extension and crater-green integration

Extend the Westlight approach road westward to serve both parks. Coordinate it with the stadium-island Main Mall, the amusement pier, and the crater-lake green belt. The result must be one legible destination corridor with a clear street hierarchy, protected pedestrian crossings, service access, and an unbroken public green/water relationship.

The extension must not turn the crater lake into a traffic island or sever its continuous quay/green loop.

### 1.3 Lakeside housing

Create a Hampton-style medium-density lakeside neighborhood integrated with the crater-lake green belt. “Hampton-style” controls a coherent residential character—generous porches, gables, restrained coastal materials, planted setbacks, and a strong public-lakeside address—and does not authorize copying a specific private residence.

The plan must balance:

- continuous public access to the lake;
- private and semiprivate residential thresholds;
- medium-density blocks rather than isolated estate lots;
- complete street, alley/service, and attached-garage logic;
- views without privatizing the entire shoreline;
- drainage, grade, and safe water edges; and
- direct walking connections to Westlight and the parks.

Every residential garage remains subject to `REDEV-2026-07-28-CR-ATTACHED-GARAGES-01`: it must be attached to its parent house, and every large house must have four or six clear attached bays.

### 1.4 Southwest Ravensreach housing

Create two affordable/distressed-housing projects southwest of Ravensreach. They must connect to one another and each must organize around a useful central outdoor space. “Distressed” describes the intended economic/program condition; it is not permission for unsafe routes, inaccessible doors, arbitrary ruin, or dehumanizing caricature.

The projects require:

- distinct identities within one connected neighborhood;
- complete dwelling, common, service, and address schedules;
- central outdoor spaces with seating, play/community, light, planting, and visible entries;
- safe pedestrian links between the two projects and to Ravensreach;
- credible service/refuse/loading access;
- lighting and passive-surveillance sightlines;
- no unexplained leftover gaps; and
- exact building, room, route, and media database relationships.

DRAFT — NOT AS-BUILT — LIVE CLOSEOUT GATES PENDING

Build a direct staff path from Ravensreach to the rear of the MainStreet main building and provide an employee lounge at that destination. The route must be recognizably staff-oriented while remaining safe and legible:

- surveyed origin and exact rear-service destination;
- continuous normal-walk surface and adequate headroom;
- stairs/landings that are comfortable in both directions;
- lighting, signs, crossings, weather-cover cues where appropriate, and no accidental public dead ends;
- separation from incompatible loading or secure areas; and
- an employee lounge with seating, food/drink support, lockers/storage, wash/support access, and a clear connection to the staff entrance.

---

# 2. Source-state and release boundary

The accepted Wave 2 post snapshot remains the documented design reference:

`data/worldsnap-wave2-postrelease-d05ac7822795eff0-20260728/region`

SHA-256:

`d05ac7822795eff03340e46695a6f3accbdffdf82d11559d857e17b4d1962999`

It is not a future execution baseline. Survey from a new immutable snapshot before designing exact cells.

This change must coordinate with:

- `REDEV-2026-07-28-CR-WESTLIGHT-PAVILION-02`;
- `REDEV-2026-07-28-CR-ATTACHED-GARAGES-01`;
- the accepted Westlight screen and stadium sightline modes;
- the planned crater lake, quay, and green loop;
- the stadium boulevard, oasis, and billboard packages;
- existing Ravensreach and MainStreet objects, routes, rooms, inventories, and protected construction; and
- every other active package’s explicit target set.

No old forward package may be replayed. Each physical package needs new exact source guards, inverse rollback, entity/player clearance, fixed transaction order, post snapshot, independent QA, and matched evidence.

---

# 3. Research and survey packages

## 3.1 Park precedent research

Use authoritative park/operator, planning, engineering, accessibility, or historic sources. The research paper must:

- compare Adventureland/Adventure Bay and Worlds of Fun/Oceans of Fun as paired dry/water-park precedents;
- distinguish transferable planning lessons from branded or protected forms;
- map gate, midway, family, thrill, water, food, service, maintenance, emergency, and landscape zones;
- evaluate queue length, pedestrian capacity, ride clearance, sightlines, night identity, and phased growth;
- select one original paired-park concept and reject at least two alternatives; and
- document all citations and the final design translation.

## 3.2 Westward land and route survey

Survey:

- shoreline, crater-lake basin, westward terrain, grades, water, caves, trees, fluids, block entities, inventories, and entities;
- every existing road, bridge, path, parcel, protected object, and view;
- candidate park gates, service edges, emergency returns, and expansion reserves;
- candidate housing blocks and lake access;
- exact Ravensreach housing parcels;
- exact staff-path origin/destination and rear MainStreet service geometry; and
- cross-package intersections with the amusement pier, restaurants, boulevard, oasis, and current database features.

Outputs must include north-up base maps, grade/water maps, protected-object overlays, figure-ground diagrams, route/sightline diagrams, and a conflict register.

DRAFT — NOT AS-BUILT — LIVE CLOSEOUT GATES PENDING

## 4. Work packages

### WP-01 — Paired-park master plan

Create an original facing-gate composition with:

- shared ceremonial arrival and orientation space;
- dry-park and water-park entries that are distinct but coordinated;
- clear ticket/security/queue zones;
- guest, staff, service, maintenance, and emergency route systems;
- ride/attraction districts, food, restrooms/support, first-aid, storage, and operations;
- a night landmark visible from the approach but not blocking stadium sightlines; and
- phased expansion parcels that do not look unfinished.

### WP-02 — Dry amusement park

Minimum planning program:

- gate street or entry plaza;
- family zone;
- major thrill-ride zone;
- at least one coherent coaster station/support/clearance package;
- flat-ride or observation landmark;
- food/event court;
- maintenance/service compound; and
- complete guest and emergency-return loops.

### WP-03 — Water park

Minimum planning program:

- controlled gate and changing/support zone;
- family/splash area;
- pool or basin attraction;
- slide/tower complex with legible supports and runouts;
- shaded/rest areas translated to the world’s material language;
- food/support/first-aid;
- plant/service interpretation; and
- exact contained-water and neighbor-fluid proof.

### WP-04 — Westward approach

Extend the road with:

- surveyed horizontal and vertical alignment;
- consistent carriageway, sidewalks/greenway, lighting, signs, and crossings;
- decision points for the stadium, pier, lake, housing, dry park, and water park;
- separated service access where feasible;
- coordinated billboard/view policy; and
- normal-walk tests in every required direction.

### WP-05 — Crater-green-belt integration

Preserve a continuous public green loop while connecting:

- stadium and pier;
- crater lake/quay;
- lakeside housing;
- both park gates; and
- the westward road and transit/parking analogues.

Every road crossing requires an explicit pedestrian treatment. No new parcel may block the lake loop or consume an unrecorded protected edge.

### LH-01 — Hampton-style lakeside neighborhood

Provide:

- measured block and lot schedule;
- medium-density building types and height/setback controls;

DRAFT · NOT AS-BUILT

- local streets, rear service where appropriate, and attached garages;
- shared greens/courts at useful intervals;
- building/room/address IDs; and
- exterior, street, waterfront, courtyard, and floor-plan evidence.

### RH-01 — Southwest project A

Provide a complete connected housing project centered on a programmed outdoor space. Define every dwelling building, common room, community/service space, entrance, street/path address, and operational route.

### RH-02 — Southwest project B

Provide a second, distinct but connected housing project with the same completeness. Its central outdoor space must complement rather than duplicate Project A.

### RH-03 — Housing connection and dignity audit

Prove:

- continuous A ↔ B ↔ Ravensreach normal-walk routes;
- visible and safe central-space entries;
- no trapped courts, inaccessible units, forced jumps, or unexplained ruins;
- service access without dominating the central spaces;
- lighting and sightline coverage; and
- a coherent edge where new projects meet existing Ravensreach.

### ST-01 — Staff path

Publish a station/grade/headroom schedule, protected-intersection report, forward/rollback package, and bidirectional walk report for:

`Ravensreach staff origin ↔ MainStreet rear staff entrance`.

### ST-02 — Employee lounge

Publish a room plan, adjacency/operations schedule, protected-object report, exact transaction package, interior/exterior captures, and database relation for the lounge. The lounge may not obstruct existing back-of-house circulation, inventories, or loading.

---

## 5. Acceptance matrix

| ID | Requirement | Pass condition |
|---|---|---|
| WP-RES-01 | Paired-park research | Cited comparison, original selected scheme, two rejected alternatives |
| WP-PAIR-01 | Facing dry/water parks | Gates share a legible arrival and retain distinct identities |
| WP-DRY-01 | Dry park complete | Program, rides, queues, service and return loops all present |
| WP-WET-01 | Water park complete | Program complete; water contained; slide/runout clearances pass |
| WP-ROAD-01 | Westward approach | Every destination is signed/visible and routes pass both directions |
| WP-GREEN-01 | Crater integration | Continuous lake/green loop with explicit safe crossings |
| LH-CHAR-01 | Lakeside character | Approved coherent Hampton-style palette/massing, no direct copy |
| LH-DEN-01 | Medium density | Approved measured blocks/types; no isolated-estate sprawl |
| LH-PUB-01 | Public lake edge | Continuous public route and protected view/access points |
| LH-GAR-01 | Garages | All residential garages attached; large houses have 4 or 6 bays |
| RH-CON-01 | Projects connected | A ↔ B ↔ Ravensreach passes in both directions |
| RH-CIV-01 | Central outdoor spaces | Both are programmed, overlooked, lit, accessible, and safe |
| RH-DIG-01 | Dignity/completeness | No caricature, unsafe ruin, inaccessible dwelling, or leftover void |
| ST-ROUTE-01 | Staff path | Ravensreach ↔ rear MainStreet passes both directions normally |
| ST-LNG-01 | Employee lounge | Complete room/operations program and unobstructed staff connection |
| WD-XPKG-01 | Package coordination | Zero unapproved target intersections |
| WD-DB-01 | Database | Every object/room/route/media relation imported; integrity/FK PASS |

DRAFT - NOT AS-BUILT

| DRAFT — NOT AS-BUILT — LIVE CLOSEOUT GATES PENDING | | |
|---|---|---|
| WD-MEDIA-01 | Media | Required maps/plans/captures decode and match exact objects |
| WD-PUB-01 | Sites | New owner-only version returns HTTP 200 / Worker `ok` |
| WD-BOX-01 | Box | Final remote paths exist and remote SHA-1 equals local |

# 6. Maps, screenshots, and database contract

Minimum maps:

- current and proposed westward regional master plan;
- paired-park figure-ground and zoning;
- dry-park and water-park plans;
- westward road station/grade/decision map;
- crater-green-belt and public-waterfront access map;
- lakeside housing block/address plan;
- southwest Ravensreach projects and connection plan;
- staff-path station/grade/headroom map; and
- protected-object/cross-package intersection map.

Minimum exact screenshots:

- matched regional approach views;
- each park gate and shared arrival;
- every major ride/attraction, queue, service, and water containment condition;
- road decision points and lake crossings;
- lakeside housing street/water/court views plus every registered building;
- both housing-project arrivals, central spaces, connections, and every registered building;
- both ends and critical stations of the staff path; and
- employee-lounge entry, room, support, and path relationship.

Each final object must have:

- stable feature and parent/child IDs;
- exact post-state bounds and snapshot identity;
- floor-plan/media path, hash, camera, and view-type relations;
- route relations where required;
- import ledger counts and accepted database hash; and
- integrity `ok` with zero foreign-key violations.

DRAFT · NOT AS-BUILT

# 7. Risk register

| ID | Risk | Required response / stop condition |
|---|---|---|
| WD-R01 | Precedent becomes an unauthorized copy | Cite lessons, create original layout/names/forms |
| WD-R02 | Parks are oversized and fragment the world | Measured catchment, phased parcels, figure-ground review |
| WD-R03 | Road severs lake green belt | Continuous loop plus explicit safe crossing at every conflict |
| WD-R04 | Dry/water gates create guest-service conflicts | Separate route diagrams and conflict simulation |
| WD-R05 | Water-park fluid escapes | Closed-boundary and neighbor-fluid proof; exact guarded cells |
| WD-R06 | New rides block stadium or island views | 3D envelope and protected sightline matrix |
| WD-R07 | Housing privatizes lake | Continuous public edge and mapped access/view easements |
| WD-R08 | “Distressed” becomes unsafe or demeaning | Dignity audit, complete rooms/routes, no arbitrary decay |
| WD-R09 | Housing courts are leftover voids | Program, enclosure, access, lighting, and sightline evidence |
| WD-R10 | Staff path damages protected objects | Fresh survey and exact intersection report before release |
| WD-R11 | Lounge blocks loading/inventories | Back-of-house adjacency and protected-inventory gates |
| WD-R12 | Box receives partial pre-change material | Sync only the accepted final register; verify remote SHA-1 |

DRAFT — NOT AS-BUILT — LIVE CLOSEOUT GATES PENDING

## 9. Box closeout and current decision

The final Box handoff must add:

- precedent research paper and source matrix;
- paired-park selected/rejected master plans;
- dry-park and water-park program, plans, sections, ride/clearance, route, and water-containment evidence;
- westward road alignment, station, crossing, and route reports;
- crater-green-belt integration plan;
- Hampton-style lakeside design code, block/address plans, routes, floor plans, and exact captures;
- both southwest housing project plans, room schedules, central-space plans, connection/dignity QA, and exact captures;
- staff-path survey/design/transaction/route/evidence;
- employee-lounge plan/operations/transaction/evidence;
- combined forward/rollback, transaction, post snapshot, QA, database, atlas, catalog, PM PDF, and Sites production record; and
- Box sync report plus complete remote SHA-1 comparison.

A path under `data/exports/box` is staging, not proof of cloud transfer.

Current state: **REQUESTED / CHANGE CONTROLLED / PHYSICAL RELEASE PENDING / BOX PENDING**.

DRAFT · NOT AS-BUILT

DRAFT — NOT AS-BUILT — LIVE CLOSEOUT GATES PENDING

# Westward Paired Parks, Parkway, Greenbelt, and Harborlight Courts

Change package: `REDEV-2026-07-28-WESTWARD-PARKS-04`
Date: 2026-07-28 UTC
State: **SURVEYED MASTER PLAN — NOT A LIVE RELEASE**
Machine schedule: `docs/redevelopment/2026-07-28-town-expansion/westward-paired-parks-masterplan.json`

---

## Executive decision

Build two original parks facing one another across a new north-side Westlight parkway:

- **Northwind Water Gardens** occupies the existing water shelf north of the road at x `-672..-520`, z `-720..-674`.
- **Ravencrest Adventure Grounds** occupies the dry, hilly land south of the road at x `-672..-520`, z `-650..-520`.
- **Adventure Exchange** is the common address at x `-610..-560`, z `-673..-651`; the Northwind gate faces south and the Ravencrest gate faces north.
- The **North Shore Parkway and Causeway** leaves the accepted approach road at `(-224,70,-496)`, passes east and north of the stadium, then travels west at z `-662`. Its full outer envelope stays south of z `-652`, while the protected stadium district begins at z `-640`.
- The crater remains a public lake/greenbelt hinge. The ticketed parks stop at x `-520`; a public green link occupies x `-519..-492`; the surveyed crater begins at x `-491`.
- **Harborlight Courts**, a three-project, 30-unit medium-density coastal neighborhood, occupies x `-518..-448`, z `-548..-470`. Its two smaller court buildings have attached four-bay garage wings and its large court building has an attached six-bay wing.

This arrangement resolves the “across from each other” requirement literally: the two independently operable gates share one orientation address and are visible from each other. It also avoids threading a new road through the stadium, Beacon Inn, the planned amusement pier, or the crater-lake loop.

---

## Source state and survey

The work used the immutable, read-only snapshot:

`data/worldsnap-town-expansion-complete-baseline-20260728T0315Z/region`

Directory hash using the repository’s canonical `filename + NUL + bytes + NUL` algorithm:

`0bb1faa61ca69724816afe682080e3a517fa974ec1300c3651e399ea03505501`

It also opened `data/world-map.db` read-only at SHA-256:

`1bd71512b9246b67b25a7fff91cd0745eb47d089e66fa15ee7ab23a41b21a503`

The parcel survey sampled every second x/z column, ignored foliage when finding structural support, measured water at y `62`, and inventoried block entities through the full world height.

| Parcel | Bounds x / z | Sampled columns | Water at y62 | Support y |
|---|---|---|---|---|
| Northwind Water Gardens | `-672..-520 / -720..-674` | 1,848 | 54.4% | 38–65; median 61 |
| Ravencrest Adventure Grounds | `-672..-520 / -650..-520` | 5,082 | 5.0% | 43–115; median 75 |
| Adventure Exchange | `-610..-560 / -673..-651` | 312 | 18.3% | 38–70; median 65 |
| Harborlight Courts | `-518..-448 / -548..-470` | 1,440 | 0.0% | 58–77; median 70 |

The conclusion is unusually clean: the water park goes on the water shelf, and the dry park goes on the dry ridge. The water park will read as an intentional pile-deck district, while the dry park can use terrain for its coaster rather than fighting it with one giant flat platform.

### Protected block entities and generated fabric

The most important finding is a surface ruined portal in Ravencrest:

- observed fabric: x `-632..-610`, y `81..98`, z `-621..-599`;
- protected no-target envelope: x `-637..-605`, y `77..102`, z `-626..-594`;
- empty chest at `(-620,93,-612)`;
- 549 netherrack, 39 magma, 14 obsidian, one crying obsidian, one gold block, 36 stone-brick-family blocks, and the chest.

DRAFT · NOT AS-BUILT

chest is part of a future operation.

Three deep generated groups also require explicit exclusions:

- two chests and a spawner around `(-617,-45,-710)` beneath Northwind;
- a spawner and chest around `(-559,-35,-590)` beneath Ravencrest; and
- a chest at `(-494,39,-555)` beside/beneath the crater's west edge.

Northwind foundations may not extend below y `38`. Ravencrest excavation in the deep-dungeon quadrant may not extend below y `55`. The crater-water package must prove no hydraulic route to the chest at `(-494,39,-555)`.

### Database and cross-package conflicts

An inclusive AABB test against every `world_features` row found:

- zero intersections for Northwind;
- zero for Ravencrest;
- zero for Adventure Exchange;
- zero for the crater west green link;
- zero for Harborlight Courts; and
- zero for the new road after its authorized tie-in.

The tie-in intentionally intersects only `approach-road:DISTRICT` and `APPROACH-ROAD:PRIMARY`.

The planned amusement pier is far southeast at x `-428..-274`, z `-445..-318`. None of the new park, housing, greenbelt or parkway envelopes intersects it. This work therefore supports, rather than competes with, the stadium/pier redesign.

---

## Precedent research and transferable lessons

### Adventureland and Adventure Bay

The official Adventureland map shows a readable front gate, Main Street, Town Square, train station, family rides, major thrill rides, indoor attractions, food clusters, picnic space and a concentrated water-park zone. The current Adventureland ride inventory describes a deliberately broad mix: nearly 50 rides and seven coasters, but also small-family rides, a train, classic rides and indoor experiences.

The current Adventure Bay overview combines a large wave pool, lazy river, slides and young-family play. The lesson is not to copy its names or shapes. It is to make a water park with multiple reasons to stay, clear age/intensity choices, and support distributed near the attractions.

Transfer to this plan:

1. Ravencrest has a gate street, family grove, coaster, indoor dark ride, flat-ride midway, event/food court and a compact circulation loop.
2. Northwind has wave, river, slide, family and quiet-water districts plus its own bathhouse and plant.
3. Both parks have multiple day/night anchors. Neither is a one-object park.

### Worlds of Fun and Oceans of Fun

The official 2026 Worlds of Fun/Oceans of Fun map shows two separately named main entrances, multiple dry-park districts, distributed dining and restrooms, an internal railroad, water-park bathhouses, first aid by the water attractions, rentals, guest services and ride-access information. The current operator overview describes a large park organized as distinct themed areas rather than one undifferentiated midway.

Transfer to this plan:

1. Northwind and Ravencrest share an address but can open, close and secure independently.
2. Every district has an identity, support point and route back to the gate.
3. Guest, service and emergency systems are drawn separately.
4. The common map and arrival exchange tell visitors which gate they need before they enter a queue.

### Accessibility, operations and water safety

The United States Access Board amusement-ride guide requires continuous accessible routes to load/unload areas, stable and level load surfaces, turning space and access signage. It identifies 1:12 as the normal maximum ramp slope and says the special 1:8 ride exception does not apply to the queue.

Minecraft translation:

- all primary guest loops are at least seven clear blocks;
- all pool-perimeter and emergency-return walks are at least five clear blocks;
- terrace changes on the primary system use slab ramps and landings targeted at no steeper than 1:12;
- ordinary steep stairs can supplement but never replace the primary route;
- load/unload floors are level, and every queue has a signed route that does not require backtracking.

DRAFT — NOT AS-BUILT — LIVE CLOSEOUT GATES PENDING

depth marking and lighting. Northwind translates that into separate contained shells, a represented plant/isolation room for each operating group, barriers at every non-entry edge, visible basin bottoms, depth/no-diving signs and independent rollback.

The CPSC amusement-ride standards page links ride safety to the ASTM F24 family of voluntary engineering standards. This plan therefore defines every ride as track/structure plus station, queue, maintenance, evacuation and clearance—not decorative rails floating in space.

---

# Selected plan and rejected alternatives

## Selected: facing parks on opposite sides of the north causeway

This layout earns the recommendation because it:

- places water uses on a water shelf and dry rides on dry land;
- produces literal facing gates;
- lets one new road serve both parks without crossing either park;
- gives the stadium a coherent north ring/causeway;
- leaves the crater as a connected green hinge;
- avoids every protected database feature; and
- gives each park an outer service edge.

## Rejected: both parks side by side west/east

This version put their gates across a narrow central spine, but an approach from Westlight had to travel through the eastern park before reaching the shared arrival. That would mix public road, queues and water-park service movements.

## Rejected: direct west road through the existing stadium main district

Beacon Inn, the shop row, the stadium footprint and the planned amusement pier leave no credible surface-road corridor. A road through them would demolish accepted buildings or consume the future pier mall.

## Rejected: giant flat reclaimed platform

Mass fill would erase the useful ridge, make Northwind read as arbitrary reclamation, create a very large fluid-edge transaction and repeat the same “floating object” problem now being corrected in Westlight. The selected plan uses pile decks, bridges and terrain-following zones.

---

# North Shore Parkway and Causeway

Centerline, with y expressed as standing level:

| Station | x | y | z | Role |
|---|---|---|---|---|
| 0+000 | -224 | 70 | -496 | accepted-road tie-in |
| 0+025 | -248 | 71 | -500 | land transition |
| 0+187 | -248 | 68 | -662 | east causeway turn |
| 0+383 | -444 | 68 | -662 | north stadium causeway |
| 0+439 | -500 | 68 | -662 | north crater greenbelt |
| 0+499 | -560 | 68 | -662 | arrival approach |
| 0+549 | -610 | 70 | -662 | Adventure Exchange |

The road has 11 clear carriageway blocks, one-block curbs, a five-block independent greenway on the south/east side and a two-block landscape separator. Its maximum total half-width is ten blocks. Water spans use pile bents and a support deck at y `67`; they do not mass-fill the lagoon.

The baseline is water at the sampled causeway nodes `(-248,-662)`, `(-444,-662)` and `(-500,-662)`, then returns to land near `(-560,-662)`. That is an engineering instruction: the road is a causeway/bridge object with explicit spans, not a dirt embankment.

---

# Adventure Exchange

The shared arrival occupies x `-610..-560`, z `-673..-651`. The carriageway is centered at z `-662`; a raised pedestrian table occupies x `-602..-568`, z `-667..-657`.

DRAFT — NOT AS-BUILT — LIVE CLOSEOUT GATES PENDING

independent.

- ticket/security;
- guest services and accessibility;
- family care;
- first aid;
- rentals/lockers;
- height/admission check; and
- staff control.

This is operationally better than one shared gate: either park can close without creating an unsecured connection into the other.

---

# Northwind Water Gardens

The park is an original wind-and-water garden on a public pile deck at support y `64`, standing y `65`. The active-water top datum is y `64`; natural water at y `62` remains outside the active shells.

| ID | Attraction | x | z | Program |
|---|---|---|---|---|
| NW-WAVE | Breaker Basin | -669..-638 | -710..-682 | wave basin, beach ramp, guards, isolated plant |
| NW-FAMILY | Kestrel Splashworks | -669..-638 | -678..-674 | young-family splash and family-care link |
| NW-RIVER | Tidelace River | -634..-594 | -713..-682 | closed river, two accessible entries, dry perimeter |
| NW-SLIDES | Rainspine Slides | -590..-558 | -713..-681 | tower, three runouts, queue and evacuation stair |
| NW-QUIET | Bluewater Coves | -554..-522 | -696..-674 | quiet pool, cabanas, sensory rest and outlook |
| NW-PLANT | Water plant/service | -554..-522 | -718..-700 | pumps/filters/isolation, shop and storage |
| NW-BATH | Bathhouse/gate services | -634..-594 | -680..-674 | changing, lockers, first aid and admissions |

The seven-block guest loop connects every attraction. A five-block service route runs on the east edge at x `-526..-520`; the independent emergency return runs along z `-720..-714`.

Every active venue must be independently enclosed and isolatable. No active water source may share an open face with the natural water. Fixed before/after sections must prove the wall, floor, waterline, deck, barrier and plant relationship.

---

# Ravencrest Adventure Grounds

Ravencrest is a ridge-and-foundry park, not a level midway stamped over the terrain. Its public system works between three primary standing levels:

- Gate Terrace y `68`;
- Midway Terrace y `76`; and
- Ridge Terrace y `84`.

| ID | Attraction | x | z | Program |
|---|---|---|---|---|
| RC-GATE | Lantern Gate / Founders Avenue | -608..-566 | -650..-630 | gate street and visitor support |
| RC-COASTER | Ridge Runner | -670..-640 | -632..-540 | terrain coaster and full evacuation walk |
| RC-EMBER | Ember Gate Ruin Garden | -637..-605 | -626..-594 | protected ruin and external overlook |
| RC-MIDWAY | Lantern Midway | -604..-566 | -628..-570 | three flat rides, food, games and night axis |
| RC-FAMILY | Rookery Family Grove | -562..-524 | -626..-566 | carousel, small vehicles, play and quiet seating |
| RC-DARK | Foundry Hollow | -635..-606 | -580..-542 | indoor story ride and independent exit |
| RC-SIGNAL | Signal Drop | -612..-596 | -540..-524 | high-point observation/drop landmark |
| RC-EVENT | Meadow Court | -592..-548 | -558..-524 | event lawn, stage, food and weather shelter |
| RC-MAINT | Maintenance compound | -670..-646 | -538..-522 | coaster shop, stores, staff and loading |

Ridge Runner’s station occupies x `-668..-646`, z `-608..-584`, y `74..86`. The track uses the western terrain so it stays clear of the Ember Gate no-target envelope. It must have a coherent station → lift → crest → drop → supported turn → brake/return sequence, a complete evacuation walk and a maintenance spur.

DRAFT · NOT AS-BUILT

DRAFT — NOT AS-BUILT — LIVE CLOSEOUT GATES PENDING

controlled Gate Terrace crossing.

## Crater greenbelt integration

The park parcels end at x `-520`. A public green link at x `-519..-492`, z `-638..-520` joins:

- Ravencrest east exit `(-520,72,-580)` to the crater west promenade;
- parkway `(-500,68,-650)` to the crater north loop; and
- the crater southwest loop to Harborlight Courts.

The route is public and outside both ticketed parks. The road remains north of the crater, so the lake never becomes a traffic island. The planned pier, stadium and crater green space remain a separate but connected destination sequence.

## Harborlight Courts

The surveyed housing parcel is fully dry, has no block entities and has a manageable support range of y `58..77`. The neighborhood keeps the public lake walk outside its private thresholds at z `-555..-549`.

The architecture is an original medium-density coastal-gabled language: light stone/quartz masonry, timber, slate or restrained copper roofs, porches, hedges and planted courts. It is “Hamptons-like” in material restraint, porch/gable rhythm and landscape—not a copy of a specific residence.

| Project | Bounds x / z | Homes | Floors | Central green | Attached garage |
|---|---|---|---|---|---|
| Sea Hedge Court | -516..-487 / -547..-514 | 8 | 3 | -505..-494 / -539..-526 | 4 bays |
| Bayberry Court | -482..-450 / -547..-514 | 8 | 3 | -472..-459 / -539..-526 | 4 bays |
| Dune House Commons | -516..-450 / -506..-472 | 14 | 3 | -491..-474 / -496..-480 | 6 bays |

All three garage wings physically touch their parent building. Garage doors face Bayberry Lane/service access, never the lake. No private lot interrupts the public waterfront route.

## Operations and route separation

Each park needs three networks:

1. **Guest:** continuous seven-block primary loop; no service dead ends.
2. **Service:** outer five-block route to every ride, kitchen, plant and maintenance room without running through a queue.
3. **Emergency:** a return path from every load platform and attraction high point to a gate/first-aid location.

Attractions cannot share one ambiguous exit. The database must record each queue, load/unload point, accessible entry, service route and evacuation path as a child of the exact attraction.

## Build sequencing

The safe engineering order is:

1. refresh snapshot, world database and cross-package target register;
2. protect the four block-entity groups and Ember Gate fabric in code;
3. release the causeway substructure and independent greenway;
4. release Adventure Exchange and prove both gates;
5. release Northwind deck/plant before any active water shell;
6. release and leak-test one contained water venue at a time;
7. release Ravencrest terraces and guest/service loops;
8. release one complete ride object at a time, including evacuation;
9. release crater link and Harborlight streets/public lake walk;
10. release each housing court with its attached garage in the same transaction;
11. take an immutable post snapshot and run independent object, route, water, rollback, database and media QA.

No phase may replay an older accepted forward file.

DRAFT — NOT AS-BUILT — LIVE CLOSEOUT GATES PENDING

## Acceptance and evidence

A physical release is accepted only after:

- a fresh same-moment snapshot and hash;
- exact source guards and exact rollback;
- zero unexplained protected-feature, block-entity, fluid-neighbor or package intersections;
- live entity/player clearance;
- contained-water simulation and post-state leak census;
- ride support/clearance/queue/maintenance/evacuation QA;
- bidirectional normal-walk QA for both gates, every guest loop, attraction, service path, greenway, housing street and public lake path;
- matched before/after maps and exact-object captures;
- world-feature/room/route/media import with foreign-key integrity; and
- publication to Sites and Box only after the as-built evidence passes.

Required publication material includes a westward regional master map, road station/bridge plan, paired-gate plan, both park plans, water-containment sections, ride-clearance diagrams, crater/greenbelt/housing plan, floor plans and exact database-to-screenshot relationships for every attraction and housing building.

DRAFT · NOT AS-BUILT

DRAFT — NOT AS-BUILT — LIVE CLOSEOUT GATES PENDING

# Worker Town Role-Cottage Mini-Mansions — Manager Vale Garage Addendum

**Status:** coordinate design and offline validation complete; not a build release and not a live-world completion claim.
**Authoritative offline baseline:** `data/worldsnap-town-expansion-prerelease-20260728T0930Z/region`, SHA-256 `f9a6a21ec115bd556d7626a9b18151b38d1d4f145226c9e3f741de636528eb8e`. The exact old-to-fresh state and protected-NBT reconciliation is recorded in `evidence/town-expansion-fresh-snapshot-repin-audit.json`.
**Machine schedule:** `worker-town-all-role-cottages-mini-mansion-coordinate-schedule.json`, schema `3.0.0`.
**Binding garage correction:** five physically attached automotive garages, exactly **24 bays**: Architect 6, Steward 6, Mason 4, Surveyor 4 and Scott/`RRCH-SCOUT` 4. A service or carriage room counts as zero automotive bays.

## Executive decision

All five mid-level-management residences relocate to a coordinated neighborhood called **Manager Vale**. Trying to leave any one of them in place fails the combined requirement for a larger house, a physically attached four- or six-car garage, a usable apron and turning envelope, a safe pedestrian entrance and a connected vehicle street.

This is a deliberate relocation decision, not convenience:

| Source residence | In-place constraint | Binding resolution |
|---|---|---|
| Architect | constrained civic lane and documented water at `(-121,67,-366)` | move to upper Manager Vale; retain the old shell as a design archive and preserve the water |
| Steward | civic frontage and documented water at `(-115,67,-336)` | move to upper Manager Vale; retain the old shell as a records/services cottage and preserve the water court |
| Mason | west canal and Grange-owned/ambiguous south-edge cells | move south of R07; preserve canal, coping, walk and Grange cells |
| Surveyor | pinched between Storehouse, Moot Hall and public paving | move north of R07; adapt the old shell as a map pavilion after NBT reconciliation |
| Scott / historical `RRCH-SCOUT` | existing 65-column overlap with Market Hall | move north of R07; remove only independently attributed Scout fabric and preserve Market/ambiguous cells |

Every selected Manager Vale parcel and the three road envelopes were resurveyed against the immutable snapshot. The selected extents contain **zero surface-water columns and zero block entities**. Natural height variation is retained outside explicit building, apron and carriageway cells.

## Corrected five-cottage census

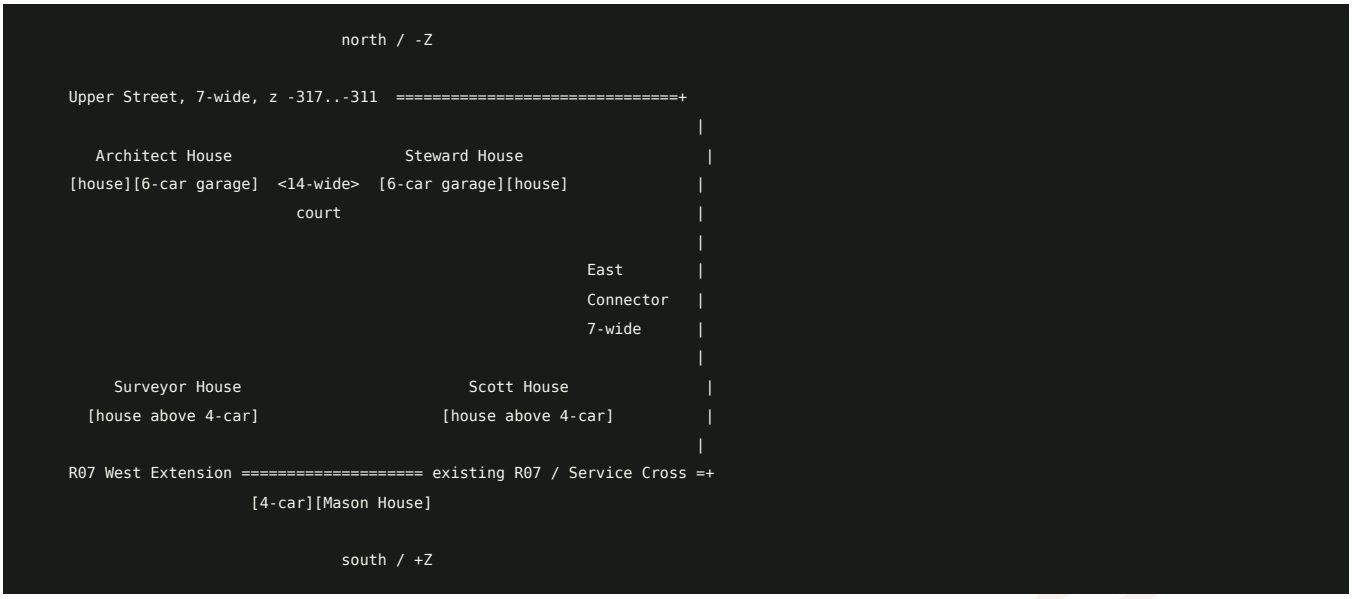
| Historical/external object | World feature ID | Town building ID | Current inclusive bounds | Protected block entities |
|---|---|---|---|---|
| `RRCH-ARCHITECT` | `wft_220824ed60db1af7` | `bld_handbuilt_0` | `[-124,67,-380,-112,77,-370]` | 7 |
| `RRCH-MASON` | `wft_fdb1a03cd6ec1b4a` | `bld_handbuilt_1` | `[-58,67,-380,-46,77,-370]` | 10 |
| `RRCH-SURVEYOR` | `wft_930a8db31b6cb14e` | `bld_handbuilt_2` | `[-91,67,-407,-79,77,-400]` | 6 |
| `RRCH-STEWARD` | `wft_82ac911e83071c18` | `bld_handbuilt_3` | `[-118,67,-350,-106,77,-340]` | 9 |
| `RRCH-SCOUT` (historical alias; public label **Scott House**) | `wft_a15eecb25e08cc19` | `bld_handbuilt_4` | `[-64,67,-350,-52,77,-340]` | 9 |

The frozen protected-state ledger totals **41 block entities**: 10 chests, 9 barrels, 11 bed blocks, 7 furnaces, 3 lecterns and 1 chiseled bookshelf. The schedule lists every exact source coordinate. No inventory-bearing object may be broken and reconstructed from a guessed item list.

DRAFT · NOT AS-BUILT

DRAFT — NOT AS-BUILT — LIVE CLOSEOUT GATES PENDING

# Ranger Vale master plan



The diagram is schematic; the JSON coordinates are authoritative.

### Vehicle network

| Segment | Inclusive envelope | Finished centerline and engineering rule |
|---|---|---|
| Upper Street | `[-145,45,-317,-49,100,-311]` | seven-wide; grade nodes run y `68..70` along z `-314` |
| East Connector | `[-55,45,-310,-49,100,-215]` | seven-wide; descends from y `70` to y `64`; no steeper than 1:5, using ten-block transition runs |
| R07 West Extension | `[-132,45,-221,-84,100,-215]` | seven-wide at nominal y `64`; joins existing R07 at `(-84,64,-218)` |
| Upper Garage Court | `[-105,45,-310,-92,100,-282]` | fourteen-wide slow-speed shared court; Architect doors face east, Steward doors face west |

Upper Street was moved onto the surveyed `68..71` contour. A rejected straight route through z `-277..-269` crossed a ridge with surface values up to y `89`; representing that as a normal street would have required an implausible slab or unsafe grade. The chosen East Connector follows the gentler eastern descent. The future compiler may lengthen a grade transition but may not steepen it.

Pedestrians do not enter through garage doors. Architect and Steward have raised entry crossings from Upper Street. Surveyor, Scott and Mason have side walks that reach their public doors without using a backing aisle. Every residence still has a broad main stair and a remote second stair; ladders are not primary circulation.

## Exact garage program

| House | Destination reservation | Occupied building envelope | Attached garage | Door orientation | Bays |
|---|---|---|---|---|---|
| Architect | `[-145,45,-310,-99,110,-282]` | `[-144,69,-309,-106,96,-283]` | `[-118,69,-309,-106,76,-284]` | east into shared court | 6 |
| Steward | `[-92,45,-310,-49,110,-282]` | `[-91,69,-309,-58,92,-283]` | `[-91,69,-309,-79,76,-284]` | west into shared court | 6 |
| Surveyor | `[-130,45,-259,-94,110,-222]` | `[-129,64,-258,-95,88,-233]` | `[-129,64,-245,-112,71,-233]` | south to R07 extension | 4 |
| Scott / `RRCH-SCOUT` | `[-82,45,-259,-57,110,-222]` | `[-81,64,-258,-58,88,-233]` | `[-81,64,-245,-64,71,-233]` | south to existing R07 | 4 |
| Mason | `[-130,45,-214,-94,110,-174]` | `[-129,64,-203,-95,88,-175]` | `[-129,64,-203,-112,71,-191]` | north to R07 extension | 4 |

Each counted bay has its own inclusive interior rectangle and its own exterior door opening in the schedule. Each garage shares a wall plane with an occupied house component and has a separate house-access door through a small fire lobby. Each also has a declared apron, turning envelope and polyline to the street. Decorative carts, maintenance alcoves and storage areas do not add to the count.

DRAFT — NOT AS-BUILT — LIVE CLOSEOUT GATES PENDING

## House and floor plan program

The five houses share a neighborhood language—local stone/cobble stepped plinths, muted plaster, dark timber framing, steep deepslate roofs, restrained copper and warm lanterns—but they are not clones. Roof breaks, garage placement, entry rhythm, role rooms and garden orientation vary.

### Architect House

The west occupied wing and east six-car garage form an L-shaped mansion. The garage and front rooms use the lower y `69` datum; planted stone plinths step the house into the western rise rather than shaving down the parcel.

- Ground: entry/stair reception, drafting/model studio, client office/archive, great room, formal dining and kitchen/pantry/scullery.
- Upper: primary suite, design library, two guest/family bedrooms and the furnished adult private suite.
- Exterior: south covered patio and a stepped design garden.

### Steward House

The west six-car garage and east occupied wing mirror the Architect court without mirroring its room plan. The source cottage's records identity moves into a purpose-built office rather than disappearing.

- Ground: entry/stair, steward office/records counter, great room, formal dining, kitchen/pantry/scullery and household sitting/service room.
- Upper: primary suite, two guest/family bedrooms, manager library and furnished adult private suite.
- Exterior: south patio, planted rear court and a separate remote stair.

### Surveyor House

Surveyor is an L-shaped two-floor residence on the broad y `64` bench. The four-car garage occupies the southwest lower wing; the east occupied wing gives it a real internal connection. The isolated higher north-west contour remains a planted lookout mound.

- Ground: map studio, field office/archive, stair lobby, great room, dining and kitchen.
- Upper: primary suite, chart library, two guest/family bedrooms, sitting/linen room and furnished adult private suite.
- Exterior: lookout garden, short planted steps and side pedestrian entry.

### Scott House

Public signs and resident-facing records say **Scott House** and **Scott**. `RRCH-SCOUT` remains the stable historical/external alias until cottage, room, resident, media and route foreign keys can be migrated atomically. This prevents another name split and does not create a second resident.

- Ground: field-gear/drying room, stair lobby, route-planning office, great room, dining and kitchen.
- Upper: primary suite, two guest/family bedrooms, briefing library and the largest furnished adult private suite.
- Exterior: scouting garden on the retained north/east contour and a side pedestrian entry.

### Mason House

Mason stands south of R07 on the naturally flat y `64` bench. The four-car garage faces north while the house and patio extend south. Shallow swales, specimen trees and a two-step rear garden prevent the site from becoming a grass slab with a box on it.

- Ground: side entry, broad stair lobby, clean masonry studio, great room, dining and kitchen.
- Upper: primary suite, two guest/family bedrooms/sample library and furnished adult private suite.
- Exterior: south covered patio and planted material-sample garden.

The machine schedule freezes **55 named rooms**: Architect 11, Steward 11, Mason 10, Surveyor 12 and Scott 11. Same-level room rectangles have zero intersections and every room is inside its building envelope.

---

# Adult private-suite design

The desired theme is expressed through the plan, furniture, color, privacy and material detail—not figures or explicit depictions. Every house has one adults-only suite containing:

- a privacy vestibule that breaks the view from the household corridor;
- an oversized canopy/four-poster bed platform with two-block-clear circulation;
- a chaise or upholstered lounge;
- one suspended lounge chair on an independently rated frame;
- deep-red textiles, dark wood, blackened metal, layered curtains and low warm lighting;
- a dressing vanity and screen;
- closed, lockable toy/prop cabinetry with nothing graphic displayed;
- a private wash/cleanup niche with cleanable finishes.

DRAFT · NOT AS-BUILT

DRAFT — NOT AS-BUILT — LIVE CLOSEOUT GATES PENDING

a role office, kitchen, family bedroom, public lane or scheduled exterior camera. Evidence images may document architecture and furniture only after privacy/content review.

## Protected-object and source-site migration

The relocation transaction must use this order for every house:

1. read complete source block-entity NBT and inventory;
2. hash and record source coordinate/state/NBT;
3. construct and validate the destination room and its exact receiving coordinate;
4. write destination NBT and verify the after hash;
5. only then alter independently owned source-shell cells;
6. revision the database object and room geometry atomically;
7. retain old/new object, room and media crosswalks.

Special source exclusions remain binding:

- Scout/Market Hall's 65-column overlap requires cell attribution; Market-owned and ambiguous cells are untouchable.
- Mason's canal, coping, walk and Grange shared edge remain intact.
- Architect's and Steward's documented water columns remain contained at their old sites.
- Surveyor's old pavilion conversion may not narrow the Storehouse-to-Moot public route.

## Evidence contract

The schedule freezes **45 camera candidates**, nine per house:

- matched source-site before/after;
- matched destination-site before/after;
- garage doors, apron and street relationship;
- garden/patio and terrain treatment;
- ground-floor role-to-household view;
- upper-floor bedroom/gallery view;
- non-graphic adult-suite furniture context.

Every matched pair must preserve eye, look-at, FOV, time and weather. A discovered PNG is not assigned to an object by filename alone.

## Offline design validation

The schema `3.0.0` schedule passed the coordinate/count validator:

| Check | Result |
|---|---|
| role residences | 5 |
| relocated residences | 5 |
| physically attached garages | 5 |
| exact automotive bays | 24 |
| bay capacities | 6 + 6 + 4 + 4 + 4 |
| individual door openings | 24 |
| house/garage shared walls | 5 |
| garage/house access doors | 5 |
| aprons and turning envelopes | 5 + 5 |
| street routes | 5 |
| protected source block entities | 41, all unique |
| named rooms | 55 |
| same-level room intersections | 0 |
| evidence cameras | 45 |

DRAFT · NOT AS-BUILT

| DRAFT — NOT AS-BUILT — LIVE CLOSEOUT GATES PENDING | |
|---|---|
| selected-parcel/road water columns | 0 |
| selected-parcel/road block entities | 0 |

This PASS validates the design schedule only. It does not claim that terrain, roads, houses, inventories, databases or screenshots were changed.

### Compiler second-pass correction — 2026-07-28

The dedicated exact-cell compiler initially failed closed on one unreviewed interface: the Scott House remote-stair box reached east to `x=-55` and placed a tread in the East Connector's cleared vehicle headroom at `(-55,67,-252)`. The same review also found that the Steward remote-stair box extended beyond its house shell, and that the Mason remote stair offered only seven straight run cells for an eight-block rise.

The coordinate schedule was corrected before any release:

- Scott remote stair: `[-63,64,-252,-60,80,-245]`;
- Steward remote stair: `[-63,69,-291,-60,85,-284]`; and
- Mason remote stair: `[-128,64,-182,-125,80,-175]`.

All ten stair systems now remain inside their parent building shell and compile as two-block-wide straight runs with one-block-per-tread grade, two-block headroom, level-floor landings and required bidirectional post-state walking tests. The compiler separately classifies every internal model override and requires zero unreviewed cross-scope overrides.

---

## Release gates

No live execution is authorized by this addendum. A build package remains blocked until:

1. a fresh same-moment immutable snapshot reproduces the five source objects, 41 protected block entities and selected dry destination conditions;
2. every changed cell has an exact source-state guard and bijective rollback;
3. all 41 NBT transfers have source/destination hashes and zero loss or duplication;
4. all 24 bays pass door-to-street vehicle sweeps and all pedestrian entries pass bidirectional normal-walk tests;
5. the East Connector proves a maximum 1:5 grade with two-block headroom and no whole-reservation flattening;
6. Market, Grange, canal, water and civic-route exclusions pass;
7. all 55 rooms, ten stair systems and five private suites pass geometry, furnishing, privacy and egress review;
8. Scott/`RRCH-SCOUT` reconciles one resident to one cottage with no orphan or duplicate;
9. all 45 cameras, matched pairs, floor plans, database imports and second-pass visual defect review pass.

DRAFT — NOT AS-BUILT — LIVE CLOSEOUT GATES PENDING

# Gilded Raven Theatre House and Owner Corridor

**Decision state:** implementation-ready coordinate plan; not a live build authorization
**Content boundary:** fictional adults-only venue architecture, kept non-graphic
**Machine schedule:** `worker-town-gilded-raven-theater-owner-tunnel-coordinate-schedule.json`
**Survey evidence:** `evidence/worker-town-theater-owner-tunnel-survey.json`
**Immutable survey baseline:** `e612b1feabcf8bd81e427804e0c5cdccea5aac79ef543cadbf2b05d360de7a5a`

---

## Executive decision

Build the **Gilded Raven Theatre House** as Worker Town's most expensive traditional landmark at `x=-34..18, z=-402..-350`. Its ornate south marquee faces a new entry court and completes the town's open eastern edge. The public experience progresses from marquee to lobby, restaurants and a 168-seat traditional bowl with two horseshoe/U-shaped balconies, open vomitories and a real stage. Five separate five-person salons and four one-to-one mini theatres sit on B1. The architecture communicates an adults-only live-performance house without depicting explicit anatomy or acts.

Three hidden circulation systems remain physically separate:

1. a discoverable public mystery promenade;
2. a performer-only stage/dressing loop;
3. an owner-only route to a new grand descent.

The owner route is **not T2B**. It is a new 928-block-long, level, five-by-five-clear corridor at `floorY=-44`, with a nine-block construction width, a utilities band, continuous lighting, low-level egress lighting, repeated wayfinding and seven large rest suites. The selected corridor, its face-adjacent halo, every rest suite, both vertical cores, the sales office and the mansion arrival gallery are dry and free of block entities on the immutable snapshot.

The route terminates inside the owner mega-mansion. The dry vertical ascent at `x348..377,z150..180` is not a detached destination: its dry ceremonial gallery runs west through `x269..348,y109..120,z156..174` and deliberately joins the implemented east mansion wing at `x269..270`. The only planned-package overlap is the 276-cell authored interface at that door/gallery connection.

---

## Why this site

The existing Ravensreach/Worker Town block pattern leaves its eastern edge unresolved. The selected building occupies that edge without touching the Grange, Market, Moot Hall, expanded library, Great Guild Hall or new civic grounds.

- Building target: `x=-34..18,y40..110,z=-402..-350`
- Marquee: `x=-17..1,y70..86,z=-349..-344`
- Entry court: `x=-30..14,y64..82,z=-349..-340`
- Surveyed surface: `3721` columns, median surface `y71`, zero water columns
- Building volume: zero fluids and zero block entities
- Two existing beds at `(-36,70,-348)` and `(-36,70,-349)` are outside every target and remain protected.

The earlier `z=-404` north edge was rejected because it touched five south-reflecting-pool target cells and four civic-ground cells. Moving the building to `z=-402` produces zero planned-package overlap.

---

## Architectural source of truth

The theatre is an original late-Victorian/Edwardian composition rather than a copy of one real building. Brick, red terracotta, dark oak, stone, copper and gilt give it the "all the money in town went here" character. The street front gets a centered canopy marquee, sign tower, illuminated letter band, ticket windows, poster cases and a broad sheltered threshold. Behind that front, the taller stage house reads honestly as a theatre volume.

Theatres Trust explains that theatre buildings are systems of auditorium, stage house, front of house and back of house; it also identifies stalls, circles, boxes, vomitories, wings, dressing rooms and technical spaces as distinct working parts. The layout uses those relationships directly. Its historical overview notes the development of horseshoe balconies, grand illuminated entries, rich stairs and more luxurious social areas.
Theatre Spaces: An Introduction, What spaces make up a theatre?, How theatre design changed

DRAFT — NOT AS-BUILT

DRAFT — NOT AS-BUILT — LIVE CLOSEOUT GATES PENDING

proscenium as character-defining. That supports a proper arrival sequence and stage-focused room instead of another generic hall. [NPS theatre character-defining features]

### Main house

The auditorium occupies `x=-29..13,y70..98,z=-397..-362`. A stage at `x=-19..3,z=-401..-390` and apron at `x=-16..0,z=-389..-385` are constructed before any seat.

The selected capacity is intentionally believable for a small, rich town house:

- 96 stalls;
- 48 dress-circle seats;
- 24 grand-circle seats;
- 168 seats in the main house;
- 25 additional seats across five five-person salons;
- four one-to-one rooms.

The dress circle is a horseshoe around the bowl. The grand circle is a shallower U. Four open side vomitories and one open south-center vomitory connect directly into a broad perimeter ring. They are not small doors into blind hallways. Balcony fronts use layered dark wood, gilt/copper grilles and low warm lamps. The coffered ceiling and chandelier crown fill `y94..105`.

Every fixed seat must be laid out only after the stage, backdrop and lighting frame exist. The acceptance camera stands at each outer seat row and must show the stage center without facing a wall or doorway.

### Restaurants

Four restaurant/dining zones keep the room socially active rather than wrapping it in empty corridors:

- west two-level supper restaurant beside the stage;
- east two-level dining gallery beside the stage;
- southwest street dining salon;
- southeast street dining salon.

Both stage-side restaurants have their own service pantry and a B1 connection to the production kitchens. Public routes connect every dining level to the main lift. Sound lobbies protect the auditorium while keeping the public ring visually open.

### Five-person salons and one-to-one rooms

Five rooms on B1 each hold a five-person audience and one small non-graphic presentation stage. Four further rooms hold one guest each. The program is architectural: platform, correctly aimed seat(s), acoustic vestibule, performer-side service door, wash point, closed storage and an accessible turning zone.

Privacy never defeats life safety. A room opens from the inside without a key, tool or hidden puzzle. None is a required exit path. Each has a staff-visible occupied/status light outside without an interior sightline.

### Hidden routes

The public mystery promenade is a discoverable, accessible route behind bronze panels. It is at least three blocks clear by five high and returns to public foyer space at three locations. It has no long blind dead end.

The performer loop connects dressing, green room, laundry, kitchens, wings and stage. It uses two independent stairs and never shares an owner door.

The owner route occupies the deeper B2 band and enters through a two-door gilded vestibule in the owner salon. No public, performer, service or utility hatch bypasses that vestibule.

---

## Stairs that are actually pleasant to walk

The old compact-stair pattern is rejected. The U.S. Access Board requires uniform treads/risers and prohibits open risers in covered egress stairs; its accessible-route guidance also says accessible vertical circulation belongs with the main stairs, not in an obscure back route. Minecraft cannot reproduce inch dimensions, so this plan uses a deliberately gentler conservative translation: **one block of rise for every two blocks of run**, closed risers, two rails, contrasting first/last nosings, six blocks of headroom and large turn landings. [Access Board stair guide], [Access Board accessible routes]

No primary route uses:

- a ladder;
- a trapdoor drop;
- alternating treads;

DRAFT — NOT AS-BUILT — LIVE CLOSEOUT GATES PENDING

- winders;
- two-block headroom;
- a turn without a full landing.

### Theatre grand descent

The hidden entrance first uses a ceremonial 6-rise/12-run flight from the owner salon at `y70` to the `y64` upper landing. Nine subsequent flights descend from `y64` to `y-44`. Every full flight rises 12 over a run of 24, is seven blocks clear, has six blocks of continuous headroom and turns on a broad cross-landing.

The full core is `x=-34..14,y=-46..67,z=-400..-383`. It is dry, its face halo is dry, and it contains no block entities. A minimum six-by-six lift car serves every 12-block landing beside the stairs.

The stair hall is intentionally extravagant after the hidden door opens: vaulted landings, district maps, dark stone, dark oak, copper rails, chandelier groups and a different artwork at every turn. “Secret” describes how the entrance is found; it does not justify bad circulation.

### Mansion ascent

The direct ascent studies were not acceptable:

- the west mansion/C01 columns contained protected inventories and a spawner;
- the north studies encountered water and trial/spawner equipment;
- an initial east study touched water;
- the `x310..339,z150..180` option was dry but sat too close to the planned C01 road alignment.

The selected `x348..377,z150..180` core and halo are dry and block-entity-free. Thirteen 12-rise/24-run flights climb from `y-44` to `y112`, again with seven-clear stairs and a lift at every landing.

The top does not open to an isolated tower. A fully dry, existing-air ceremonial gallery at `x269..348,y109..120,z156..174` enters the mega-mansion east wing at `x269..270`. This is a direct authored mansion room connection. The gallery is above the C01 road, east and above the portal rooms, and separate from the shelter utilities.

---

## Modern owner-corridor standard

The corridor is not a decorated mining bore. Its exact clear section is five wide by five high:

- finished walking floor: `y=-44`;
- clear volume: `y=-43..-39`;
- ceiling/liner: `y=-38`;
- overhead service band: `y=-37`;
- subfloor drainage/inspection band: `y=-46..-45`;
- utilities outside the five-clear walking zone;
- total construction width: nine blocks.

The centerline is level. All vertical movement occurs in the two grand stair-and-lift halls. At each turn, an eleven-by-eleven orientation chamber creates a deliberate pause and visible route choice.

FHWA’s tunnel guidance identifies clearance, drainage, ventilation, lighting, utilities, communications, signs and emergency equipment as integral cross-section elements. FTA guidance stresses adequate normal/emergency lighting, low-level visibility, consistent exit graphics, usable egress and avoidance of vertical ladders. The owner corridor adopts those principles at Minecraft scale. FHWA Road Tunnel Manual, FTA emergency-preparedness guidance

### Lighting and wayfinding

- warm ceiling lights at eight-block centers;
- low-level contrasting lights, staggered from ceiling lights;
- brighter turn nodes;
- independently switched emergency-color lights;
- destination, direction and remaining-distance signs every 32 blocks;
- floor compass and district color at every turn;
- two sequential metal doors at every controlled boundary;
- an inside release on every egress-side door.

No sign says only “tunnel.” It says where the traveler is going and how far remains.

### Utilities and refuge

The lined service bands carry separated normal/emergency lighting feeds, communication, ventilation supply/return, drainage inspection, and fire/medical cabinet niches. Maintenance panels never form a crawl bypass into a protected room.

DRAFT - NOT AS-BUILT

DRAFT — NOT AS-BUILT — LIVE CLOSEOUT GATES PENDING

translate that principle into the owner route. FHWA underground systems review

Each suite uses a premium stadium-suite-type hospitality program: lounge, table, pantry, single-user wash room, status wall, quiet alcove and medical/intercom cabinet. U.S. Bank Stadium's published premium program provides the group-suite/concierge precedent; these rooms are an original underground adaptation. U.S. Bank Stadium premium seating

Each also has a separate tasteful, non-graphic red-room annex: bed/lounge, closed accessory storage, decorative non-load-bearing swing/hammock frame, wash point, acoustic separation and a two-step privacy vestibule. The annex is never part of egress and depicts no act.

All seven suite envelopes have zero fluids and zero block entities. Where the census found gravity blocks, the release must pre-support and replace those cells top-down behind a temporary bulkhead before opening neighboring air.

---

# Isolation proof

The route is intentionally separate from every existing or planned civilian/security system:

- **T2B:** deprecated as a design and geometry source; no connection. Its x range is `-145..-136`, while this corridor begins at x `-14`.
- **Ravensgate:** the protected exclusion ends at x `-64`. The owner envelope begins at x `-14`, leaving 49 untouched X columns.
- **Library–Guild tunnel:** that route is at x `-110..-60`, y `58..64`, z `-442..-423`; there is no 3D intersection.
- **Known Raven Rock objects:** their lowest recorded floor is y `-14`. The owner service band ends at y `-37`, leaving 22 untouched layers.
- **Portal rooms:** at x `210..270`, y `78..88`, z `123..187`; the deep corridor is y `-46..-37`, and the ascent is x `348..377`.
- **Old C01:** the ascent is east of the old x `<=300` shell.
- **C01 road:** its target band is y `40..76`; the final westbound mansion gallery is y `109..120`.

No branch, door, shaft, utility chase or crawlspace may weaken these separations.

---

# Future owner-city reservation

The selected future city reservation is `x65..125,y-38..-20,z-280..-200`, directly above the corridor's `z=-230` leg. The whole reservation and its one-cell face halo are dry and contain no block entities. It is deliberately **not excavated now**.

The only built object is the Founders' Gallery Sales Office at `x78..106,y-46..-33,z-227..-204`. Its short branch enters from `(90,-44,-230)`. The office contains a reception desk, illuminated city model, parcel/status wall, material gallery, consultation room, pantry/wash and a sealed `OFFLINE / FUTURE OWNER CITY` presentation door.

Physical "marking" occurs through the model, four exact corner coordinates, elevation band and a no-excavation notice. Building streets or rooms would violate the user's instruction to plan the city but not build it yet.

---

# Survey results

| Selected object | Target cells | Fluids | Face-halo fluids | Gravity | Block entities |
|---|---|---|---|---|---|
| Theatre building | 199,439 | 0 | — | 1,157 | 0 |
| Theatre grand descent | 100,548 | 0 | 0 | 1,595 | 0 |
| Owner corridor | 85,150 | 0 | 0 | 2,102 | 0 |
| Future city reservation | 93,879 | 0 | 0 | 1,494 | 0 |
| Sales office | 9,744 | 0 | 0 | 220 | 0 |
| Mansion ascent | 147,870 | 0 | 0 | 1,659 | 0 |
| Mansion arrival gallery | 18,240 | 0 | 0 | 0 | 0 |

The gravity counts do not authorize blind excavation. They define a mandatory top-down pre-support ledger. Every changed cell still needs an exact source-state guard and exact rollback generated from a new same-moment snapshot.

The comparison against `town-expansion-r1-wip2.txt` found no overlap for the theatre, marquee, entry court, descent, owner corridor, rest suites, future-city reservation, sales office or dry ascent. It found exactly 276 intentional planned cells at the mansion-gallery/east-wing interface. The final regenerated package must repeat that test.

DRAFT — NOT AS-BUILT

## Construction order

1. Freeze all other town-expansion geometry and take a same-moment immutable snapshot.
2. Re-run target/halo fluid, block-entity, gravity, entity and protected-feature censuses.
3. Re-run exact cross-package intersections; permit only the reconciled mansion interface.
4. Build stabilized liners, gravity pre-support and closed utility/service bands before clearing interior walking air.
5. Build the theatre’s external shell, stage house, floors and two public egress cores.
6. Build the stage, apron, screen/backdrop and sightline references.
7. Build the bowl, balconies, open vomitories, restaurants and public foyers.
8. Build B1 salons, back of house and separated hidden route shells.
9. Build both grand stair-and-lift halls and bidirectionally walk-test every flight before connecting the corridor.
10. Build the deep corridor from sealed work faces in short exact-guarded sections.
11. Build each rest suite behind a closable vestibule.
12. Build only the sales office and sealed future-city marker; do not excavate the city reservation.
13. Build the dry east ascent, then the y109..120 ceremonial mansion gallery, reconciling its interface in the same owner-estate model.
14. Close every unintended cave/utility exposure, then run network-isolation tests.
15. Capture matched evidence and import the accepted features only after post-state QA.

---

## Acceptance

The package is not complete merely because blocks exist. Acceptance requires:

- all main-house and small-room seats face a built stage;
- all five open vomitories remain broad and open;
- public, performer and owner hidden routes have no unintended cross-connection;
- every stair uses the stated 1:2 geometry, landings, rails and headroom;
- every stair flight is walked normally in both directions without sprinting, flying, digging or towering;
- both lifts stop at every listed landing;
- the entire corridor and one-cell halo remain fluid-free;
- all gravity cells were handled through recorded pre-support phases;
- the future city remains unexcavated beyond its sales office;
- the arrival gallery visibly enters the owner east wing at x269..270;
- no T2B, Raven Rock, Ravensgate, civilian tunnel, portal, C01 or cave connection exists;
- matched before/after images cover every externally or internally distinct object.

DRAFT — NOT AS-BUILT

DRAFT — NOT AS-BUILT — LIVE CLOSEOUT GATES PENDING

# Worker Town Steward Mini-Mansions

**Inventory result:** one current steward cottage. `world-map.db` and `town.db` both identify the same object, `RRCH-STEWARD` / `bld_handbuilt_3`, at `x-118..-106, y67..77, z-350..-340`. No second current steward cottage was found.
**Decision:** expand it west and south into a two-story mid-management mini-mansion while preserving the town's material palette, setbacks and five-column lane to Moot Hall.
**Release status:** planning only; no live mutation.

---

## Site judgment

The existing 13-by-11 cottage is too small for a steward who works from home and receives residents. Its living room and office should remain recognizable, but become the public/service east wing of a larger house.

The selected reservation is `x-140..-106, y65..88, z-356..-324`. The new principal hall grows west, where it does not crowd Moot Hall. A covered patio and garden extend south. The survey found one wet surface column at `(-115,-336)`; instead of filling it blindly, the plan makes it the center of a tiny lined rain/water court.

The five clear columns `x-105..-101` remain the pedestrian lane between Steward House and Moot Hall. The north edge retains 13 clear columns to the Architect cottage. The patio may meet but cannot cross the recorded Ravensreach south boundary at `z=-324`.

---

## Architecture and program

Use the established Ravensreach language: stepped local-stone plinth, dark timber frame, restrained plaster panels, steep deepslate roof, small copper details and warm lanterns. The west hall is two occupied stories with a modest roof/attic silhouette; it should read as a senior cottage, not a palace competing with the Guild Hall or Moot Hall.

Ground floor:

- public steward office and records counter in the retained cottage;
- separate household sitting room;
- entry hall, cloak and main stair;
- great room and hearth;
- formal dining;
- family kitchen, pantry and scullery;
- garden gallery around the water court;
- covered outdoor dining/hearth patio;
- remote west exit and service yard.

Upper floor:

- primary bedroom/dressing/bath;
- two guest/family bedrooms;
- manager library and budget desk;
- laundry/linen;
- separated private red room and privacy vestibule.

An attached automotive garage is not appropriate here. The adjacent route is a pedestrian historic-town lane, not a proven vehicle street. A screened maintenance/wood-storage bay supplies the practical function without sacrificing the lane or period character.

---

## Private red-room standard

The private adult suite is tasteful, non-graphic and separated from the public office, kitchen and family bedrooms. Its dark-red/oxblood, dark-wood and blackened-metal palette supports privacy without explicit imagery.

Program:

- bed and lounge;
- concealed toy/storage cabinetry;
- decorative swing/hammock frame;
- private wash/cleanup;
- acoustic separation;
- lockable privacy vestibule.

DRAFT - NOT AS-BUILT

DRAFT — NOT AS-BUILT — LIVE CLOSEOUT GATES PENDING

inside without a key, tool or special knowledge, and no required exit route may pass through the suite. OSHA's exit route rule is a workplace standard rather than a residential design claim, but its core principles are prudent here: two remote routes where required, clear permanent paths, adequate headroom and doors that occupants can open from inside. OSHA 29 CFR 1910.36

The U.S. Access Board's lodging guidance emphasizes accessible routes and clear door openings within guest suites, as well as bathing, storage and communication features. Those ideas inform the Minecraft clearances and equal-quality guest rooms; this plan does not claim ADA compliance. U.S. Access Board, ADA Standards §224, Accessible Transient Lodging webinar

CDC public cleaning guidance supports appropriate soap/detergent cleaning and attention to high-touch surfaces. The suite therefore uses cleanable finishes, closed storage, a private wash area and a documented housekeeping reset, without pretending the room is a healthcare environment. CDC, When and How to Clean and Disinfect a Facility

---

## Existing objects and construction controls

Nine block entities occupy the current cottage: two chests, three barrels, two beds, one furnace, one lectern and one chiseled bookshelf. They and their NBT contents remain protected until a per-object move/preserve ledger assigns final rooms.

The terrain reservation has one water column and a raw `y65..83` height range; the high values are primarily the existing roof. New occupied floors target `y67/68`, with stepped stone plinths toward the west. No release may flatten the full reservation.

---

## Acceptance

The upgrade passes only if:

- both databases still agree on the complete steward-cottage inventory;
- the five-column east lane and 13-column north setback remain clear;
- all nine NBT objects are accounted for;
- office, household and private circulation do not conflict;
- the private suite is non-graphic, acoustically separated, privately washable and never part of egress;
- the patio and water court have safe continuous routes;
- exact-state rollback and matched evidence are complete.

DRAFT — NOT AS-BUILT — LIVE CLOSEOUT GATES PENDING

# Ravensreach Five-Citizen Life and Schedule Audit

Date: 2026-07-28 UTC
Observation window: through `2026-07-28T08:20:42Z`
Town: Ravensreach (`town_mrzgshth_9d12c17d`)
Citizens: Scott, Architect, Mason, Surveyor and Steward
Decision: **NOT READY FOR AUTONOMOUS DAILY-LIFE OR CROSS-CITY ACTIVATION**

---

## Executive finding

The five identities and town roles are now internally consistent, but the fleet does not yet have a believable daily life.

At the read-only audit point:

- all five bots were connected, healthy and fed, but every bot reported `IDLE`;
- `voyager.enabled` was `false`;
- Ravensreach was persisted and running as `paused`;
- the town's `config_json` contained only mayor and slider data, with no `citizenRoutine`;
- all five runtime leashes used the same home circle at `(-85,-370)`, rather than an individual residence;
- ScheduleManager had only one global day/night boundary and emitted work by role, not a per-resident timed itinerary;
- routine descriptions referred to shelters, a common hall, work sites and routes without exact configured locations;
- the latest blackboard held 76 tasks: 54 blocked, 16 pending, five completed and one claimed;
- only Mason, Surveyor and Steward had any completed town task in the retained board; Scott and Architect had none; and
- all four recorded live cross-city walk attempts failed. No reverse walk was completed.

The current paused/disabled state is therefore appropriate. It prevents an incomplete schedule and a failed cross-city route from being treated as a live routine. This report proposes source and configuration changes only; it does not authorize enabling either system.

---

## Current five-citizen state

| Citizen | Persisted role | Audit position | Retained town outcomes | Daily-life finding |
|---|---|---|---|---|
| Scott | lumberjack | `(-83,60,-427)` | 3 blocked, 0 completed | No configured home/bed, nursery or stockpile; below town elevation near the mine area. |
| Architect | builder | `(-121,68,-376)` | 5 blocked, 0 completed | Generic build and shelter jobs have no authorized work cell or exact destination. |
| Mason | miner | `(-49,68,-377)` | 7 blocked, 2 completed, 1 claimed | Some work succeeds, but the communal mine at `(-85,64,-440)` is outside the shared 50-block home circle and has no approved mine corridor/destination. |
| Surveyor | guard | `(-82,70,-2)` | 9 blocked, 2 completed | Stranded partway along the failed MainStreet walk; patrol text still has no exact checkpoint circuit. |
| Steward | farmer | `(-115,68,-340)` | 7 blocked, 1 completed | Only a shelter job completed; no exact crop beds, food store, compost or cottage route is configured. |

Identity is no longer the blocker: the live and persisted registers both contain Scott, Architect, Mason, Surveyor and Steward with the expected unique roles.

---

## Schedule and configuration audit

### ScheduleManager

`src/town/ScheduleManager.ts` currently:

- divides the entire day into only `day` and `night`;
- computes one open task per `(town, role, phase)`;
- maintains the next routine cursor only in memory;
- persists only `lastEmittedPhase`, not the routine cursor or resident itinerary;
- prepends every matching cross-city shift to its role schedule;
- has no resident name, start tick, end tick, duration, venue, route lock or return-trip state; and

- schedule emissions occur together on the TownBrain's 60-second tick.

This is useful role dispatch, but it is not a daily-life scheduler.

### TownManager and town configuration

`TownManager.updateTown()` shallow-merges arbitrary town configuration. `TownConfig.citizenRoutine.shifts` types a role, phase, activity and waypoint list, but there is no runtime validator for:

- known resident/role ownership;
- unique shift IDs;
- individual homes or venues;
- time windows;
- exact route/destination agreement;
- a return path;
- worksite permissions;
- live-walk acceptance state; or
- overlapping use of a narrow corridor.

The current Ravensreach database row has no `citizenRoutine`, despite the route migration audit reporting five proposed shifts. ScheduleManager therefore has no cross-city shift to emit.

### Runtime movement configuration

`config.yml` gives each bot:

- the same home center and 50-block radius;
- one MainStreet destination;
- one three-block-half-width two-dimensional corridor; and
- 14 two-dimensional waypoints.

The reviewed route proposal contains 19 three-dimensional routine waypoints. The current runtime leash omits the intermediate `z=0`, `20`, `45`, `60` and `75` vertices needed to express the changing surface elevation. The leash geometry is only horizontal, while the executable routine needs exact feet elevations.

The live route evidence remains failed:

| Evidence | Failure |
|---|---|
| `citizen-route-live-walk-20260728T075821Z.json` | Forward timeout at checkpoint 6. |
| `citizen-route-live-walk-20260728T081120Z.json` | Forward timeout at the first checkpoint. |
| `citizen-route-live-walk-20260728T081409Z.json` | Reached the long West Lane leg, then timed out approaching `(-82,65,81)` and stopped at `(-82,70,-2)`. |
| `citizen-route-live-walk-20260728T081735Z.json` | Could not stage from the stranded position to `(-82,73,0)`. |

No reverse result exists. The MainStreet employee lounge is still planned, so the present destination remains only `mainstreet-rear-staff-staging`.

---

## Exactly five behavioral improvements

### 1. Stagger a persisted itinerary per resident

**Behavioral outcome:** citizens start work, leisure and travel at deliberate, different times instead of receiving one simultaneous day/night burst.

**Code fix:**

- Replace the `(town, role, phase)` emission key with `(town, resident, routine-window)`.
- Extend the routine model with `botName`, `startTick`, `endTick`, `minimumDurationTicks`, `repeatEveryDays`, `priorityClass` and `maxLateStartTicks`.
- On each 60-second TownBrain tick, start at most one new resident routine and advance a persisted round-robin cursor. This provides a real minimum one-minute departure spacing.
- Persist `nextRoutineIndex`, `nextResidentIndex`, active routine ID, current step and last completion in `schedule.json`.
- Deduplicate by resident and routine ID, not only role keywords.

**Configuration fix:** define five stable offsets, one Minecraft minute apart:

| DRAFT — NOT AS-BUILT — LIVE CLOSEOUT GATES PENDING | |
|---|---|
| Architect | 0 ticks |
| Mason | 1,200 ticks |
| Scott | 2,400 ticks |
| Steward | 3,600 ticks |
| Surveyor | 4,800 ticks |

The ordering may change after route-capacity testing, but the offsets must remain distinct. `bots.joinStaggerMs` is not a substitute.

**Acceptance:** over two complete day/night cycles, no two routine-start events share a TownBrain tick, each resident receives work and non-work windows, and restart resumes the persisted cursor without replaying the first routine.

## 2. Give every citizen an exact home and complete home loop

**Behavioral outcome:** “rest,” “return home” and “leave for work” become real trips to an individual residence rather than semantic prompts.

**Code fix:**

- Add a resident-life registry with `residenceId`, exterior door, interior arrival, bed/rest anchor, safe waiting point and exact home-to-street waypoints.
- Add `home-bound`, `at-home` and `departing-home` routine states.
- A rest routine must walk home, enter, reach its own rest anchor, dwell, and exit through the same accepted route.
- Fail closed to the resident's safe waiting point when a home route is not post-state verified.

**Configuration fix:** replace the five shared “home” circles with five surveyed residence destinations and short home-to-civic-network corridors. Do not use the planned Manager Vale mini-mansions until those buildings have accepted post-state and interior walking evidence; survey the current usable shelters first.

**Acceptance:** each bot completes door-to-rest and rest-to-street walks in both directions, no bot uses another resident's home identity, and all five home routes remain within their leash geometry.

## 3. Require a verified worksite contract for productive work

**Behavioral outcome:** every citizen has believable work, while destructive jobs occur only where the world and permissions make them possible.

**Code fix:**

- Add `worksites` to the town routine model with object ID, role, entrance, exact route, bounds, allowed actions, prohibited actions, required inventory, verification snapshot and status.
- ScheduleManager emits a destructive work routine only when its worksite is `VERIFIED` and the requested action is allowlisted. Otherwise it emits the paired inspection/report routine.
- TownBrain's demand loop must consult the same worksite contract before producing wood, stone, food or ore jobs. It must not create generic exploration tasks for a resident when no reachable source is approved.
- Attach `worksite:<id>` and `routine:<id>` to every work task for exact cooldown and evidence accounting.

**Configuration fix:** survey and register:

- Architect: one non-destructive inspection circuit plus separately authorized build cells;
- Mason: a route/destination to the communal mine and a separate tool/stockpile inspection circuit;
- Scott: verified nursery, street-tree and lumber-stockpile zones;
- Steward: exact crop beds, kitchen store, irrigation and compost zones; and
- Surveyor: a finite checkpoint circuit, not a generated perimeter radius.

**Acceptance:** each resident completes its inspection contract; no uncontracted dig/place succeeds; and productive tasks are enabled one worksite at a time only after bidirectional route and object-bound checks pass.

## 4. Schedule real leisure and social overlap

**Behavioral outcome:** citizens spend identifiable time reading, eating, meeting and relaxing, with intentional overlap between peers rather than five independent “socialize briefly” prompts.

**Code fix:**

- Add a `venue` registry with entrance, interior seats, capacity, open window, exact route and accepted status.
- Add leisure routine steps: depart, arrive, claim a seat/activity anchor, dwell for a bounded interval, optional peer interaction, release the anchor and return home.
- Schedule staggered arrivals but overlapping dwell windows. Capacity reservations must prevent every bot selecting one block.
- Record leisure completion separately from work completion so the dashboard can prove a balanced life.

DRAFT - NOT AS-BUILT

- a common-hall meal/social window;
- an Architect reading/courtyard window;
- a Mason meal/tool-story window;
- a Scott trail/nursery leisure walk;
- a Steward kitchen/common-table window; and
- a Surveyor quiet checkpoint-report/reading window.

These can share venues, but each needs a distinct activity and return-home route. A venue name alone is insufficient.

**Acceptance:** during one full cycle every citizen completes at least one leisure routine, at least one venue hosts two or more residents with staggered arrival and overlapping dwell, and every participant returns home.

### 5. Make cross-city work an outbound/activity/return transaction

**Behavioral outcome:** MainStreet work is a complete commute with route ownership, progress recovery and guaranteed return—not a one-way list embedded in prose.

**Code fix:**

- Represent a shift as structured `outbound`, `activity`, `return` and `fallback` stages rather than one description string.
- Store the active waypoint index and resume from the last confirmed checkpoint after restart.
- Add a corridor occupancy lease. While the route retains seven two-wide chokes, only one citizen may be in the commute transaction at a time.
- Require exact three-dimensional routine waypoints even though the leash performs an additional horizontal corridor check.
- Block activation unless a named live-walk acceptance record proves staging, full forward walk, full reverse walk, no dig/tower and safe return.

**Configuration fix:**

- Do not restore the five database shifts yet.
- First correct the runtime route to the reviewed 19-point geometry and resolve the live obstruction around `z=-2..0`.
- Re-run a fresh same-moment offline survey and one complete live bidirectional walk.
- Then install one canary shift for Surveyor only. Add the other four roles one at a time after the prior role returns successfully.
- Keep the destination named `mainstreet-rear-staff-staging` until the lounge is built and accepted.

**Acceptance:** one citizen completes outbound, role activity and reverse return; the route lease releases; a second citizen can then complete the same transaction; and zero bot remains stranded outside its verified home network.

---

## Recommended implementation order

1. Implement the resident itinerary schema, validation and persisted cursor.
2. Survey and install existing home and local work/leisure routes.
3. Run a local-only canary cycle while retaining cross-city disablement.
4. Repair and accept the MainStreet bidirectional route.
5. Enable cross-city shifts one resident at a time behind the corridor lease.

---

## Verification suite to add with implementation

- `ScheduleManager` starts at most one resident routine per brain tick.
- Restart restores resident/window cursor and active route step.
- Unknown resident, role, venue, worksite or duplicate shift ID fails validation.
- Destructive work without a verified worksite becomes inspection work.
- Home routines contain exact outbound and reverse paths.
- Leisure arrivals are staggered while dwell windows overlap.
- Cross-city routine cannot start without a PASS live-walk ledger.
- Corridor lease excludes a second commuter until the first returns or enters a reviewed recovery state.
- The five-resident fixture rejects shared residence IDs and missing home anchors.
- One simulated full cycle gives each resident work, home and leisure completion without cross-role claims.

---

## Safety and truth boundary

This was a read-only audit. It did not change `config.yml`, `town.db`, `blackboard.json`, systemd state, bot queues, Minecraft blocks, citizen positions or the town-expansion generator.

DRAFT - NOT AS-BUILT

DRAFT — NOT AS-BUILT — LIVE CLOSEOUT GATES PENDING

until the corresponding local and route gates pass.

# Citizen route live-walk staging failure diagnosis

Status: **DIAGNOSED — PROPOSED REPAIR NOT APPLIED**

This report is read-only with respect to the Minecraft world, services, bot processes, databases, and configuration. It preserves the evidence needed before any live repair. No bot was started, moved, teleported, or instructed to dig; no service was restarted; and no live block was read or changed during this diagnosis.

## Finding

Surveyor is blocked by one low oak-leaf corner at the northbound road grade, not by an unreachable goal, missing chunk, civic-boundary rejection, or the accepted centerline itself.

The accepted offline survey is cardinal-only and has `parkour: false`. Its exact path follows the paved center around the failure:

```
(-82,67,-34) -> (-82,68,-33) -> (-82,68,-32) -> (-82,68,-31)
```

The production `mineflayer-pathfinder` model is different. With the installed 2.4.5 movement defaults, current fleet policy, `searchRadius=96`, no inventory scaffolding, and the configured three-block civic corridor, a read-only replay against immutable snapshot `7a6ae13857d598457491b970c4ece8fa29f3afbdc4d47aad6f076c7a69264f48` selects the outer grass shoulder:

```
... -> (-79,67,-34) -> (-79,68,-33) -> (-80,68,-32) -> ...
```

The diagonal from `(-79,68,-33)` to `(-80,68,-32)` cuts past `(-79,69,-32)`. That intermediate corner is `minecraft:oak_leaves[distance=3,persistent=false,waterlogged=false]` at the avatar's head height. The destination cell itself is clear.

`Movements.getMoveDiagonal` prices the two possible orthogonal sides and keeps only the cheaper one. Here the west-first side is clear, so the diagonal A* node has no `toBreak` action even though the north-first corner contains the leaf. Runtime control then faces the diagonal node and presses forward. Collision simulation cannot reach it, the controller withholds forward movement, and pathfinder emits `path_reset: stuck` after 3.5 seconds. This is the repeated live failure.

The restart log retains the more precise persisted position `(-78.6,68,-32.5)`. Its floored path node is `(-79,68,-33)`, exactly the reproduced pre-diagonal node. The public audit rounds that position to `(-79,68,-32)`.

## Evidence chain

| Evidence | SHA-256 | Relevant fact |
|---|---|---|
| `data/runtime-audits/citizen-route-live-walk-20260728T165823Z.json` | `8f808df6a3d577b1c636687686c76c0e080c4fc6fabfb0afd17b0f9e2c00aa5e` | Fresh-post route reached the later crown and failed in reverse; the route is not globally disconnected. |
| `data/runtime-audits/citizen-route-live-walk-20260728T171521Z.json` | `f32d9588c1010c02660d8339a4d75fffe039ec94c94aadf10827da63e215f18f` | Forward checkpoint 25 stopped at rounded `(-79,68,-32)` on both attempts. |
| `data/runtime-audits/citizen-route-live-walk-20260728T172625Z.json` | `312230535af3d571d76ac4738ea5a46d26782c93c2ba3c8e467f62f1bfa9eb60` | Fresh staging from the same position failed twice without moving. |
| `data/world-review/citizen-ravensreach-mainstreet-route-survey-livegate-20260728T1649Z.json` | `29722d87ff92a58487f00225cc3595827f6fa95cf32e3213e29396c5bade65f4` | Offline movement contract is cardinal-only, no-parkour, and proves the unobstructed x=-82 centerline. |
| `data/worldsnap-citizen-route-livegate-20260728T1649Z/region` | `7a6ae13857d598457491b970c4ece8fa29f3afbdc4d47aad6f076c7a69264f48` | Immutable physical source for the exact leaf and surrounding grade. |

Both failing audits preserve `digCountBefore=0`, `digCountAfter=0`, `noDigObserved=true`, and empty security incident arrays. Backend log PID `1342193` records the first stuck reset at 17:14:38, then the terminal position; PID `1345487` records the same resets at 17:25:23, 17:25:32, 17:25:40, and 17:25:48. The latter process spawned Surveyor at the precise persisted `(-78.6,68,-32.5)`.

## Bounded physical repair proposal

The proposed forward operation is exactly one source-guarded cell:

DRAFT — NOT AS-BUILT — LIVE CLOSEOUT GATES PENDING

Files:

- `data/buildops/citizen-route-live-walk-leaf-clearance-repair-2026-07-28.txt` — SHA-256 `9bc207d89c7243eccf50dfb1e1251c06411c85e1e1641c682afcae53792eb64b`
- `data/buildops/citizen-route-live-walk-leaf-clearance-repair-2026-07-28.rollback.txt` — SHA-256 `969fe369ca64d2bfcd9aeb9e92504ef6f6125039ee45e42fc07d778bb778700c`

The immutable-source preflight passed its only guard with zero failures:

- `data/world-review/citizen-route-live-walk-leaf-clearance-repair-preflight-20260728.json` — SHA-256 `1854b70c1be9a01b533b9ef60a294b355ba26b190cfdffcc335e4c203278c352`

The strict-noop parser-only dry run expanded exactly one Paper-strict `/fill` command with zero WorldEdit leftovers:

- `data/world-review/citizen-route-live-walk-leaf-clearance-repair-parser-dry-run-20260728.json` — SHA-256 `71a7f26f88ac5e3552532d3da3af4e47d17b8918880dd34b103b3e8bdf285065`

Projecting that one change over the immutable snapshot changes the production A* escape from:

```
(-79,68,-33) -> (-80,68,-32)
```

to:

```
(-79,68,-33) -> (-79,68,-32) -> (-80,68,-31)
```

The projected path reaches `GoalNear(-82,65,-19,1)` with no planned break or placement. The operation does not touch the accepted exact path, road surface, tree trunk, support block, or any block entity.

The network-free reproduction is `scripts/diagnose_citizen_route_staging_failure.mjs`; its focused regression is `test/scripts/citizenRouteStagingDiagnosis.test.ts`. The test passed all three cases: exact source diagonal reproduction, in-memory one-cell projection, and forward/rollback/preflight evidence integrity.

This is a proposal, not authorization to mutate the live world. Before a live execution:

1. Keep the town and citizen schedules paused and freeze world updates.
2. Capture a new immutable live-source snapshot.
3. Require the exact source guard above to match in that new snapshot and preserve the preflight report.
4. Require a fresh live entity-clearance gate for the one-cell target and its player collision volume.
5. Review both the forward operation and exact inverse.
6. If authorized, execute only through `scripts/rcon_runner.py --strict-noop --report <json>`.
7. Capture a new immutable post snapshot, rerun the offline route survey, and run the complete forward and reverse no-dig live walk. A staging-only pass is not acceptance.

---

# Code-level correction option

The broader mismatch is that the offline acceptance model declares cardinal-only movement with parkour disabled, while production movements retain `mineflayer-pathfinder` defaults that allow diagonals, parkour, and sprinting. Setting `movements.allowParkour = false` in `applyPathfinderMovementSafety` makes the same snapshot replay choose the clear x=-83 shoulder through this grade. It also removes the long-leg parkour nodes that pulled the default plan to x=-79.

That change is fleet-wide, so it is not the first-choice bounded repair for this incident. If selected, add a focused policy assertion and a snapshot-backed production-movement regression for both route directions, then run the full backend and citizen-fleet suites before rollout. Disabling parkour alone still does not make Mineflayer cardinal-only; claiming exact conformance would require a separate diagonal-move policy or a production-aware route verifier.

---

# Acceptance state

The citizen activation gate remains **FAIL**. The one-cell proposal has not been applied, and neither an offline projection nor a staging retry substitutes for a fresh bidirectional live walk against a matching post-repair snapshot.

DRAFT — NOT AS-BUILT — LIVE CLOSEOUT GATES PENDING

# Five-Bot Citizen Fleet Audit and Improvement Release

Date: 2026-07-28 UTC
Scope: Scott, Architect, Mason, Surveyor, Steward
Town: Ravensreach (`town_mrzgshth_9d12c17d`)

> **Superseding runtime note (13:12 UTC):** do not start the fleet from the activation described below. The Town Expansion package changes 262 of the 498 cells in this document's accepted walking trace when support and body clearance are included. The post-release route must be resurveyed, walked live in both directions, and atomically rebound to all five citizens first. Civic shifts are also now a version-2 outbound/inspection/return contract. See `docs/citizen-fleet/2026-07-28-five-bot-runtime-readiness-recheck.md`.

Release state: identity migration and the controlled corridor hold are complete; the corrective source pass, offline QA, and hash-bound live bidirectional walk are complete; the five-shift activation transaction passed. The service restart and post-release day/night observation remain gated.

---

## Executive decision

All five citizens were online and healthy at the audit point, but the fleet was not living as a coherent town. The principal constraints were not a lack of bots: they were an identity mismatch, repetitive task production, a 50-block circle that did not describe actual civic routes, generated-code API mismatch, and an unsafe worker replacement race.

This release implements the five code changes needed to address those causes. The first runtime-gate attempts then exposed four narrower integration gaps: `blockAt()` did not preserve block-state inspection, paused operation did not release stale claims, DungeonMaster could queue work that no resident was eligible to claim, and shift activation did not bind a walk result to the current route hashes. Those gaps are now fixed in source and covered by the current offline checks. The bounded stuck-recovery helper is compiled, and the production walk action completed the final controlled bidirectional audit.

It deliberately does not weaken protected-build mining rules, disable impersonation detection, or authorize arbitrary movement. The live database, blackboard, `config.yml`, and systemd services were inspected read-only during the corrective QA pass. A later guarded transaction performed the shift activation as one coordinated operation so no bot could load half-migrated state.

---

## Initial audit snapshot

Read-only API and database checks during the audit found:

- Five configured bots; all had health `20` and food `20`.
- All five Voyager histories had reached the 100-completed / roughly 49–50-failed display caps, indicating activity but also chronic retry churn.
- The persisted town resident is `Scout` while the connected bot is `Scott`. That prevents exact resident-role resolution, so Scott could claim work meant for other roles.
- Every configured leash was a radius-50 circle centered at `(-85,-370)`. The circle blocks legitimate patrol and commuting destinations but does not express a reviewed street or employee route.
- A moving read-only blackboard census observed 520 tasks: 484 blocked, 21 completed, 9 pending, and 6 claimed. Six simultaneous claims with five bots is consistent with the Steward worker-overlap incident and stale task state.
- The live resident rows were Architect/builder, Mason/miner, Surveyor/guard, Steward/farmer, and Scout/lumberjack.
- The live security API retained two Steward duplicate-login records. Log chronology shows a watchdog replacement race, not evidence sufficient to disable or bypass the impersonation system.

The census is a point-in-time reading. The live board continued to change while the audit ran; counts must be re-read immediately before the atomic migration.

---

## Current activation truth

The identity migration reconciled `Scout` to `Scott` while preserving the resident ID and lumberjack role. The current town database therefore has five exact alive residents: Architect/builder, Mason/miner, Scott/lumberjack, Steward/farmer, and Surveyor/guard.

DRAFT · NOT AS-BUILT

DRAFT — NOT AS-BUILT — LIVE CLOSEOUT GATES PENDING

guarded shift transaction installed the reviewed schedules, configured Voyager enabled, and resumed Ravenscrag. The transaction requires the systemd service to be stopped and does not start it; at this documentation point the service is inactive, so the new shifts have not yet begun their observation window.

The current offline route source of truth is:

- fresh accepted snapshot: `70eb7051d635d7558d3603e345e2b2d17d712607e92019363a12bbcc62267099`;
- exact 498-cell path: `c4e5924b91172a5c07c6b369cd196ce77c82df17bcc3abc08ff4e3adcd6c50b1`;
- 34 ordered three-dimensional checkpoints;
- 33/33 offline segments in each direction; and
- zero exact-path hazards, gravity supports, nearby block entities, building intersections, or mining-protection intersections.

The definitive audit, `data/runtime-audits/citizen-route-live-walk-20260728T092815Z.json`, is `PASS_BIDIRECTIONAL`. Surveyor passed 21 staging checkpoints, all 34 forward checkpoints, and all 34 reverse checkpoints. The protected-dig count remained zero and the security incident lists were empty before and after. Its snapshot and path hashes exactly match the accepted survey.

The final route uses a west-shoulder stair around the West Lane terrain lip. The production gate requested `GoalNear(range=1)` through a 45-second bounded action, with at most two attempts per checkpoint. Every checkpoint in the accepted run passed on attempt one, so the retry remained available but was not used. All earlier failed walk artifacts are superseded by this later hash-bound result.

---

# Per-bot findings

## Scott

Audit position: `(-83,60,-427)`; health/food `20/20`; empty inventory; 37 recorded deaths.

Scott was connected as an explorer but persisted as resident `Scout` with the lumberjack role. Because role resolution was exact-name-only, Scott behaved as unassigned and historically completed farmer, miner, builder, guard, and lumberjack town tasks. He was also below normal civic elevation and repeatedly selected long-distance iron exploration despite the leash.

Improvement: reconcile the unique `Scott`/`Scout` single-character identity drift immediately in code, migrate the persisted name atomically, and dispatch Scott only to lumberjack work, stockpile inspections, social routines, and reviewed civic shifts.

## Architect

Audit position: `(-121,68,-376)`; health/food `20/20`; six inventory stacks; 15 recorded deaths.

Architect repeatedly received “build or repair” and “rest until morning” jobs without a concrete authorized build cell, bed, or route. Critics then rejected the no-op result, causing retries rather than civic activity.

Improvement: alternate authorized builder work with non-destructive façade, road, stair, door, lighting, courtyard, and common-hall inspections. Physical edits still require an explicit protected-zone-safe build contract.

## Mason

Audit position: `(-48,68,-374)`; health/food `20/20`; two inventory stacks; 28 recorded deaths.

Logs show repeated pathfinder dig attempts against protected cells around `(-47,70,-370)`. Mason also repeatedly generated container code that expected `inspectContainer()` to return an array even though the sandbox returned an `ActionResult`.

Improvement: rotate failed mining families into a non-destructive mine-approach, tool-store, and stockpile inspection. Keep all dig protections. Expose the container collection contract advertised to generated code.

## Surveyor

Audit position: `(-64,82,-351)`; health/food `20/20`; empty inventory; four recorded deaths.

Surveyor’s generic perimeter patrol generated targets at 56–71 blocks from the common center, outside the radius-only leash. The bot therefore remained near one point or accumulated critic/pathfinding failures.

Improvement: use named checkpoints and surveyed waypoint corridors, alternate patrol with wayfinding/door/path inspection, and reject shortcuts outside the approved corridor.

## Steward

Audit position: approximately `(-111,68,-341)`; health/food `20/20`; empty inventory; 14 recorded deaths.

Steward’s crop skills called `bot.findBlocks`, but the generated-code sandbox did not expose that Mineflayer method. At 06:53:31 UTC, the watchdog found a 95,413 ms stale heartbeat and initiated replacement. At 06:53:36, the new worker started, then the old worker’s exit callback treated mutable `this.worker`/`this.ipc` as its own, cleared the replacement, and scheduled an additional restart. The overlapping login

DRAFT — NOT AS-BUILT — LIVE CLOSEOUT GATES PENDING

Improvement: provide `findBlocks` and `blockAt` with old/new learned-skill compatibility, bind all worker callbacks to a monotonic generation and captured IPC instance, coalesce concurrent restarts, and give new generations a watchdog startup grace. Genuine duplicate-login handling remains enabled.

---

# Five citizen-operation improvements

1. **Correct identity and role ownership.** Migrate `Scout` to `Scott` while preserving resident ID, join date, lumberjack role, and history. Use the narrow code fallback during deployment only; ambiguous names are rejected.
2. **Use a reviewed civic mobility network.** Retain each home circle, add named destination circles, and join them only with surveyed waypoint corridors. Movement outside these shapes stays blocked; out-of-bounds bots may only step closer to an approved area.
3. **Give citizens rotating daily lives.** Each role now alternates productive work with low-risk inspection, common-hall/social, reading, wayfinding, or return-home routines. Reviewed cross-city shifts may be appended through town config with exact waypoints and a non-destructive fallback.
4. **Stop impossible-job churn.** Only one active schedule task exists per town/phase/role. Exact failed families use exponential cooldown, and producers rotate to another useful routine instead of immediately recreating the same blocked row.
5. **Treat rollout as a measured shift.** After one coordinated restart, verify every bot's role, movement, work and leisure completion, protected-dig count, board growth, and Steward security behavior over a full day/night cycle before enabling the cross-city commute.

---

# Five code improvements delivered

1. `ResidentIdentity` implements exact matching followed by a unique one-character-substitution fallback. `BotManager` now uses it consistently for role, rules, and town ID resolution.
2. `BlackboardManager` stores `failureCount` and `retryAfter`, applies bounded exponential task-family backoff, and lets schedule/demand producers detect active cooldowns. `ScheduleManager` emits one active role routine and rotates among two or more entries.
3. `CivicMobility` implements home, destination, polyline-corridor, and recovery-distance geometry. The same check is enforced by both `CodeExecutor.moveTo` and the raw BotInstance pathfinder choke point.
4. The generated-code sandbox now supplies `bot.findBlocks`, returns `inspectContainer` as an item array, and preserves block-state inspection on `bot.blockAt`. Both block-returning paths expose block-style (`name`, `position`, `getProperties`) and legacy position-style (`x/y/z`, `offset`) fields so existing learned crop and safety skills remain compatible.
5. `WorkerHandle` captures worker/IPC/generation in every callback, ignores stale-generation notifications and exits, awaits forced termination, cancels obsolete restart timers, and coalesces concurrent forced restarts. `BotManager` skips non-running and startup-grace generations in watchdog recovery.

---

# Corrective runtime-gate pass

The follow-up source pass closes the defects found during the controlled hold:

1. **Crop block-state parity.** `CodeExecutor.blockAt()` now returns `getProperties`, `x/y/z`, `offset`, and `distanceTo` in the same safe shape as `findBlocks`. The regression test verifies a wheat `age` property.
2. **Hash-bound shift activation.** `apply_citizen_cross_city_route.mjs --phase shifts` now rejects a walk audit unless both `offlineAcceptedSnapshotSha256` and `exactPathSha256` equal the current accepted survey.
3. **Paused stale-claim release.** Global maintenance now invokes `releaseStale()` every minute before schedule and terminal GC, so a disabled Voyager or paused town cannot pin an abandoned claim indefinitely.
4. **Eligible DungeonMaster queuing.** Events remain available as world flavor, but unscoped roaming tasks are not queued when every connected worker is an alive town resident. When non-resident workers exist, identical open event tasks are deduplicated.
5. **Migration cleanup coverage.** Corridor holding now recognizes canonical `town:<id>` descriptions even when old task keywords omit the exact town ID, and removes the legacy impossible `Mine the new iron_ingot deposit` family from the controlled activation board.
6. **Bounded stuck recovery.** On a `path_reset: stuck`, the shared movement helper stops the stale path, faces the same approved goal, applies a 600-millisecond jump-forward nudge, clears both controls, and restores the exact `GoalNear`. Recoveries are rate-limited to one per two seconds and remain bounded by the original action timeout and civic step exclusion.

Items 1–6 are implemented source statements. The accepted live audit validates the hash-bound route action as a whole, but it does not independently prove that every corrective branch fired, and it is not a completed day/night citizen observation.

---

# Remaining runtime rollout

The identity migration, corridor hold, and live commute gate have already been recorded in timestamped runtime audits. The subsequent guarded shift transaction also passed: five exact shifts are persisted, Voyager is configured enabled, Ravensreach is resumed, and the audit is bound to the accepted walk. Do not repeat either execute phase.

2. Verify exactly five unique sessions and the Scott/lumberjack plus four other exact role assignments.
3. Observe the configured shifts through a full day/night cycle.
4. Recheck task-family churn, protected actions, worker overlap, and security.
5. Keep the planned employee lounge labeled planning-only until it has its own guarded build, post snapshot, and interior route proof.

After the operator starts the service, steps 2–4 are implemented as one fail-closed, read-only observation:

```
node scripts/audit_citizen_post_restart.mjs \
  --observe \
  --duration-minutes 45 \
  --minimum-minutes 20
```

The observer never mutates the API, service, databases, config, blackboard, or world. It pins the accepted route and persisted five-shift activation before sampling. It then requires one stable systemd PID, the five exact connected citizens and exact roles, an advancing Ravensreach brain, both schedule phases, two role-owned structured completions per citizen (the exact deterministic civic shift plus local work/life), sampled progress on the reviewed corridor, and zero protected-action, security, worker-replacement, or stuck-loop evidence. It writes timestamped paired JSON/Markdown evidence to `data/runtime-audits/`; any unmet condition is a `FAIL`, not an inconclusive success.

## Post-release verification matrix

| Gate | Evidence required | Pass condition |
|---|---|---|
| Fleet uniqueness | `/api/bots`, process list, login log | Exactly five bot handles and one Minecraft session per name |
| Identity | town resident API/DB | `Scott` has lumberjack role; no `Scout` resident remains |
| Role dispatch | current task history | Each role claims only its own explicit role contract |
| Routine rotation | one day and one night window | Every bot completes productive and non-destructive/social work; no exact failed task is immediately reissued |
| Mobility | matched route trace | Home, named destinations, and waypoint corridor work; off-corridor shortcut is rejected |
| Build safety | protected-zone log counter | No protected dig/place action succeeds; repeated Mason dig-error storm stops |
| Sandbox parity | Steward crop task and Mason container task | No `findBlocks is not a function`; no `*.find is not a function` on inspection result |
| Backlog | two blackboard censuses 30 minutes apart | Terminal archive retained externally; active board does not grow through duplicate failure families |
| Worker lifecycle | worker generation logs | A forced restart creates one replacement; stale exit is logged `current:false` and cannot schedule another |
| Security | impersonation API and quarantine state | Self-replacement produces no new incident; a real confirmed duplicate still quarantines and alerts |
| Cross-city route | accepted hash-bound 34-checkpoint audit | `PASS_BIDIRECTIONAL`, staging/forward/reverse PASS, zero dig delta, zero incidents |
| Cross-city shift | activated shift task and return result | Bot reaches the reviewed employee destination, performs non-destructive work, and returns along the same approved network |

## QA evidence

Completed offline:

- `npm run build` — PASS.
- Current focused citizen/route suite — 9 files, 44 tests, PASS. This includes four route-survey tests, two bounded stuck-recovery tests, and the new `blockAt().getProperties()` regression.
- All town and Voyager tests — 35 files, 242 tests, PASS.
- Full backend suite — 94 files / 665 tests passed; two failures in the unrelated in-progress Raven Rock T2b Wave 2 generator suite (`generateRavenRockT2bWave2.test.ts`) because that package currently exports 16 database features while its test requires at least 40. No citizen-fleet test failed.
- Real `config.yml` schema validation remains PASS.
- No live DB/config write, systemd restart, command queue, or Minecraft block mutation was initiated by this documentation/corrective QA pass.

## Release acceptance

Source status: **PASS**
Offline regression status: **PASS**
Identity migration status: **PASS**
Controlled corridor hold status: **PASS / RELEASED BY GUARDED SHIFT TRANSACTION**
Cross-city route status: **PASS OFFLINE ON FRESH 34-POINT SURVEY AND PASS_BIDIRECTIONAL LIVE**
Autonomous shift status: **CONFIGURED AND TOWN RESUMED; SYSTEMD SERVICE START AND DAY/NIGHT OBSERVATION PENDING**

The route and persisted shift gates are complete. The citizens should not be declared fully fixed until the service starts and the post-release day/night matrix passes.

DRAFT — NOT AS-BUILT — LIVE CLOSEOUT GATES PENDING

# Five-Bot Runtime Readiness Recheck

Generated: 2026-07-28 13:08 UTC
Citizens: Architect, Mason, Scott, Steward, Surveyor
Town: Ravensreach (`town_mrzgshth_9d12c17d`)
Decision: **SOURCE READY; LIVE ACTIVATION BLOCKED ON POST-RELEASE ROUTE REVALIDATION**

## Executive finding

The five citizens have exact identities, exact town roles, rotating work/life schedules, bounded mobility, task-family backoff, sandbox parity, and generation-safe worker ownership. Deterministic civic shifts do not depend on LLM availability. The persisted activation also contains five reviewed MainStreet shifts, Voyager is enabled, and Ravensreach is unpaused.

They are not currently running. `mc-fleet-bot.service` is intentionally inactive while the atomic Town Expansion release owns the world. No duplicate backend or Mineflayer process was present during this recheck.

This recheck found and fixed a material false-positive in the citizen release: the deterministic civic-shift executor walked only outbound, ignored its destination activity, and never returned to Ravensreach. The observer accepted 85 percent outward progress and therefore could not prove that a citizen worked at MainStreet and came home. Civic shifts are now a version-2, fail-closed contract: exact outbound path, observable non-destructive destination inspection, exact reverse path, and a home confirmation dwell. The observer now requires sampled departure, destination, and return for every citizen.

The in-flight Town Expansion package changes 262 of the 498 cells in the currently accepted walking trace when support and body-clearance cells are included. The old live route result is therefore historical evidence, not authorization to start the citizens after this release. The immutable post-release world must be resurveyed and walked in both directions before the five-shift activation is refreshed and systemd starts the fleet.

## Five behavior improvements

| Improvement | Current implementation | Evidence | Remaining live gate |
|---|---|---|---|
| 1. Exact identity and occupation | Scott/lumberjack, Architect/builder, Mason/miner, Steward/farmer, Surveyor/guard; no `Scout` resident | Read-only `town.db` query; resident-identity tests | Confirm the same five sessions and roles after systemd start |
| 2. Productive daily rotation | Every role alternates role work with non-destructive inspection; phase changes discard obsolete unclaimed work | `ScheduleManager`; role-dispatch/backoff tests | Each citizen must complete one role-owned local task |
| 3. Believable work/life rhythm | Day and night tables include work, shelter, common-hall, reading, courtyard, patrol, and social routines | Schedule table plus post-restart day/night gate | Observe both Minecraft phases and both fleet categories |
| 4. Work in MainStreet and return home | Each role owns one exact reviewed MainStreet shift; v2 executor travels out, visually inspects, reverses the route, and confirms home | Civic-shift unit tests; accepted pre-release bidirectional walk | Regenerate and live-walk the post-release route, then prove all five round trips |
| 5. Stop standing/stuck churn | One open schedule task per town/phase/role, exponential family backoff, stale-claim maintenance, no resident-ineligible DungeonMaster jobs, stationary-loop detection | Blackboard, global maintenance, observer, and worker tests | 20–45 minute read-only observer must show no repeated failure/stationary loop |

## Five code improvements

| Improvement | Implementation | Verification |
|---|---|---|
| 1. Resident identity resolution | Exact match first; only one globally unique one-character substitution is accepted | `ResidentIdentity.test.ts` 4/4 |
| 2. Role-owned rotating schedules and backoff | Structured `(town, phase, role)` tasks, exclusive role claims, duplicate suppression, phase cleanup, exponential retry delay | `BlackboardManager.roleDispatch.test.ts` 8/8 |
| 3. Civic mobility and round-trip execution | Home/destination/corridor enforcement at requested goal and intermediate path steps; LLM-independent v2 deterministic outbound/inspection/return executor | `CivicMobility.test.ts` 5/5; `CivicShiftCode.test.ts` 6/6; no-LLM executor 2/2 |
| 4. Generated-code sandbox parity | Container results are arrays; `findBlocks` / `blockAt` expose coordinate, distance, offset, and block-state APIs | `CitizenSandboxApis.test.ts` 4/4 |
| 5. Worker and global-task lifecycle safety | Monotonic worker generations, captured IPC ownership, restart coalescing, awaited termination, first-heartbeat startup aging, stale-claim GC, and resident-aware DungeonMaster suppression | `WorkerGeneration.test.ts` 3/3 plus source inspection |

DRAFT — NOT AS-BUILT

DRAFT — NOT AS-BUILT — LIVE CLOSEOUT GATES PENDING

missing provider or retry cannot silently turn an approved route into semantic free roaming. `voyager-loop.civicshift.noetic.test.ts` passes 2/2.

## Per-citizen cross-city assignment

| Citizen | Role | MainStreet assignment |
|---|---|---|
| Architect | builder | Inspect façades, road edges, doors, and lighting without block edits |
| Mason | miner | Inspect service-road condition and stockpile access without mining or moving inventory |
| Scott | lumberjack | Inspect street trees, planted edges, and woodwork without harvesting |
| Steward | farmer | Inspect landscape beds and staff food-service support without harvesting or planting |
| Surveyor | guard | Patrol rear staff staging without leaving the reviewed corridor |

All five shift activities are non-destructive. No task authorizes arbitrary roaming, digging, placing, inventory transfer, or a shortcut outside the reviewed civic boundary.

## Current persisted state

- `config.yml` SHA-256: `947caec8fdc197a9563bd93519195fa4dc5aeb754fba8f92553257992fe381f7`
- Voyager enabled: yes.
- Leash/corridor entries: five exact citizen names.
- Persisted shifts: five exact roles.
- Ravensreach paused: no.
- `town.db` integrity: `ok`.
- `world-map.db` integrity: `ok`.
- Fleet service: inactive/dead, MainPID 0, clean status.
- Duplicate bot backend/Mineflayer process: none observed.

## Route invalidation finding

Machine-readable evidence: `data/runtime-audits/citizen-route-town-expansion-intersection-20260728T130825Z.json`.

| Release scope | Exact old route cells touched |
|---|---|
| `TE-MSA-B01-GUEST-SERVICES-DESTINATION` | 140 |
| `TE-RAVENSREACH-MAINSTREET-STAFF-PATH` | 121 |
| `TE-MAINSTREET-EMPLOYEE-LOUNGE` | 1 |
| Total unique old route cells | 262 / 498 |

The vertical-class audit found 197 support, 86 feet, 22 head, and 22 second-head intersections. Material replacement can be benign, but a hash-bound route cannot assume that. The gate is deliberately binary: post-release resurvey and live bidirectional walk are required.

## Verification performed

- Full citizen/route/auditor suite: 13 files, 60 tests, all pass.
- Civic shift and observer subset after dynamic route-contract hardening: 3 files, 18 tests, all pass.
- Backend TypeScript build: pass.
- `git diff --check` on touched citizen files: pass.
- No service start/restart.
- No API mutation.
- No config/database/world mutation.

## Required release order

1. Finish or compensate the single atomic Town Expansion transaction.

3. Re-run the citizen route survey with the post-release snapshot as both the accepted and same-moment comparison input, require a fully hashed offline bidirectional pass.
4. Run the controlled live no-dig bidirectional walk on the regenerated route.
5. Apply the refreshed five leash and five shift contracts atomically from that exact passing audit.
6. Start `mc-fleet-bot.service` through systemd only.
7. Run `audit_citizen_post_restart.mjs --observe` for 45 minutes with a 20-minute minimum. Acceptance requires exactly five sessions, exact roles, an advancing town brain, day and night, one local success per citizen, exact destination-and-return evidence per citizen, zero protected action, zero security/worker incident, and zero stuck loop.

Until those gates pass, the correct statement is: the citizens are source-ready and deliberately offline, not yet proven autonomous in the post-release world.

# Citizen Fleet Post-Restart Observer Root-Cause Handoff

Date: 2026-07-28
Status: **FOLLOW-UP REQUIRED — DO NOT DEPLOY OR RESTART FROM THIS DOCUMENT**

---

## Executive result

The 20-minute post-restart observation failed after 121 samples over 1,200.001 seconds. The single systemd process, five identities, exact role ownership, connectivity, health, TownBrain activity, day/night coverage, and security gates all passed. Citizen behavior did not:

- Architect, Mason, Scott, and Steward completed no structured routines.
- Surveyor completed one local work routine.
- No local `life` routine completed.
- No citizen completed the reviewed cross-city round trip or produced destination-and-home evidence.
- Architect, Mason, and Surveyor spent roughly three minutes stationary on civic work; generic mining, crafting, shelter, and shortage failures repeated for the rest of the fleet.

Primary evidence:

- `data/runtime-audits/citizen-post-restart-observation-20260728T192509Z.json`
- `data/runtime-audits/citizen-post-restart-observation-20260728T192509Z.md`
- `data/runtime-audits/citizen-route-live-walk-20260728T185936Z.json`
- `data/runtime-audits/citizen-route-shifts-20260728T185952Z.json`
- `data/world-review/citizen-ravensreach-mainstreet-route-survey-terminal-20260728T1839Z.json`
- `/var/log/mc-fleet-bot.log`, especially the repeated `Approved civic shift outbound waypoint unreachable: -111,69,-332` events around lines 3,236,053–3,237,783 and 3,264,452–3,264,527.

The accepted common corridor remains valid and must not be relaxed:

- Immutable snapshot: `c39d0d67c9dec737aa5807cf5fa56a84f3c3d38d4b13d0f82599d3eb30fa6751`
- Exact 49-waypoint path: `9fe7e7bae1c2fde2243ee42a7322d2a8ac763042a9bc8eef69f44adce71ca701`
- Origin: `(-111,69,-332)`
- Contract: exact route, width 3, no digging, no placement, no tower, no parkour, no free roaming, and exact role ownership.

---

## Root causes

### 1. A cancelled path can poison the next movement goal

Both `CodeExecutor.moveTo` and `moveNearWithCleanup` call `mineflayer-pathfinder.stop()` during timeout/no-path cleanup. In the installed pathfinder, `stop()` sets a deferred `stopPathing` flag. The next `setGoal()` can consume that flag by clearing the newly assigned goal and immediately emitting `path_stop`.

The runtime trace matches this failure mode: each civic movement starts with an immediate `path_stop`, waits for its 45-second timeout, then arms the same condition for the next attempt. Fix cancellation centrally in project source; do not patch `node_modules`.

### 2. The reviewed corridor starts after the cottages

Version 2 civic code immediately moves from the citizen's current location to the common corridor origin. It has no reviewed cottage/home-to-origin leg. Observed starts were:

| Citizen | Observed position |
|---|---|
| Architect | `(-121,68,-376)` |
| Mason | `(-49,68,-377)` |
| Scott | `(-83,59,-426)` |
| Steward | `(-112,68,-346)` |
| Surveyor | `(-111,68,-350)` |

DRAFT - NOT AS-BUILT

by cottage geometry for multiple citizens. The 49-waypoint contract proves only common origin-to-MainStreet and back; it never proved five cottage egresses.

Nearest connected cells found during diagnosis are only **staging candidates**, not accepted approach contracts:

| Citizen | Candidate safe staging cell |
|---|---|
| Architect | `(-120,68,-377)` |
| Mason | `(-49,68,-381)` |
| Scott | `(-83,67,-428)` |
| Steward | `(-112,68,-351)` |
| Surveyor | `(-111,68,-351)` |

Do not hardcode these candidates. Generate, independently review, hash, and live-walk each full staging-to-origin connector first. Because several current entity cells are not traversable, activation may require one controlled, audited relocation to the accepted connector's first cell or a separately guarded physical cottage-egress repair.

### 3. Low-priority shifts lose to demand and generic work

The compiled version 2 shift is low priority and is followed by generic semantic schedules. Town demand is normal priority and runs before schedule work. Mason therefore repeats shortage work; Scott remains in wood/crafting chains; Steward repeats shelter or food work. Scott and Steward never claim a civic shift during the observer.

### 4. Autonomous recovery loses provenance

Failed blackboard work and generated prerequisites are inserted into `playerTaskQueue` without preserving source, town, role, or deterministic metadata. Later cycles report autonomous recovery as `player-request`, bypass normal resident selection/cooldown, and repeat generic tasks.

### 5. Generic local schedules are prose, not executable contracts

References to an approved hall, courtyard, mine route, or cottage path do not contain coordinates or an immutable path identity. Semantic generation then invents arbitrary targets, protected edits, disabled exploration, invalid API calls, or no-op successes. A successful work/life acceptance gate needs deterministic local routines on separately reviewed paths.

### 6. Failure accounting is incomplete

Several retry/replacement exits occur before the centralized failure outcome, blocker memory, and blackboard finalizer. Reaping a blocked shortage row can also erase the family failure lineage that should lengthen its backoff.

### 7. The observer misses real failures and conflates route legs

The observer's civic-failure expression does not match the actual `Approved civic shift outbound waypoint unreachable` wording. Deterministic selection evidence is currently derived only from a completed timeline, and `returnObserved` means return to the common route origin rather than return to the citizen's personal staging/home point.

---

## Rejected partial approach

A source-only experiment added version 3 task metadata with a reviewed `approach` and deterministic local task records. It was rejected and removed before build or deployment because it was not an atomic contract:

- `ScheduleManager` would emit civic version 3 while `CivicShiftCode` accepted only version 2.
- No executor existed for `local-routine` version 1.
- The five persisted shifts in `data/town.db` had no `approach`.
- The leash configuration had only the common 49-waypoint corridor.
- A producer-only deployment would either omit reviewed work or send it to semantic code generation.

No service restart, configuration change, town database change, blackboard change, entity relocation, or live-world mutation was performed during this diagnosis.

---

## Required atomic follow-up

Treat the next revision as one release unit. Do not restart between its pieces.

DRAFT — NOT AS-BUILT — LIVE CLOSEOUT GATES PENDING

cancel the next goal. Add a faithful deferred-stop regression: timeout/no-path immediately followed by a reachable goal must not emit `path_stop` for the successor.

2. Produce an immutable approach manifest for all five role/resident starts. Each approach needs its own stable ID, accepted snapshot SHA-256, normalized waypoint SHA-256, exact no-dig/no-place/no-parkour path, and an endpoint exactly equal to 49-waypoint origin zero.
3. Add the reviewed approach type to `src/town/Town.ts`, the version 3 producer to `src/town/ScheduleManager.ts`, and matching version 3 parsing/execution to `src/voyager/CivicShiftCode.ts`.
4. Make the deterministic transaction: personal staging → reviewed approach → unchanged 49-waypoint outbound route → bounded destination activity → exact 49-waypoint reverse route → exact reverse approach → personal staging/home confirmation.
5. Add deterministic local `work` and `life` routines using only reviewed local connectors and visible bounded actions. Add their executor before emitting their metadata.
6. In `src/voyager/VoyagerLoop.ts`, keep civic/local routines out of semantic skills and LLM generation, preserve source/role/town metadata through recovery, use one transaction attempt per deterministic failure, and route every exit through one failure finalizer with leg/index/coordinate evidence.
7. Give one civic routine per phase explicit precedence over demand, then rotate deterministically through local work and local life. Retain one-open-task deduplication, exact role ownership, and bounded family backoff. Preserve failure-family lineage independently of reaped task rows.
8. While the service is frozen, back up and atomically migrate: `config.yml` leash corridors, the five `data/town.db` shift contracts, and any controlled entity staging positions. Do not widen or replace the accepted 49-waypoint corridor.
9. Update `scripts/audit_citizen_post_restart.mjs` to report claimed, deterministic-selected, failed leg/index/coordinate, approach start, common-origin departure, destination, common-origin return, and personal home return separately. Match actual outbound/return failure messages.
10. Build and run focused tests before one controlled restart:

```
npx vitest run \
  test/control/CivicMobility.test.ts \
  test/town/ResidentIdentity.test.ts \
  test/voyager/CitizenSandboxApis.test.ts \
  test/voyager/CivicShiftCode.test.ts \
  test/voyager/VoyagerLoop.civicShiftNoLlm.test.ts \
  test/voyager/BlackboardManager.roleDispatch.test.ts \
  test/voyager/BlackboardManager.gc.test.ts \
  test/worker/WorkerGeneration.test.ts \
  test/config.schema.test.ts \
  test/scripts/auditCitizenPostRestart.test.ts
npm run build
```

11. After the atomic migration and restart, first live-walk each citizen's approach and return in isolation, then activate scheduling, then run a new full 20-minute observer. Acceptance requires exact route/home evidence, local work and life completions, no role theft, no protected action, no generic/player-request recovery leak, and no repeated stuck family.

---

# Release decision

The physical 49-waypoint common corridor is accepted. The resident lifecycle is not. Keep citizen lifecycle as a documented follow-up and do not allow it to block maps/media closeout, but do not describe the five-bot work/life system as accepted until the atomic follow-up passes.

DRAFT — NOT AS-BUILT — LIVE CLOSEOUT GATES PENDING

# Ravensreach–MainStreet Post-Release Commute Repair

Status: **PASS — OFFLINE ROUTE ONLY; LIVE GATES PENDING**

This repair is read-only with respect to Minecraft. It reads immutable Anvil snapshots and local configuration/database evidence. It did not connect a bot, write blocks, change the live configuration, start a service, or alter either database.

## Bound Evidence

- Accepted post-release snapshot: `1f036e48a82ccd5061e34686b049700e861b7a3bc99f69bd03ee3b1c1b2e463a`
- Diagnostic pre-release snapshot: `d749007d669b1f16a9d1a75dafd55d3bb92cbcc61ca49027f7337198da65865f`
- Canonical Town Expansion forward package: `1a10954b1ae6ae702dcc01cd92d39adbb3820e3feff5461f3caa1283a578b896`
- Offline exact route: 540 ordered cells, SHA-256 `9fe7e7bae1c2fde2243ee42a7322d2a8ac763042a9bc8eef69f44adce71ca701`
- Routine contract: 49 checkpoints and 48 bounded legs.
- Directional proof: all 48 forward and all 48 reverse legs pass.
- Movement limits: cardinal movement, adjacent elevation change at most one block, no swimming, digging, towering, parkour, or closed-door traversal.

## Why the Former Route Failed

Town Expansion occupied or changed four former civic-block checkpoint feet positions. Those four invalid checkpoints caused twelve directional segment failures because a blocked point is the prior segment's goal and the following segment's start.

| Former feet coordinate | Post-release feet | Head | Support | Standable |
|---|---|---|---|---|
| `-110,69,-317` | air | air | stone bricks | yes |
| `-94,69,-305` | stone bricks | air | dirt | no |
| `-74,69,-294` | stone bricks | air | grass block | no |
| `-63,69,-279` | cut sandstone | air | grass block | no |
| `-63,69,-261` | air | air | grass block | yes |
| `-81,69,-249` | calcite | calcite | calcite | no |
| `-81,65,-219` | air | air | polished andesite | yes |

The complete six forward and six reverse failure records, including `START_NOT_STANDABLE` and `GOAL_NOT_STANDABLE`, are persisted under `accepted.supersededRouteDiagnosis` in the JSON survey.

## Repaired Alignment

The replacement leaves Ravensreach at `-111,69,-332`, follows the new civic/service perimeter east to `-57,70,-310`, descends by normal one-block grades along `x=-57`, joins Service Cross at `-82,65,-219`, continues on West Lane, uses the reviewed grade doglegs around `z=0`, and terminates at the MainStreet rear staff staging point `-82,65,90`.

The accepted route has:

- zero exact-path water, lava, fire, or deadly-block hazards;
- zero gravity-block supports;
- zero nearby block entities;
- zero completed-building bounds intersections;
- zero mining-protected-zone intersections;
- minimum four clear vertical blocks, versus two required; and
- maximum adjacent elevation change of one block in both directions.

The physical-width audit found four chokes:

DRAFT — NOT AS-BUILT — LIVE CLOSEOUT GATES PENDING

| | |
|---|---|
| `-82,65,-206` | 2 |
| `-82,66,-158` | 2 |
| `-82,65,-110` | 2 |
| `-79,65,-79` | 1 |

One block is enough for the offline single-agent normal-walk model, so these cells do not invalidate the offline path. They are not treated as a desirable finished civic standard and are why this report does not authorize resident activation. The post-release map and direct perspective spot checks show the route using the civic perimeter, sidewalk/service lane, West Lane, and the designed grade stairs rather than passing through a completed building.

## Outputs

| Artifact | SHA-256 |
|---|---|
| `data/world-review/citizen-ravensreach-mainstreet-route-survey-2026-07-28.json` | `40930cbbcd5d93d74848d60f86749b90c12ebf5d7487ed184851642bb3666bf4` |
| `data/world-review/citizen-ravensreach-mainstreet-config-patch-proposal-2026-07-28.json` | `845b3a721f7128d19085fc409146a2b869afe50ac894601db65f497c0f22ba92` |
| `data/world-review/citizen-ravensreach-mainstreet-route-map-2026-07-28.png` | `ad1c3b8d80996a6c19220e56d3965b92b74b86be1c0bdb38947ad6385d8242e8` |
| `data/world-review/town-expansion-r1-citizen-route-qa-manifest-proposal-20260728.json` | `b0cbe4e2ef79e5fc54e23545cd642c56f634a981043233422aafa4a953c3ef15` |

The route-QA manifest is deliberately labeled `PROPOSED_NOT_LIVE_VERIFIED` and `completeForTownExpansionAcceptance: false`. It covers only this citizen commute. Final Town Expansion route acceptance still needs representative routes for the bunker, civic/guild/library, Westlight, data-center/Concord, and observatory/owner scopes.

## Tests

The focused citizen regression run passed 49 of 49 tests across nine files:

```
test/scripts/surveyCitizenCrossCityRoute.test.ts
test/control/CivicMobility.test.ts
test/town/ResidentIdentity.test.ts
test/voyager/CitizenSandboxApis.test.ts
test/voyager/CivicShiftCode.test.ts
test/voyager/VoyagerLoop.civicShiftNoLlm.test.ts
test/voyager/BlackboardManager.roleDispatch.test.ts
test/worker/WorkerGeneration.test.ts
test/config.schema.test.ts
```

`node --check scripts/survey_citizen_cross_city_route.mjs` also passed.

After activation tooling was rebound, the combined citizen/activation regression passed 65 of 65 tests across eleven files. The focused route, activation, and observer set passed 22 of 22 tests, and `npm run build` passed.

## Gates Still Required

1. Take a fresh same-moment saved-world snapshot immediately before activation.
2. Rerun the complete offline survey and require all forward and reverse legs to pass with the same no-dig/no-parkour policy.
3. Run a short-lived instrument over every checkpoint in both directions while recording movement controls and failures.
4. Review the four narrow cells, especially the one-wide point at `-79,65,-79`.
5. Only after those gates pass, atomically apply the five-bot mobility and civic-shift configuration and observe staggered departures and returns.

DRAFT — NOT AS-BUILT — LIVE CLOSEOUT GATES PENDING

## Activation tooling rebind

The activation, live-walk, and post-restart observer tools now share the fail-closed contract in `scripts/lib/citizen-route-contract.mjs`. The contract rejects any drift in the immutable post snapshot, exact-path hash or cell count, 49 checkpoints, 48 forward/reverse segments, acceptance class, headroom, movement policy, hazard/block-entity/protection counters, or the four declared width chokes. The diagnostic pre-release snapshot is explicitly required to differ; it is not an activation source.

Safe pre-activation checks while the service is stopped:

```
node scripts/apply_citizen_cross_city_route.mjs --phase corridor --dry-run
node scripts/run_citizen_route_live_walk.mjs --contract-check
```

Both checks passed without reading or mutating the live world. The corridor preview reports 49 checkpoints, 540 exact cells, four-block minimum headroom, and all four width chokes. Hash-before/hash-after regression coverage proves the dry-run leaves `config.yml`, `town.db`, `blackboard.json`, the route survey, and the proposal byte-identical.

The `shifts` phase remains separately gated. It accepts only a matching `PASS_BIDIRECTIONAL` audit with:

- the exact post snapshot, route hash, and acceptance class;
- all 49 forward and all 49 reverse checkpoint receipts;
- identical pre/post protected-dig counts;
- no pre-walk or post-walk security incident;
- the exact four-cell width-choke disclosure; and
- an exact passing staging trip.

An offline contract check or corridor dry-run cannot satisfy that live gate.

DRAFT · NOT AS-BUILT

DRAFT — NOT AS-BUILT — LIVE CLOSEOUT GATES PENDING

# Ravensreach–MainStreet Citizen Commute Survey

Date: 2026-07-28 UTC
Route ID: `RR-MSA-CITIZEN-COMMUTE-01`
Survey state: **PASS OFFLINE ON THE FRESH ACCEPTED SNAPSHOT AND PASS_BIDIRECTIONAL IN THE CONTROLLED LIVE WALK**

## Executive decision

An existing surface route can carry a citizen from the south edge of Ravensreach to MainStreet's rear staff staging area without digging, towering, swimming, parkour, entering a building footprint, crossing a configured mining protection box, or occupying a hazardous block.

The current source of truth is the fresh six-region snapshot captured for this route review:

| Snapshot | SHA-256 | Result |
|---|---|---|
| Fresh accepted citizen-route snapshot | `70eb7051d635d7558d3603e345e2b2d17d712607e92019363a12bbcc62267099` | 33/33 segments forward and 33/33 reverse |
| Accepted Wave 2 post-state comparison | `d05ac7822795eff03340e46695a6f3accbdffdf82d11559d857e17b4d1962999` | 33/33 segments forward and 33/33 reverse |

Both sources select the same exact 498-cell walk trace, SHA-256 `c4e5924b91172a5c07c6b369cd196ce77c82df17bcc3abc08ff4e3adcd6c50b1`. The annotated evidence map is `data/world-review/citizen-ravensreach-mainstreet-route-map-2026-07-28.png`; it is cropped from the accepted Wave 2 surface atlas and marks all checkpoints, two-wide chokes, the current destination circle, and the unbuilt lounge parcel.

This does not say the final employee greenway is built. The current route has seven two-wide choke cross-sections and is below the final five-block design target for 307 of its 498 cells. It is suitable for staggered citizen shifts, not a claim that the permanent paved, lit, five-block greenway is complete.

## Important survey correction

The earlier provisional coordinate schedule mixed support-block elevation and feet elevation. Its first seven `y=68` keyframes sit on solid ground and are not valid feet cells. The immutable snapshots show those reviewed checkpoints at feet `y=69`.

The corrected route below changes no world block. It corrects only the proposed navigation coordinates.

## Exact 3D citizen waypoints

The thirty-four checkpoints are the bounded pathfinder goals. The final west-shoulder stair uses single-step goals around the exposed West Lane terrain lip, then returns to the road grade south of the crest. The remaining West Lane checkpoints preserve the other grade changes that the earlier summaries compressed into long segments. The machine report also retains every one of the 498 exact walk cells between them.

| Sequence | X | Feet Y | Z | Route role |
|---|---|---|---|---|
| 1 | -111 | 69 | -332 | Ravensreach south staff origin |
| 2 | -110 | 69 | -317 | south departure |
| 3 | -94 | 69 | -305 | contour bend |
| 4 | -74 | 69 | -294 | southeast contour |
| 5 | -63 | 69 | -279 | east contour |
| 6 | -63 | 69 | -261 | south contour |
| 7 | -81 | 69 | -249 | MainStreet approach turn |
| 8 | -81 | 65 | -219 | graded Service Cross arrival |
| 9 | -82 | 65 | -219 | West Lane north endpoint |
| 10 | -82 | 65 | -119 | West Lane north grade checkpoint |
| 11 | -82 | 65 | -19 | West Lane mid-route grade checkpoint |

DRAFT — NOT AS-BUILT — LIVE CLOSEOUT GATES PENDING

| | | | | |
|---|---|---|---|---|
| 12 | -82 | 65 | -8 | West Lane contour entry |
| 13 | -81 | 66 | -7 | West Lane contour step 1 |
| 14 | -82 | 67 | -6 | West Lane contour step 2 |
| 15 | -81 | 68 | -5 | West Lane contour step 3 |
| 16 | -82 | 69 | -4 | West Lane contour step 4 |
| 17 | -81 | 70 | -3 | West Lane contour step 5 |
| 18 | -82 | 71 | -2 | West Lane contour step 6 |
| 19 | -83 | 72 | -1 | west-shoulder upper approach |
| 20 | -83 | 73 | 0 | west-shoulder stair crest |
| 21 | -83 | 72 | 1 | west-shoulder descent 1 |
| 22 | -83 | 71 | 2 | west-shoulder descent 2 |
| 23 | -82 | 70 | 3 | road-edge return |
| 24 | -82 | 69 | 4 | south contour step |
| 25 | -82 | 68 | 5 | south contour foot |
| 26 | -82 | 68 | 10 | low-grade run |
| 27 | -82 | 69 | 11 | Garden Cross approach |
| 28 | -82 | 70 | 20 | Garden Cross south grade |
| 29 | -82 | 71 | 45 | West Lane central grade |
| 30 | -82 | 70 | 60 | West Lane south approach |
| 31 | -82 | 70 | 75 | arrival-campus grade |
| 32 | -82 | 65 | 81 | South Cross descent |
| 33 | -82 | 65 | 85 | South Cross/rear-staff staging |
| 34 | -82 | 65 | 90 | planned future lounge door |

The civic-mobility proposal uses a three-block horizontal half-width around these centerline segments. The named destination circle is `mainstreet-rear-staff-staging`, centered at `(-82,85)` with radius eight. That circle includes both the safe current staging point and the planned future door at `(-82,90)`.

DRAFT · NOT AS-BUILT

## Bidirectional normal-walk evidence

The offline walker is intentionally conservative:

- cardinal movement only;
- two clear body blocks;
- safe solid footing;
- maximum adjacent elevation change of one;
- no swimming;
- no parkour;
- no digging;
- no towering;
- closed doors and gates are impassable; and
- every segment is confined to a three-block tube around its reviewed centerline.

| Segment | From → To | Forward cells | Reverse cells | Maximum step | Result |
|---|---|---|---|---|---|
| 1 | `(-111,69,-332)` → `(-110,69,-317)` | 17 | 17 | 1 | PASS |
| 2 | `(-110,69,-317)` → `(-94,69,-305)` | 29 | 29 | 1 | PASS |
| 3 | `(-94,69,-305)` → `(-74,69,-294)` | 32 | 32 | 0 | PASS |
| 4 | `(-74,69,-294)` → `(-63,69,-279)` | 27 | 27 | 1 | PASS |
| 5 | `(-63,69,-279)` → `(-63,69,-261)` | 19 | 19 | 1 | PASS |

DRAFT — NOT AS-BUILT — LIVE CLOSEOUT GATES PENDING

| | | | | | |
|---|---|---|---|---|---|
| 6 | `(-63,69,-261)` → `(-81,69,-249)` | 31 | 31 | 0 | PASS |
| 7 | `(-81,69,-249)` → `(-81,65,-219)` | 31 | 31 | 1 | PASS |
| 8 | `(-81,65,-219)` → `(-82,65,-219)` | 2 | 2 | 0 | PASS |
| 9 | `(-82,65,-219)` → `(-82,65,-119)` | 101 | 101 | 1 | PASS |
| 10 | `(-82,65,-119)` → `(-82,65,-19)` | 101 | 101 | 1 | PASS |
| 11 | `(-82,65,-19)` → `(-82,65,-8)` | 12 | 12 | 1 | PASS |
| 12 | `(-82,65,-8)` → `(-81,66,-7)` | 3 | 3 | 1 | PASS |
| 13 | `(-81,66,-7)` → `(-82,67,-6)` | 3 | 3 | 1 | PASS |
| 14 | `(-82,67,-6)` → `(-81,68,-5)` | 3 | 3 | 1 | PASS |
| 15 | `(-81,68,-5)` → `(-82,69,-4)` | 3 | 3 | 1 | PASS |
| 16 | `(-82,69,-4)` → `(-81,70,-3)` | 3 | 3 | 1 | PASS |
| 17 | `(-81,70,-3)` → `(-82,71,-2)` | 3 | 3 | 1 | PASS |
| 18 | `(-82,71,-2)` → `(-83,72,-1)` | 3 | 3 | 1 | PASS |
| 19 | `(-83,72,-1)` → `(-83,73,0)` | 2 | 2 | 1 | PASS |
| 20 | `(-83,73,0)` → `(-83,72,1)` | 2 | 2 | 1 | PASS |
| 21 | `(-83,72,1)` → `(-83,71,2)` | 2 | 2 | 1 | PASS |
| 22 | `(-83,71,2)` → `(-82,70,3)` | 3 | 3 | 1 | PASS |
| 23 | `(-82,70,3)` → `(-82,69,4)` | 2 | 2 | 1 | PASS |
| 24 | `(-82,69,4)` → `(-82,68,5)` | 2 | 2 | 1 | PASS |
| 25 | `(-82,68,5)` → `(-82,68,10)` | 6 | 6 | 0 | PASS |
| 26 | `(-82,68,10)` → `(-82,69,11)` | 2 | 2 | 1 | PASS |
| 27 | `(-82,69,11)` → `(-82,70,20)` | 10 | 10 | 1 | PASS |
| 28 | `(-82,70,20)` → `(-82,71,45)` | 26 | 26 | 1 | PASS |
| 29 | `(-82,71,45)` → `(-82,70,60)` | 16 | 16 | 1 | PASS |
| 30 | `(-82,70,60)` → `(-82,70,75)` | 16 | 16 | 1 | PASS |
| 31 | `(-82,70,75)` → `(-82,65,81)` | 7 | 7 | 1 | PASS |
| 32 | `(-82,65,81)` → `(-82,65,85)` | 5 | 5 | 0 | PASS |
| 33 | `(-82,65,85)` → `(-82,65,90)` | 6 | 6 | 0 | PASS |

DRAFT - NOT AS-BUILT

The exact forward and reverse traces, expanded-node counts, block states, and snapshot member hashes are in the machine report. This is stronger than a single flood-fill between endpoints: every pair of adjacent reviewed checkpoints is independently solved in each direction inside its own corridor.

---

# Live pathfinder validation and bounded action behavior

The definitive controlled audit is `data/runtime-audits/citizen-route-live-walk-20260728T092815Z.json`, SHA-256 `68f701830b37253877df19fea70d0ee2e03e63249bb93ef5262afd662afadb47`. Surveyor passed:

- 21/21 staging checkpoints from its prior location back to the route origin;
- 34/34 forward checkpoints;
- 34/34 reverse checkpoints;
- zero protected-dig count change (`0` before and `0` after); and
- zero security incidents before and after.

The result is `PASS_BIDIRECTIONAL`, and its accepted-snapshot and exact-path hashes exactly match this survey. The gate used the production walk action with `GoalNear(range=1)`, a 45-second bound per attempt, and at most two attempts per checkpoint. The accepted run needed no second attempts: all 89 staging, forward, and reverse checkpoint actions passed on attempt one.

The earlier failed audits targeted superseded route revisions. Their terrain-lip evidence informed the thirty-four-checkpoint west-shoulder stair; they do not override the later hash-bound pass.

- stop the stale path;
- face the exact reviewed goal;
- apply `jump + forward` for 600 milliseconds;
- clear both controls and restore the same `GoalNear`;
- suppress another recovery for at least two seconds; and
- remain inside the action's existing timeout and civic step-exclusion policy.

The recovery does not dig, tower, teleport, invent a waypoint, or expand the approved corridor. Its focused unit tests pass, and the production action stack completed the accepted bidirectional audit. The audit does not assert that the stuck hook fired; it establishes that the exact reviewed route works through the bounded `range=1` action and that the two-attempt retry remained available.

---

# Hazard and protection results

| Check | Result |
|---|---|
| Hazard blocks on exact path | 0 |
| Fluid/deadly blocks in two-block path halo | 0 |
| Gravity-block supports | 0 |
| Block entities within two blocks | 0 |
| Accepted building footprints crossed | 0 |
| Configured mining-protection boxes crossed | 0 |
| MainStreet guard-property cells | 443, movement only |
| MainStreet West Lane cells | 314 |

The route intentionally enters the guarded MainStreet property. This proposal authorizes movement only. It does not authorize breaking, placing, inventory access, or build work anywhere in that property.

The database reports a two-dimensional overlap with Raven Rock route `RR-C2` around z `-16..-8`. That underground route is at approximately y `-12..-18`; the citizen route is on the surface around y `64`. This is more than 75 blocks of vertical separation, not a physical intersection.

The route follows the accepted `R02 West Lane`, and crosses the accepted `R07`, `R06`, `R05`, and `R04` road junctions. Those are intended circulation relationships, not building conflicts.

---

# Width findings

The five-cell cross-section audit found:

- minimum contiguous standable width: two;
- seven two-wide points;
- 307 cells below the final five-block greenway target; and
- no point that blocks a single normal walker.

The seven narrow points are:

| X | Feet Y | Z |
|---|---|---|
| -82 | 65 | -206 |
| -82 | 66 | -158 |
| -82 | 65 | -110 |
| -82 | 64 | -62 |
| -82 | 67 | -38 |
| -82 | 64 | -14 |
| -82 | 70 | 34 |

Citizen departures should therefore be staggered until the permanent greenway is built and post-verified. No temporary construction schedule is required to unblock one-at-a-time commuting. Widening, paving, lighting, signing, and the employee lounge remain part of the coordinated town-expansion physical release.

DRAFT - NOT AS-BUILT

DRAFT — NOT AS-BUILT — LIVE CLOSEOUT GATES PENDING

## Destination truth

The current endpoint is safe natural/road-edge staging, not an employee lounge. The planned lounge remains:

- bounds: x `-94..-73`, y `64..76`, z `90..121`;
- planned path door: `(-82,65,90)`; and
- status: planned, not as-built in either surveyed snapshot.

Citizen task text must call the current destination `mainstreet-rear-staff-staging`. Rename it only after the lounge has a guarded transaction, accepted post snapshot, interior route proof, and database import.

---

# Five-role non-destructive shift proposal

The machine patch proposes one day shift for each exact town role:

| Role | MainStreet activity |
|---|---|
| Builder | façade, road-edge, door, and lighting inspection |
| Miner | service-road and material-stockpile-access inspection |
| Lumberjack | street-tree, planted-edge, and woodwork inspection |
| Farmer | landscape-bed and staff-food-service-support inspection |
| Guard | route and rear-staff-staging patrol |

All five shifts are `nonDestructive: true`. They contain the same thirty-four ordered 3D waypoints, with the reverse list recorded for return travel. The proposal updates all five leash entries—Architect, Mason, Scott, Steward, and Surveyor—with the same reviewed destination and corridor while preserving the existing Ravensreach home circle.

---

# Activation status and remaining gates

This documentation update does not write live config, town data, service state, or world blocks. The route and persisted shift transactions are complete:

- `citizen-route-corridor-20260728T092841Z.json` records the exact 34-waypoint corridor, five leash entries, and the controlled hold; its SHA-256 is `3869915e9243f0ea9e096329d1159f0d6c9f0e6eaeae620055a67d5e03c1e24d`;
- `citizen-route-shifts-20260728T092841Z.json` records five installed shifts, matching route hashes, Voyager configured enabled, and Ravensreach resumed; its SHA-256 is `f05e33431e32869e27116b86eb18160a1f88647b231c73c3d7e38eec7c460bde`; and
- both execute artifacts report `PASS`.

The maintenance transaction leaves `mc-fleet-bot.service` stopped by design. At the time of this documentation pass it is inactive, so runtime activation and observation are not yet complete. The remaining gates are:

1. start only the systemd-owned `mc-fleet-bot.service`;
2. verify exactly five unique connected citizens and their exact roles;
3. observe staggered shifts and return trips through a full day/night cycle;
4. require zero protected dig/place events, zero worker-overlap incidents, and no exact failed-task family churn; and
5. retain the final five-wide greenway/lounge package as a separate physical release with exact guards and rollback.

---

# Reproduction and artifacts

```
node scripts/survey_citizen_cross_city_route.mjs
npx vitest run test/scripts/surveyCitizenCrossCityRoute.test.ts
```

Artifacts:

- `scripts/survey_citizen_cross_city_route.mjs`
- `data/world-review/citizen-ravensreach-mainstreet-route-survey-2026-07-28.json`
- `data/world-review/citizen-ravensreach-mainstreet-config-patch-proposal-2026-07-28.json`

- `data/runtime-audits/citizen-route-live-walk-20260728T092815Z.json`
- `data/runtime-audits/citizen-route-corridor-20260728T092841Z.json`
- `data/runtime-audits/citizen-route-shifts-20260728T092841Z.json`

DRAFT — NOT AS-BUILT — LIVE CLOSEOUT GATES PENDING

Focused route-generator QA result: four tests passed. Bounded stuck-recovery QA adds two passing movement-helper tests. The merged five-bot leash proposal is accepted by the repository's real config validator. The definitive live artifact is hash-bound and reports `PASS_BIDIRECTIONAL`; the persisted shift transaction also passes. The systemd service restart and day/night observation remain separate gates.

DRAFT · NOT AS-BUILT

DRAFT — NOT AS-BUILT — LIVE CLOSEOUT GATES PENDING

# Engineering schedules, QA and database evidence

The exact file-level register contains 5108 artifacts across 9 evidence classes. The rows below isolate 415 machine-readable design schedules, frozen contracts, release reports, and closeout records. SHA-256 values bind the byte-exact source used by this dossier.
